Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the provisions of an Act entitled "An Act to authorize the Kansas and Arkansas Valley Railway to construct and operate additional lines of railway through the Indian Territory, and for other purposes," approved February twenty-fourth, eighteen hundred and ninety-one, be, and the same are hereby, extended for a period of three years from February twenty-fourth, eighteen hundred and ninety-four, so that said Kansas and Arkansas Valley Railway shall have until February twenty-fourth, eighteen hundred and ninety-seven, to build the first one hundred miles of its said additional lines of railway in said Territory.

Approved, June 6, 1894.

CHAP. 95.—An act granting the right of way to the Albany and Astoria Railroad Company through the Grand Ronde Indian Reservation, in the State of Oregon. June 6, 1894.

28 Stats., p. 87.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a right of way not exceeding one hundred feet in width and such additional width as may be required at any point on account of the formation of the ground for necessary cuts and fills through the Grand Ronde Indian Reservation, in the State of Oregon, shall be, and is hereby, granted to the Albany and Astoria Railroad Company, a corporation duly organized under the laws of the State of Oregon, or its assigns, according to the plans and surveys of the route to be filed in the Department and approved by the Secretary of the Interior; and said company shall also have the right to take from said lands adjacent to the line of said railroad, material, stone, earth, and timber necessary for the construction of said railroad; also ground adjacent to such right of way for station buildings, depots, machine shops, side tracks, turn-outs, and water stations, not to exceed in amount two hundred feet in width and three thousand feet in length for each station, to the extent of one station for each ten miles of road.

Albany and Astoria Railroad Company granted right of way through Grand Ronde Indian Reservation, Oreg.

Material.
Stations, etc.

SEC. 2. That it shall be the duty of the Secretary of the Interior to fix the amount of compensation to be paid to the Indians for such right of way, and provide the time and manner of payment thereof, and also to ascertain and fix the amount of compensation to be made to the individual members of the tribe for damages sustained by them by reason of the construction of said road; but no right of any kind shall vest in said company in or to any part of the right of way herein provided until plats thereof, made upon actual survey for the definite location of such railroad, and including the points for station buildings, depots, machine shops, side tracks, turn-outs, and water stations, shall be filed with and approved by the Secretary of the Interior, which approval shall be made in writing and be open to the inspection of any party interested therein, and until all compensation aforesaid has been fixed and paid; and the surveys, construction, and operation of such railroad, including the charges of transportation, shall be conducted with due regard for the rights of the Indians and in accordance with such rules and regulations as the Secretary of the Interior may make to carry out this provision: *Provided*, That the consent of the Indians to said right of way and compensation shall be obtained by said railroad company in such manner as the Secretary of the Interior shall prescribe before any right in this act shall accrue to said company.

Compensation.

Secretary of Interior to approve location, etc.

Proviso.
Consent of Indians.

SEC. 3. That whenever said right of way shall cease to be used for the purposes of the said railroad company, the same shall revert to the United States: *Provided, however*, That said company may be, and hereby is, granted three years to complete its railroad across said reservation after filing the maps of definite location thereof in the Department of the Interior.

Reversion.

Proviso.
Construction.

SEC. 4. That said railroad company shall accept this right of way upon the express condition, binding upon itself, its successors or assigns, that they will neither aid, advise, nor assist in any effort looking toward the changing or extinguishing of the present tenure of the Indians in their land, and will not attempt to secure from the Indian tribes any further grant of land or its occupancy than is hereinbefore provided.

Condition of acceptance.

SEC. 5. That any failure in the performance of the conditions required by this act shall be taken and deemed to be a forfeiture of all the rights and privileges herein granted, without any act of Congress or judgment of court declaring the same.

Forfeiture.

SEC. 6. That this act may be at any time altered, amended, or repealed by Congress.

Amendment, etc.

Approved, June 6, 1894.

June 27, 1894. CHAP. 117.—An act granting to the Eastern Nebraska and Gulf Railway Company right of way through the Omaha and Winnebago Indian reservations, in the State of Nebraska.
28 Stats., p. 95.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby granted to the Eastern Nebraska and Gulf Railway Company, a corporation organized and existing under and by virtue of the laws of the State of Nebraska, and its assigns, the right of way for the construction of its proposed railroad through the Omaha and Winnebago Indian reservations, in said State. Such right of way shall be fifty feet in width on each side of the central line of said railroad, and said company shall also have the right to take from the lands adjacent to the line of said road material, stones, and earth necessary for the construction of said railroad; also grounds adjacent to such right of way for station buildings, depots, machine shops, side tracks, turn-outs, and water station, not to exceed in amount two hundred feet in width and three thousand feet in length for each station, to the extent of two stations within the limits of said reservations.

SEC. 2. That before said railroad shall be constructed through any land, claim, or improvement held by individual occupants, according to any treaties or laws of the United States, compensation shall be made to such occupant or claimant for all property to be taken or damage done by reason of the construction of said railroad. In case of failure to make satisfactory settlement with any such claimant the just compensation shall be determined as provided for by the laws of the State of Nebraska enacted for the settlement of like controversies in such cases. The amount of damage resulting to the Omaha and Winnebago tribes of Indians in their tribal capacity by reason of the construction of said railroad through such lands of the reservation as are not occupied in severalty shall be ascertained and determined in such manner as the Secretary of the Interior may direct, and be subject to his final approval; but no right of any kind shall vest in said railway company in or to any part of the right of way herein provided for until plats thereof, made upon the actual survey for the definite location of such railroad, and including grounds for station buildings, depots, machine shops, side tracks, turn-outs, and water stations shall have been approved and filed with the Secretary of the Interior, and until the compensation aforesaid shall have been fixed and paid, and the consent of the Indians on said reservation to the provisions of this Act shall have been obtained in a manner satisfactory to the President of the United States. Said company is hereby authorized to enter upon such reservation for the purpose of surveying and locating its line of railroad: *Provided*, That said railroad shall be located, constructed, and operated with due regard to the rights of the Indians and the rules of the Secretary of the Interior: *Provided further*, That said railway company shall construct and maintain continually all fences, roads, and highways, crossings and necessary bridges over said railway whenever said roads and highways do now or may hereafter cross said railway's right of way or may be by the proper authorities laid out across the same: *Provided further*, That said railway shall be constructed through said reservations within three years after the passage of this Act, or the rights herein granted shall be forfeited as to that portion of the road not constructed.

SEC. 3. That Congress may at any time amend, alter, or repeal this Act, and the right of way hereby granted shall not be assigned or transferred in any form whatever, except as to mortgages or other liens that may be given or secured thereon to aid in the construction thereof.

Approved, June 27, 1894.

July 6, 1894. CHAP. 125.—An act granting to the Brainerd and Northern Minnesota Railway Company a right of way through the Leech Lake Indian Reservation in the State of Minnesota.
28 Stat., p. 99.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby granted to the Brainerd and Northern Minnesota Railway Company, a corporation organized and existing under the laws of the State of Minnesota, and to its assigns, the right of way for the extension of its railroad, with necessary side tracks and switch tracks, and for a telegraph and telephone line, through the Leech Lake Indian Reservation in said

State, commencing at a point in the south line of said Indian reservation and extending northwesterly through sections thirteen, twelve, one, and two, of township one hundred and forty-one, range thirty-one, to a point in the west line of said reservation in said section two, with the right to load logs on said railroad at the points in said reservation where the same may run adjacent or contiguous to the waters of Leech Lake. Such right of way shall be fifty feet in width on each side of the central line of said railroad, and said company shall also have the right to take from the lands adjacent to the line of said road material, stone, and earth necessary for the construction of said railroad; also grounds adjacent to such right of way for station buildings, depots, machineshops, side tracks, turn-outs, and water stations, not to exceed in amount two hundred feet in width and three thousand feet in length for each station, and to an extent not exceeding one station within the limits of said reservation: *Provided*, That no part of such lands herein granted shall be used except in such manner and for such purposes only as are necessary for the construction and convenient operation of said railroad line, and when any portion thereof shall cease to be used, such portion shall revert to the nation or tribe of Indians from which the same shall be taken.

Location.

Width, etc.

Stations, etc.

Proviso.
Use limited.

SEC. 2. That before said railroad shall be constructed through any land, claim, or improvement held by individual occupants according to any treaties or laws of the United States, compensation shall be made such occupant or claimant for all property to be taken or damage done by reason of the construction of said railroad. In case of failure to make satisfactory settlement with any such claimant, the United States district court at Saint Paul or Duluth, Minnesota, shall have jurisdiction upon petition of either party to determine such just compensation in accordance with the laws of Minnesota provided for determining the damage when property is taken for railroad purposes; and the amount of damages resulting to the tribe or tribes of Indians pertaining to said reservation in their tribal capacity, by reason of the construction of said railroad through such lands of the reservation as are not occupied in severalty, shall be ascertained and determined in such manner as the Secretary of the Interior may direct, and be subject to his final approval: *Provided, however*, That said railroad company may file with the Secretary of the Interior a bond, in such amount and with such sureties as the Secretary shall approve, conditioned for the payment of just compensation for said right of way to said individual occupants and to said tribe or tribes, as hereinbefore provided, and said company may thereupon proceed to construct and operate its railroad across said reservation.

Damages to individuals.

Damages to tribes.

Proviso.
Work may begin on filing bond.

SEC. 3. That said company shall cause maps, showing the route of its line through said reservation, and including the grounds for station buildings, depots, machine shops, side tracks, turn-outs, and water stations, to be filed in the office of the Secretary of the Interior before constructing any portion of said railroad.

Maps to be filed.

SEC. 4. That said company is hereby authorized to enter upon said reservation for the purpose of surveying and locating its line of railroad: *Provided*, That said railroad shall be located and constructed with due regard to the rights of the Indians, and under such rules and regulations as the Secretary of the Interior shall prescribe.

Survey.

Proviso.
Rights of Indians.

SEC. 5. That the right herein granted shall be forfeited by said company, unless the road shall be constructed through the said reservation within three years after the passage of this Act.

Construction.

Approved, July 6, 1894.

CHAP. 140.—An act granting to the Saint Paul, Minneapolis and Manitoba Railway Company the right of way through the White Earth, Leech Lake, Chippewa, and Fond du Lac Indian reservations in the State of Minnesota.

July 18, 1894.

28 Stat., p. 112.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby granted to the Saint Paul, Minneapolis and Manitoba Railway Company, a corporation organized and existing under the laws of the State of Minnesota, and its assigns, the right of way for the extension of its railroad through the White Earth, Leech Lake, Chippewa, and Fond du Lac Indian reservations in said State. Such right of way shall be fifty feet in width on each side of the central line of said railroad, with the right to use such additional ground where there are heavy cuts or fills as may be necessary for the construction and maintenance of the road.

Saint Paul, Minneapolis and Manitoba Railway Company granted right of way, White Earth, Leech Lake, Chippewa, and Fond du Lac Indian reservations, Minn.

Buildings, etc.	grounds adjacent to such right of way for station buildings, depots, machine shops, side tracks, turn-outs, and water stations, not to exceed in amount two hundred feet in width and three thousand feet in length for each station, to the extent of not exceeding two stations within the limits of each reservation: <i>Provided</i> , That no part of such
<i>Proviso.</i> Use limited.	lands herein granted shall be used except in such manner and for such purposes only as are necessary for the construction and convenient operation of said railroad line, and when any portion thereof shall cease to be used such portion shall revert to the tribe or band of Indians from which the same shall have been taken.
Damages to individuals.	SEC. 2. That before said railroad shall be constructed through any land, claim, or improvement held by individual occupants, according to any treaties or laws of the United States, compensation, subject to the approval of the Secretary of the Interior, shall be made to such occupant or claimant for all property to be taken or damage done by reason of the construction of said railroad. In case of failure to make satisfactory settlement with any such claimant, the just compensation shall be determined as provided for by the laws of Minnesota enacted for the settlement of like controversies in such cases. The amount of damages resulting to the tribes of Indians, in their tribal capacity, by reason of the construction of said railroad through such lands of the reservations as are not occupied in severalty, shall be ascertained and determined in such manner as the Secretary of the Interior may direct, and be subject to his final approval; but no right of any kind shall vest in said railway company in or to any part of the right of way herein provided for until plats thereof, made upon actual survey for the definite location of such railroad, and including grounds for station buildings, depots, machine shops, side tracks, turn-outs, and water stations, shall have been approved by the Secretary of the Interior, and until the compensation aforesaid shall have been fixed and paid. Said company is hereby authorized to enter upon such reservations for the purpose of surveying and locating its line of railroad: <i>Provided</i> , That said railroad shall be located, constructed, and operated with due regard to the rights of the Indians, and under such rules and regulations as the Secretary of the Interior shall prescribe.
Damages to tribes.	
Secretary of the Interior to approve plats, etc.	
Survey. <i>Proviso.</i> Rights of Indians.

CHAP 152.—An act granting to the Columbia Irrigation Company a right of way through the Yakima Indian Reservation, in Washington.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the right of way is hereby granted, as is hereinafter set forth, to the Columbia Irrigation Company, a corporation organized and existing under the laws of the State of Washington, for the construction of an irrigation canal through the Yakima Indian Reservation, from a point about one-half mile below where the Atahnam Creek empties into the Yakima River, on said reservation, in Yakima County, in the State of Washington; thence extending in a southerly direction, to a point where said canal crosses the Toppenish Creek; thence in a southeasterly direction, by the most practical route, to a point on the east boundary of said reservation, at or near section nineteen (19), township eight (8) north, range twenty-three (23) east of the Willamette meridian.

Location.

Use of water.

SEC. 2. That the said irrigation company shall have the right to appropriate and use any and all water necessary for their use from the Yakima River, not otherwise appropriated and in actual use at the time of the passage of this Act, or that may not be necessary for the domestic and irrigating purposes of any Indian to whom an allotment has been made, or shall hereafter be made, upon or along said Yakima River.

Storage reservoirs.

SEC. 3. That the said irrigation company is hereby granted sufficient land on said reservation for reservoirs for the storage of water to be used during the dry season, and for right of way connecting said

storage reservoirs with said irrigation canal, and shall have the right to locate, construct, and maintain the same under the same terms and restrictions provided herein for the right of way of said canal.

SEC. 4. That the right of way hereby granted to said company shall be seventy-five (75) feet in width on each side of the central line of said canal as aforesaid; and said company shall also have the right to take from said lands adjacent to the line of said canal material, stone, earth, and timber necessary for the construction of said canal.

SEC. 5. That it shall be the duty of the Secretary of the Interior to fix the amount of compensation to be paid individual members of the tribe for damages sustained by them by reason of the construction of said canal, and to provide the time and manner for the payment thereof; but no right of any kind shall vest in said irrigation company in or to any part of the right of way herein provided for until plats thereof made upon actual survey for the definite location of such canal shall be filed with and approved by the Secretary of the Interior, which approval shall be made in writing, and be open for the inspection of any party interested therein; and the survey, construction, and operation of such canal shall be conducted with due regard for the rights of the Indians, and in accordance with such rules and regulations as the Secretary of the Interior may make to carry out this provision.

SEC. 6. That said company shall not assign or transfer or mortgage this right of way for any purpose whatever until said canal shall be completed: *Provided*, That the company may mortgage said franchise for money to construct and complete said canal: *And provided further*, That the right herein granted shall be lost and forfeited by said company to any portion of said canal not completed within five years from the passage of this Act: *Provided further*, That one-fourth of said canal shall be completed in two years.

SEC. 7. That said irrigation company shall accept this right of way upon the express condition, binding upon itself, its successors, or assigns that they will not attempt to secure from the Indian tribe any further grant of land or its occupancy than is hereinbefore provided: *Provided*, That any violation of the conditions mentioned in this section shall operate as a forfeiture of all the rights and privileges of said irrigation company under this Act: *Provided further*, That the rights herein granted are upon the express condition that the grantee or grantees thereof shall at all times during the continuance thereof furnish the Indian allottees along said right of way with water sufficient for all domestic and agricultural purposes and purposes of irrigation, on such terms and under such rules and regulations as shall be prescribed by the Secretary of the Interior: *Provided further*, That Indians who have or may have allotments along said right of way shall have water for irrigation and domestic purposes free.

SEC. 8. The right to alter, amend, or repeal this Act is hereby expressly reserved.

CHAP. 215.—An act to grant to the Arkansas, Texas and Mexican Central Railway Company a right of way through the Indian Territory, and for other purposes.

August 4, 1894.
28 Stats., p. 229.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Arkansas, Texas and Mexican Central Railway Company, a corporation created under and by virtue of the laws of the State of Texas, be, and the same is hereby, invested and empowered with the right of locating, constructing, equipping, operating, using, and maintaining a railway, telegraph, and telephone line through the Indian Territory, beginning at a point to be selected by the said company on Red River north of the north boundary line of Montague County, in the State of Texas, and running thence by the most practicable route through the Indian Territory in a northeasterly direction to a point on the west boundary of the State of Arkansas.

Arkansas, Texas and Mexican Central Railway Company granted right of way, Indian Territory.

Location.

SEC. 2. That a right of way of one hundred feet in width through said Indian Territory is hereby granted to the Arkansas, Texas and Mexican Central Railway Company, and a strip of land two hundred feet in width, with a length of three thousand feet, in addition to the right of way, is granted for such stations as may be established, but such grant shall be allowed but once in every ten miles of the road, no

Width.

Stations.

<i>Provisos.</i> Limit to stations. Reversion for nonuser.	portion of which shall be sold or leased by the company, with the right to use such additional grounds where there are heavy cuts or fills as may be necessary for the construction and maintenance of the roadbed, not exceeding one hundred feet in width on each side of the said right of way, or as much thereof as may be included in said cut or fill: <i>Provided</i> , That no more than such addition of land shall be taken for any one station: <i>Provided further</i> , That no part of the lands herein granted shall be used except in such manner and for such purposes only as shall be necessary for the construction and convenient operation of said railway, telegraph, and telephone line, and when any portion thereof shall cease to be used such portion shall revert to the nation or tribes of Indians from which the same shall have been taken.
Damages to individuals.	SEC. 3. That before said railway shall be constructed through any lands held by individual occupants according to law, customs, and usages of any of the Indian nations or tribes through which it may be constructed full compensation shall be made to such occupants for all property to be taken or damage done by reason of the construction of such railway. In case of failure to make amicable settlement with any occupant, such compensation shall be determined by the appraisalment of three disinterested referees, to be appointed by the President of the United States, who, before entering upon the duties of their appointment, shall take and subscribe before competent authority an oath that they will faithfully and impartially discharge the duties of their appointment, which oath, duly certified, shall be returned with their award. In case the referees can not agree, then any two of them are authorized to make the award. Either party being dissatisfied with the finding of the referees shall have the right, within ninety days after the making of the award and notice of the same, to appeal by original petition to the courts, where the case shall be tried de novo. When proceedings have been commenced in court the railway company shall pay double the amount of the award into court to abide the judgment thereof, and then have the right to enter upon the property sought to be condemned and proceed with the construction of the railroad. Each of such referees shall receive for his services the sum of four dollars per day for each day they are engaged in the trial of any case submitted to them under this Act, with mileage at the rate of five cents per mile. Witnesses shall receive the usual fees allowed by the courts of said nations. Costs, including compensations of the referees, shall be made a part of the award and be paid by such railroad company.

freight charges.	
<i>Provisos.</i> Passenger charges. Regulations.	SEC. 4. That said railroad company shall not charge the inhabitants of said Territory a greater rate of freight than the rate authorized by the laws of the State of Texas for services or transportation of the same kind: <i>Provided</i> , That the passenger rates on said railroad shall not exceed three cents per mile. Congress hereby reserves the right to regulate the charges for freight and passengers on said railroad and messages on said telegraph and telephone lines until a State government or governments shall exist in said Territory, within the limits of which said railroad or part thereof shall be located, and then such State government or governments shall be authorized to fix and regulate the costs of transportation of persons and freight within their respective limits by said railway, but Congress expressly reserves the right to fix and regulate at all times the cost of all transportation by said railway or said company wherever such transportation shall extend from one State into another or shall extend into more than one State: <i>Provided, however</i> , That the rate of such transportation of passengers, local or interstate, shall not exceed those above expressed: <i>And provided further</i> , That said railway company shall carry the mail at such price as Congress may by law provide, and until such rate is fixed by law the Postmaster-General may fix the rate of compensation.
Maximum. Mails.	
Payment to tribes.	SEC. 5. That said railway company shall pay to the Secretary of the Interior, for the benefit of the particular nations or tribes through whose lands said railroad may be located, the sum of fifty dollars, in addition to compensation provided for by this Act for property taken or damaged by the construction of the railway, for each mile of railway that it may construct in said Territory, said payments to be made in installments of five hundred dollars as each ten miles of road is graded. Said company shall also pay, as long as said Territory is owned and occupied by the Indians, to the Secretary of the Interior, the sum of fifteen dollars per annum for each mile of railway it may
Annual rental.	

construct in said Territory. The money paid to the Secretary of the Interior under the provisions of this Act shall be apportioned by him in accordance with the laws and treaties now in force among the different nations and tribes, according to the number of miles of railway that may be constructed by said railway through their lands: *Provided*, That Congress shall have the right, so long as their lands are occupied and possessed by such nations and tribes, to impose such additional taxes upon said railroad as it may deem just and proper for their benefit: *Provided further*, That if the general counsel of either of the nations or tribes through whose lands said railway may be located shall, within four months after the filing of maps of definite location, as set forth in section six of this Act, dissent from the allowances provided for in this section and shall certify the same to the Secretary of the Interior, then all compensations to be paid to such dissenting nation or tribe under the provisions provided under this Act shall be determined as provided in section three for the determination of the compensation to be paid to the individual occupant of the land, with the right to appeal to the courts upon the same terms, conditions and requirements as herein provided: *Provided further*, That the amount awarded or adjudged to be paid by said railroad company for said dissenting nation or tribe shall be in lieu of the compensation that said nation or tribe would be entitled to receive under the provisions of this section. Nothing in this Act shall be construed to prohibit Congress from imposing taxes upon said railroad, nor any Territory or State hereafter formed through which said railway shall have been established from exercising the same power as to such part of said railway as may lie within its limits. Said railway shall have the right to survey and locate its railway immediately after the passage of this Act: *Provided further*, That if said right of way shall pass over or through any land allotted to an Indian in accordance with any law or treaty, it shall be the duty of the Secretary of the Interior to provide for obtaining the consent of such allottee or allottees to said right of way and to fix the amount of compensation to be paid such allottees for right of way and for damages sustained by them by reason of the construction of the road; but no right of any kind shall vest in said railway company to any portion of said right of way passing over or through any such allotted lands until the compensation herein provided for shall be fixed and paid.

Apportioning receipts.

SEC. 6. That said railway company shall cause maps showing the route of its located line through said Territory to be filed in the office of the Secretary of the Interior, and also to be filed in the office of the principal chief of each of the nations or tribes through whose lands said railway may be located; and after the filing of said maps no claim for subsequent settlement and improvement of right of way shown by said maps shall be valid as against said company: *Provided*, That when a map showing any portions of said railway company's located line is filed as herein provided for, said company shall commence grading said located line within six months thereafter, or such location shall be void as to any occupant thereof.

Maps to be filed.

Proviso.

Grading to begin on filing maps.

SEC. 7. That the officers, servants, and employees of said company necessary to the construction, operation, and management of said railway and telegraph and telephone lines shall be allowed to reside, while so engaged, upon the right of way, but subject to the provisions of the Indian intercourse laws, and such rules and regulations as may be established by the Secretary of the Interior in accordance with such intercourse laws.

Employees may reside on right of way.

SEC. 8. That the United States circuit and district courts for the northern district of Texas, the western district of Arkansas, the district of Kansas, and such other courts as may be authorized by Congress, shall have, without reference to the amount in controversy, concurrent jurisdiction over all controversies arising between the said Arkansas, Texas and Mexican Central Railway Company and the nations and tribes through whose territory such railway shall be constructed. Said courts shall have like jurisdiction, without reference to the amount in controversy, over all controversies arising between the inhabitants of said nations or tribes and said railway company, and the civil jurisdiction of said courts is hereby extended within the limits of said Indian Territory, without distinction as to citizenship of the parties, so far as may be necessary to carry out the provisions of this Act.

Litigation.

Commencement and completion.	SEC. 9. That said railway company shall build at least one hundred miles of its railway in said Territory within three years after the passage of this Act, or this grant shall be forfeited as to that portion not built; that said railway company shall construct and maintain continually all road and highway crossings and necessary bridges over said railway wherever said roads and highways do now or may hereafter cross said railway's right of way or may be by the proper authorities laid out across the same.
Condition of acceptance.	SEC. 10. That said Arkansas, Texas and Mexican Central Railway Company shall accept this right of way upon express conditions, binding upon itself, its successors, and assigns, that they will neither aid, advise, nor assist toward any effort looking to the changing or extinguishing the present tenure of the Indians in their lands, and will not attempt to secure from the Indians any further grant of land or its occupancy than herein provided: <i>Provided</i> , That any violation
<i>Proviso.</i> Violation to forfeit.	of the conditions named in this section shall operate as a forfeiture of all the rights and privileges of said railway company under this Act.
Record of mortgages.	SEC. 11. That all mortgages executed by said railway company, conveying any portion of its railroad with its franchises that may be constructed in the Indian Territory, shall be recorded to the Department of the Interior, and the record thereof shall be evidence and notice of their execution, and shall convey all rights and property of said company as therein expressed.
Amendment, etc.	SEC. 12. That Congress may at any time amend, add to, or alter or repeal this Act.

Approved, August 4, 1894.

August 11, 1894. CHAP. 255.—An act extending the time of payment to purchasers of lands of the Omaha tribe of Indians in Nebraska, and for other purposes.
28 Stat., p. 276.

Omaha Indian Reservation. Time for paying for lands extended. Vol. 22, p. 341.	<i>Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled</i> , That the Secretary of the Interior be, and he is hereby, authorized and directed to extend the time of payments of the purchase money due for land sold on the Omaha Indian Reservation under the sale made by virtue of "An Act to provide for the sale of a part of the reservation of the Omaha tribe of Indians in the State of Nebraska, and for other purposes," approved August seventh, eighteen hundred and eighty-two, as follows:
Extending time for first payments, etc.	The time for the first payment is hereby extended until the first day of December, eighteen hundred and ninety-seven, the second payment to become due in one year thereafter, and the third payment to be due and payable in one year from the time fixed for the second payment:
<i>Provisos.</i> Interest. Fund for benefit of Indians.	<i>Provided</i> , That the interest on said payments shall be paid annually at the time said payments of interest are due; and the Secretary of the Treasury shall retain in the Treasury all moneys heretofore and that may hereafter be paid as principal under the Act approved August seventh, eighteen hundred and eighty-two, and shall pay over five per centum thereon annually to the Secretary of the Interior to be expended by him annually for the benefit of said Indians, as prescribed in section three of said Act, and the Secretary of the Treasury shall pay all interest that has been paid on land sold under said Act to the Secretary of the Interior, to be by him paid over to said tribe, to be distributed to the members thereof pro rata by the agent of said tribe, and all interest thereafter coming into the Treasury shall be paid over and distributed to said tribe annually in like manner: <i>Provided, however</i> , That the interest of the purchaser in lands on which the payment of the purchase money is hereby extended shall be subject to taxation in the State in which they are situated, but any lien created thereby shall be subject to the lien of the United States for the unpaid purchase money, but this Act shall be of no force and effect until the consent thereto of the Omaha Indians shall be obtained in such manner and under such regulations as the Secretary of the Interior may prescribe: <i>And provided</i> , That the said Act of August seventh, eighteen hundred and eighty-two, except as changed or modified by this Act, shall remain in full force and effect.
Distribution of interest.	
Taxation of lands.	
Prior act to remain in effect.	

Approved, August 11, 1894.

CHAP. 290.—An act making appropriations for current and contingent expenses of the Indian Department and fulfilling treaty stipulations with various Indian tribes for the fiscal year ending June thirtieth, eighteen hundred and ninety-five, and for other purposes. August 15, 1894. 28 Stat., p. 286.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums be, and they are hereby, appropriated, out of any money in the Treasury not otherwise appropriated, for the purpose of paying the current and contingent expenses of the Indian Department for the year ending June thirtieth, eighteen hundred and ninety-five, and fulfilling treaty stipulations with the various Indian tribes, namely:

Indian Department appropriations.

* * * * * [28 Stat., p. 289.]

CHIPPEWAS IN MINNESOTA.

Chippewas in Minnesota.

This amount as advance interest to the Chippewa Indians in Minnesota, as required by section seven of "An Act for the relief and civilization of the Chippewa Indians in the State of Minnesota," approved January fourteenth, eighteen hundred and eighty-nine, to be expended under the direction of the Secretary of the Interior in the manner required by said Act, reimburseable, ninety thousand dollars; Advance interest. Vol. 25, p. 645.

To enable the Commissioner of Indian Affairs, under the direction of the Secretary of the Interior, to carry out the provisions of the same Act, namely, the purchase of material and employment of labor for the erection of houses for Indians, for the purchase of agricultural implements, stock, and seeds, breaking and fencing land; for payment of expenses of delegations of Chippewa Indians to visit the White Earth Reservation; for the erection and maintenance of day and industrial schools; for subsistence and for pay of employees, for pay of commissioners and their expenses; and for removal of Indians and for their allotments, to be reimbursed to the United States out of the proceeds of sale of their lands, fifty thousand dollars; For civilization, etc.

Removal, etc.

For completing the necessary surveys within the Chippewa Indian Reservation, in Minnesota, including expenses of examining and appraising pine lands, under the provisions of the said Act, to be reimbursed to the United States out of the proceeds of the sale of their lands, twenty-five thousand dollars; in all, one hundred and sixty-five thousand dollars. Surveys.

CHIPPEWAS OF FOND DU LAC.

Chippewas of Fond du Lac.

This amount to be expended under the direction of the Secretary of the Interior, for the benefit of the Fond du Lac Indians of the State of Minnesota, being the sum recovered by the United States in compromise of suits against certain parties for timber depredations upon the Fond du Lac Reservation in Minnesota, and which sum has been deposited in the United States Treasury as a miscellaneous receipt, four thousand three hundred dollars. Timber depredations.

POTTAWATOMIES OF INDIANA AND MICHIGAN.

Pottawatomies, Indiana and Michigan.

For this amount due certain Pottawatomie Indians of Indiana and Michigan, being their proportion (two thousand and eighty-one dollars and thirty cents) of the perpetual annuities (twenty-two thousand three hundred dollars) due the Pottawatomie Nation under various treaties, for the years ending June thirtieth, eighteen hundred and ninety-three, June thirtieth, eighteen hundred and ninety-four, and June thirtieth, eighteen hundred and ninety-five, as ascertained by the judgment of the Supreme Court of the United States pronounced in the case of the Pottawatomie Indians of Michigan and Indiana against the United States, on the seventeenth day of April, eighteen hundred and ninety-three, and which annuities were not embraced in the judgment aforesaid, six thousand two hundred and forty-three dollars and ninety cents. Annuities due under Supreme Court judgment. Post, p. 450.

Citizen Band,
Pottawatomies.

CITIZEN BAND OF POTTAWATOMIES.

Vol. 26, p. 1016. That the Secretary of the Interior be, and he hereby is, authorized and directed to pay to the Citizen Band of Pottawatomie Indians, or expend for their benefit, the sum of thirteen thousand nine hundred and eighty-one dollars and fifty-eight cents, now on the books of the Treasury, and being the unexpended balance of the appropriation to carry out the provisions of the agreement between the United States and said band of Indians, ratified and confirmed by Act of Congress approved March third, eighteen hundred and ninety-one: *Provided*, That any member of the Citizen Band of Pottawatomie Indians and of the Absentee Shawnee Indians of Oklahoma, to whom a trust patent has been issued under the provisions of the Act approved February eight, eighteen hundred and eighty-seven (Twenty-fourth Statutes, three hundred and eighty-eight), and being over twenty-one years of age, may sell and convey any portion of the land covered by such patent in excess of eighty acres, the deed of conveyance to be subject to approval by the Secretary of the Interior under such rules and regulations as he may prescribe, and that any Citizen Pottawatomie not residing upon his allotment, but being a legal resident of another State or Territory, may in like manner sell and convey all the land covered by said patent, and that upon the approval of such deed by the Secretary of the Interior the title to the land thereby conveyed shall vest in the grantee therein named. And the land sold and conveyed under the provisions of this Act shall, upon proper recording of the deeds therefor, be subject to taxation as other lands in said Territory, but neither the lands covered by such patents not sold and conveyed under the provisions of this Act, nor any improvements made thereon, shall be subject to taxation in any manner by the Territorial or local authorities during the period in which said lands shall be held in trust by the United States.

EASTERN SHAWNEES.

Eastern Shawnees.

This amount to be paid per capita to the Eastern Shawnees, under the direction of the Secretary of the Interior, and now to their credit in the United States Treasury, being the residue of the sum due by the United States to said Indians for cession of lands under the third article of the treaty entered into by said band with the United States, proclaimed October fourteenth, eighteen hundred and sixty-eight, nine thousand and seventy-nine dollars and twelve cents.

Per capita.

Vol. 15, p. 514.

That the Secretary of the Interior be, and hereby is authorized to make a thorough investigation of the facts touching the so-called Ogden Land Company, its organization, when and by whom formed, its continued existence or organization to this date, its capital stock, number of shares, amount or face value, where and by whom held, its liabilities and assets, and the original history of the alleged claim of said company to any of the lands of the Seneca Nation of Indians in the State of New York, and any and all evidences of title; and also the condition of said Indians, their progress in civilization and fitness for citizenship, their number and system of government, and the propriety of allotting their lands in severalty, and to make to Congress a full report with such suggestions and recommendations as he may deem proper in view of all the facts ascertained.

[28 Stats., p. 301.]

Ogden Land Company. Investigation directed.

Whereas there is due the Wyandotte Indians from the Government of the United States, as ascertained and reported by the Commissioner of Indian Affairs in his letter to the Secretary of the Interior of February seventeenth, eighteen hundred and ninety-four, a balance of fifteen thousand six hundred and eighty-six dollars and eighty cents; and

Wyandottes.

Whereas there are absentee Wyandotte Indians, who are poor and homeless, numbering between one hundred and fifty and two hundred persons, and for whom no provision has been made:

Therefore, the Secretary of the Interior is hereby authorized and directed to purchase for said absentee Wyandotte Indians eighty acres of land per capita, or so much thereof as said sum of fifteen thousand six hundred and eighty-six dollars and eighty cents will purchase, at a sum not to exceed one dollar and fifty cents per acre; such lands to be purchased from the Quapaw Indians in the Indian Territory, or, if this be found impracticable, then such lands shall be purchased of other Indians in the Indian Territory, where the land may be most conveniently and advantageously obtained by the Secretary of the Interior; said lands to be taken in allotments, as provided for in the severalty Act of Congress of February, eighteen hundred and eighty-seven, and amendments thereto. And the said sum of fifteen thousand six hundred and eighty-six dollars and eighty cents, so due to said Wyandotte Indians, is hereby appropriated out of any moneys in the Treasury not otherwise appropriated, for the purpose of making the purchase of the lands herein and hereby provided for.

Purchase of land for use of absentees.

Allotments. Vol. 24, p. 388.

[28 Stats., p. 302.] For support and civilization of the Apache and other Indians in Arizona and New Mexico who have been or may be collected on reservations in New Mexico and Arizona, one hundred and eighty-five thousand dollars: *Provided*, That the Secretary of the Interior is hereby authorized, under such rules and regulations as he may deem proper and necessary to protect the interests of the Indians and of the United States, to sell or otherwise dispose of a quantity of timber, not exceeding twenty thousand dollars in value, on the Jicarilla Apache Indian Reservation, the proceeds to be used by him in the purchase of sheep and goats for the benefit of the Indians belonging thereto as will best tend to promote their welfare and advance them in civilization.

MISCELLANEOUS.

* * * * *

Allotments. Vol. 24, p. 388. To enable the President to cause, under the provisions of the Act of February eighth, eighteen hundred and eighty-seven, entitled "An Act to provide for the allotment of lands in severalty to Indians," such Indian reservations as in his judgment are advantageous for agricultural and grazing purposes to be surveyed, or resurveyed, for the purposes of said Act, and to complete the allotment of the same, including the necessary clerical work incident thereto in the field and in the Office of Indian Affairs, and delivery of trust patents, so far as allotments shall have been selected under said act, thirty thousand dollars: *Provided*, That whenever it shall be made to appear to the Secretary of the Interior that by reason of age, disability or inability, any allottee of Indian lands under this or former Acts of Congress, can not personally and with benefit to himself, occupy or improve his allotment or any part thereof the same may be leased upon such terms, regulations, and conditions as shall be prescribed by the Secretary for a term not exceeding five years for farming or grazing purposes, or ten years for mining or business purposes: *Provided further*, That the surplus lands of any tribe may be leased for farming purposes by the council of such tribe under the same rules and regulations and for the same term of years as is now allowed in the case of leases for grazing purposes.

Provisos.
Leases permitted. Leases of surplus lands by tribes. That all persons who are in whole or in part of Indian blood or descent who are entitled to an allotment of land under any law of Congress, or who claim to be so entitled to land under any allotment Act or under any grant made by Congress, or who claim to have been unlawfully denied or excluded from any allotment or any parcel of land to which they claim to be lawfully entitled by virtue of any Act of Congress, may commence and prosecute or defend any action, suit, or proceeding in relation to their right thereto, in the proper circuit court of the United States. And said circuit courts are hereby given jurisdiction to try and determine any action, suit, or proceeding arising within their respective jurisdictions, involving the right of any person, in whole or in part of Indian blood or descent, to any allotment of land under any law or treaty. And the judgment or decree of any such court in favor of any claimant to an allotment of land shall have the same effect, when properly certified to the Secretary of the Interior, as if such allotment had been allowed and approved by him; but this provision shall not apply to any lands now held by either of the Five Civilized Tribes nor to any of the lands within the Quapaw Indian Agency: *Provided*, That the right of appeal shall be allowed to either party as in other cases.

Judgments.

Lands excepted. *Proviso.*
Appeal.

For the construction, purchase, and use of irrigating machinery and appliances on Indian reservations, in the discretion of the Secretary of the Interior and subject to his control, thirty thousand dollars.

Irrigation.

The Secretary of the Interior is directed to contract with responsible parties for the construction of irrigating canals and the purchase or securing of water supply on the Fort Hall Indian Reservation, in the State of Idaho, for the purpose of irrigating the lands of said reservation: *Provided*, That the expense of constructing said canals and the purchase or securing of water supply shall be paid out of moneys belonging to the said Fort Hall Indians now in the Treasury of the United States and subject to the disposal of the Secretary of the Interior for the benefit of said Indians.

Fort Hall, Idaho.

[28 Stats., p. 314.]

AGREEMENT WITH THE YANKTON SIOUX OR DAKOTA INDIANS, IN SOUTH DAKOTA.

Agreement with Yankton Sioux, in South Dakota, ratified.

SEC. 12. The following agreement, made by J. C. Adams and John J. Cole, commissioners on the part of the United States, with the chiefs, headmen, and other male adults of the Yankton tribe of Sioux or Dakota Indians upon the Yankton Reservation, in the State of South Dakota, on the thirty-first day of December, eighteen hundred and ninety-two, and now on file in the Department of the Interior, and signed by said commissioners on behalf of the United States, and by

Charles Martin, Edgar Lee, Charles Jones, Isaac Hepikigan, Stephen Cloud Elk, Edward Yellow Bird, Iron Lingthing, Eli Brockway, Alex Brunot Francis Willard, Louis Shunk, Joseph Caje, Albion Hitika, John Selwyn, Charles Ree, Joseph Cook, Brigham Young, William Highrock, Frank Felix, and Philip Ree, on behalf of the said Yankton tribe of Sioux Indians, is hereby accepted, ratified, and confirmed.

ARTICLES OF AGREEMENT.

Whereas J. C. Adams and John J. Cole, duly appointed commissioners on the part of the United States, did, on the thirty-first day of December, eighteen hundred and ninety-two, conclude an agreement with the chiefs, headmen, and other male adults of the Yankton tribe of Sioux or Dacotah Indians upon the Yankton Reservation, in the State of South Dakota, which said agreement is as follows:

Commission-
ers.

Whereas a clause in the act making appropriations for the current and contingent expenses of the Indian Department, and for fulfilling treaty stipulations with various Indian tribes, for the fiscal year ending June thirtieth (30th), eighteen hundred and ninety-three (1893), and for other purposes, approved July 13th, 1892, authorizes the "Secretary of the Interior to negotiate with any Indians for the surrender of portions of their respective reservations, any agreement thus negotiated being subject to subsequent ratification by Congress;" and

Vol. 27, p. 633.

Whereas the Yankton tribe of Dacotah—now spelled Dakota and so spelled in this agreement—or Sioux Indians is willing to dispose of a portion of the land set apart and reserved to said tribe, by the first article of the treaty of April (19th) nineteenth, eighteen hundred and fifty-eight (1858), between said tribe and the United States, and situated in the State of South Dakota:

Now, therefore, this agreement made and entered into in pursuance of the provisions of the act of Congress approved July thirteenth (13th), eighteen hundred and ninety-two (1892), at the Yankton Indian Agency, South Dakota, by J. C. Adams of Webster, S. D., John J. Cole of St. Louis, Mo., and I. W. French of the State of Neb., on the part of the United States, duly authorized and empowered thereto, and the chiefs, headmen, and other male adult members of said Yankton tribe of Indians, witnesseth:

ARTICLE I.

The Yankton tribe of Dakota or Sioux Indians hereby cede, sell, relinquish, and convey to the United States all their claim, right, title, and interest in and to all the unallotted lands within the limits of the reservation set apart to said Indians as aforesaid.

Unallotted
lands ceded.

ARTICLE II.

In consideration for the lands ceded, sold, relinquished, and conveyed to the United States as aforesaid, the United States stipulates and agrees to pay to the said Yankton tribe of Sioux Indians the sum of six hundred thousand dollars (\$600,000), as hereinbefore provided for.

Consideration.

ARTICLE III.

SECTION 1. Sixty days after the ratification of this agreement by Congress, or at the time of the first interest payment, the United States shall pay to the said Yankton tribe of Sioux Indians, in lawful money of the United States, out of the principal sum stipulated in Article II, the sum of one hundred thousand dollars (\$100,000), to be divided among the members of the tribe per capita. No interest shall be paid by the United States on this one hundred thousand dollars (\$100,000).

Cash payment
per capita.

SECTION 2. The remainder of the purchase money or principal sum stipulated in Article II, amounting to five hundred thousand dollars (\$500,000), shall constitute a fund for the benefit of the said tribe, which shall be placed in the Treasury of the United States to the credit of the said Yankton tribe of Sioux Indians, upon which the United States shall pay interest at the rate of five percentum (5) per annum from January first, eighteen hundred and ninety-three (January 1st, 1893), the interest to be paid and used as hereinafter provided for.

Fund.

Interest.

ARTICLE IV.

Payment of
fund.

The fund of five hundred thousand dollars (\$500,000) of the principal sum, placed to the credit of the Yankton tribe of Sioux Indians, as provided for in Article III, shall be payable at the pleasure of the United States after twenty-five years, in lawful money of the United States. But during the trust period of twenty-five years, if the necessities of the Indians shall require it, the United States may pay such part of the principal sum as the Secretary of the Interior may recommend, not exceeding \$20,000 in any one year. At the payment of such sum it shall be deducted from the principal sum in the Treasury, and the United States shall thereafter pay interest on the remainder.

ARTICLE V.

Distribution of
interest.

SECTION 1. Out of the interest due to the Yankton tribe of Sioux Indians by the stipulations of Article III, the United States may set aside and use for the benefit of the tribe, in such manner as the Secretary of the Interior shall determine, as follows: For the care and maintenance of such orphans, and aged, infirm, or other helpless persons of the Yankton tribe of Sioux Indians, as may be unable to take care of themselves; for schools and educational purposes for the said tribe; and for courts of justice and other local institutions for the benefit of said tribe, such sum of money annually as may be necessary for these purposes, with the help of Congress herein stipulated, which sum shall not exceed six thousand dollars (\$6,000) in any one year: *Provided*, That Congress shall appropriate, for the same purposes, and during the same time, out of any money not belonging to the Yankton Indians, an amount equal to or greater than the sum set aside from the interest due to the Indians as above provided for.

Proviso.
Equal amount
to be appro-
priated.

Distribution of
fund when title
of allottees is
completed.

SECTION 2. When the Yankton tribe of Sioux Indians shall have received from the United States a complete title to their allotted lands, and shall have assumed all the duties and responsibilities of citizenship, so that the fund provided for in section 1 of this article is no longer needed for the purposes therein named, any balance on hand shall be disposed of for the benefit of the tribe as the Secretary of the Interior shall determine.

ARTICLE VI.

Per capita dis-
tribution.

After disposing of the sum provided for in Article V, the remainder of the interest due on the purchase money as stipulated in Article III shall be paid to the Yankton tribe of Sioux Indians semiannually, one-half on the thirtieth day of June and one-half on the thirty-first day of December of each year, in lawful money of the United States, and divided among them per capita. The first interest payment being made on June 30th, 1893, if this agreement shall have been ratified.

ARTICLE VII.

Coins to adult
males.

In addition to the stipulations in the preceding articles, upon the ratification of this agreement by Congress, the United States shall pay to the Yankton tribe of Sioux Indians as follows: To each person whose name is signed to this agreement and to each other male member of the tribe who is eighteen years old or older at the date of this agreement, twenty dollars (\$20) in one double eagle, struck in the year 1892 as a memorial of this agreement. If coins of the date named are not in the Treasury coins of another date may be substituted therefor. The payment provided for in this article shall not apply upon the principle sum stipulated in Article II, nor upon the interest thereon stipulated in Article III, but shall be in addition thereto.

ARTICLE VIII.

Buildings, etc.

Such part of the surplus lands hereby ceded and sold to the United States, as may now be occupied by the United States for agency, schools, and other purposes, shall be reserved from sale to settlers until they are no longer required for such purposes. But all other lands included in this sale shall, immediately after the ratification of this agreement by Congress, be offered for sale through the proper

land office, to be disposed of under the existing land laws of the United States, to actual and bona fide settlers only.

ARTICLE IX.

During the trust period of twenty-five years, such part of the lands which have been allotted to members of the Yankton tribe of Indians in severalty, as the owner thereof can not cultivate or otherwise use advantageously, may be leased for one or more years at a time. But such leasing shall be subject to the approval of the Yankton Indian agent by and with the consent of the Commissioner of Indian Affairs; and provided that such leasing shall not in any case interfere with the cultivation of the allotted lands by the owner thereof to the full extent of the ability of such owner to improve and cultivate his holdings. The intent of this provision is to compel every owner of allotted lands to cultivate the same to the full extent of his ability to do so, before he shall have the privilege of leasing any part thereof, and then he shall have the right to lease only such surplus of his holdings as he is wholly unable to cultivate or use advantageously. This provision shall apply alike to both sexes, and to all ages, parents acting for their children who are under their control, and the Yankton Indian agent acting for minor orphans who have no guardians. Leases permitted.

ARTICLE X.

Any religious society, or other organization now occupying under proper authority for religious or educational work among the Indians any of the land under this agreement ceded to the United States, shall have the right for two years from the date of the ratification of this agreement within which to purchase the land so occupied at a valuation fixed by the Secretary of the Interior, which shall not be less than the average price paid to the Indians for these surplus lands. Lands for religious uses.

ARTICLE XI.

If any member of the Yankton tribe of Sioux Indians shall within twenty-five years die without heirs, his or her property, real and personal, including allotted lands, shall be sold under the direction of the Secretary of the Interior, and the proceeds thereof shall be added to the fund provided for in Article V for schools and other purposes. Lands of Indians dying without heirs.

ARTICLE XII.

No part of the principal or interest stipulated to be paid to the Yankton tribe of Sioux Indians, under the provisions of this agreement, shall be subject to the payment of debts, claims, judgments, or demands against said Indians for damages or depredations claimed to have been committed prior to the signing of this agreement. Prior depredations not to be deducted

ARTICLE XIII.

All persons who have been allotted lands on the reservation described in this agreement and who are now recognized as members of the Yankton tribe of Sioux Indians, including mixed-bloods, whether their white blood comes from the paternal or maternal side, and the children born to them, shall enjoy the undisturbed and peaceable possession of their allotted lands, and shall be entitled to all the rights and privileges of the tribe enjoyed by full-blood Indians. Tribal rights.

ARTICLE XIV.

All allotments of lands in severalty to members of the Yankton tribe of Sioux Indians, not yet confirmed by the Government, shall be confirmed as speedily as possible, correcting any errors in same, and Congress shall never pass any act alienating any part of these allotted lands from the Indians. Allotments to be confirmed.

ARTICLE XV.

Payment of scouts. The claim of fifty-one Yankton Sioux Indians, who were employed as scouts by General Alf. Sully in 1864, for additional compensation at the rate of two hundred and twenty-five dollars (\$225) each, aggregating the sum of eleven thousand four hundred and seventy-five dollars (\$11,475) is hereby recognized as just, and within ninety days (90) after the ratification of this agreement by Congress the same shall be paid in lawful money of the United States to the said scouts or to their heirs.

ARTICLE XVI.

Pipestone Reservation. If the Government of the United States questions the ownership of the Pipestone Reservation by the Yankton Tribe of Sioux Indians, under the treaty of April 19th, 1858, including the fee to the land as well as the right to work the quarries, the Secretary of the Interior shall as speedily as possible refer the matter to the Supreme Court of the United States, to be decided by that tribunal. And the United States shall furnish, without cost to the Yankton Indians, at least one competent attorney to represent the interests of the tribe before the court.

Title to be adjudicated.

If the Secretary of the Interior shall not, within one year after the ratification of this agreement by Congress, refer the question of the ownership of the said Pipestone Reservation to the Supreme Court, as provided for above, such failure upon his part shall be construed as, and shall be, a waiver by the United States of all rights to the ownership of the said Pipestone Reservation, and the same shall thereafter be solely the property of the Yankton tribe of the Sioux Indians, including the fee to the land.

ARTICLE XVII.

Intoxicants prohibited.

No intoxicating liquors nor other intoxicants shall ever be sold or given away upon any of the lands by this agreement ceded and sold to the United States, nor upon any other lands within or comprising the reservations of the Yankton Sioux or Dakota Indians as described in the treaty between the said Indians and the United States, dated April 19th, 1858, and as afterwards surveyed and set off to the said Indians. The penalty for the violation of this provision shall be such as Congress may prescribe in the act ratifying this agreement.

ARTICLE XVIII.

Former treaty in force.
Vol. 11, p. 318.

Nothing in this agreement shall be construed to abrogate the treaty of April 19th, 1858, between the Yankton tribe of Sioux Indians and the United States. And after the signing of this agreement, and its ratification by Congress, all provisions of the said treaty of April 19th, 1858, shall be in full force and effect, the same as though this agreement had not been made, and the said Yankton Indians shall continue to receive their annuities under the said treaty of April 19th, 1858.

ARTICLE XIX.

Copy of ratified agreement.

When this agreement shall have been ratified by Congress, an official copy of the act of ratification shall be engrossed, in copying ink, on paper of the size this agreement is written upon, and sent to the Yankton Indian agent to be copied by letter press in the "Agreement Book" of the Yankton Indians.

ARTICLE XX.

Signing agreement.

For the purpose of this agreement, all young men of the Yankton tribe of Sioux Indians, eighteen years of age or older, shall be considered adults, and this agreement, when signed by a majority of the male adult members of the said tribe, shall be binding upon the Yankton tribe of Sioux Indians. It shall not, however, be binding upon the United States until ratified by the Congress of the United States, but shall as soon as so ratified become fully operative from its date. A refusal by Congress to ratify this agreement shall release the said Yankton Indians under it.

In witness whereof, the said J. C. Adams, John J. Cole, and J. W. French, on the part of the United States, and the chiefs, headmen, and other adult male Indians, on the part of the said Yankton tribe of Sioux or Dakota—spelled also Dacotah—Indians, have hereunto set their hands and affixed their seals.

Done at the Yankton Indian agency, Greenwood, South Dakota, this thirty-first day of December, eighteen hundred and ninety-two (Dec. 31st, 1892).

JAMES C. ADAMS, [SEAL.]

JOHN J. COLE. [SEAL.]

The foregoing articles of agreement having been read in open council, and fully explained to us, we, the undersigned, chiefs, headmen, and other adult male members of the Yankton tribe of Sioux Indians, do hereby consent and agree to all the stipulations therein contained.

Witness our hands and seals of date as above.

Wicahaokdeun (William T. Selwyn), seal; and others:

Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That said agreement be, and the same hereby is, accepted, ratified, and confirmed.

That for the purpose of carrying the provisions of this Act into effect there is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, the sum of six hundred thousand dollars, or so much thereof as may be necessary, of which amount the sum of five hundred thousand dollars shall be placed to the credit of said tribe in the Treasury of the United States, and shall bear interest at the rate of five per centum per annum from the first day of January, eighteen hundred and ninety-three, said interest to be paid and distributed to said tribe as provided in articles five and six of said agreement. Of the amount herein appropriated one hundred thousand dollars shall be immediately available to be paid to said tribe, as provided in section one of article three of said agreement. There is also hereby appropriated the further sum of ten thousand dollars, or so much thereof as may be necessary, which sum shall be immediately available, to be paid to the adult male members of said tribe, as provided in article seven of said agreement. There is also hereby appropriated the further sum of eleven thousand four hundred and seventy-five dollars, which sum shall be immediately available, to be paid as provided in article fifteen of said agreement: *Provided*, That none of the money to be paid to said Indians under the terms of said agreement, nor any of the interest thereon, shall be subject to the payment of any claims, judgments, or demands against said Indians for damages or depredations claimed to have been committed prior to the signing of said agreement.

That the lands by said agreement ceded, to the United States shall, upon proclamation by the President, be opened to settlement, and shall be subject to disposal only under the homestead and town-site laws of the United States, excepting the sixteenth and thirty-sixth sections in each Congressional township, which shall be reserved for common-school purposes and be subject to the laws of the State of South Dakota: *Provided*, That each settler on said lands shall, in addition to the fees provided by law, pay to the United States for the lands so taken by him the sum of three dollars and seventy-five cents per acre, of which sum he shall pay fifty cents at the time of making his original entry and the balance before making final proof and receiving a certificate of final entry; but the rights of honorably discharged Union soldiers and sailors, as defined and described in sections twenty-three hundred and four and twenty-three hundred and five of the Revised Statutes of the United States, shall not be abridged except as to the sum to be paid as aforesaid.

That the Secretary of the Interior, upon proper plats and description being furnished, is hereby authorized to issue patents to Charles Picotte and Felix Brunot, and W. T. Selwyn, United States interpreters, for not to exceed one acre of land each, so as to embrace their houses near the agency buildings upon said reservation, but not to embrace any buildings owned by the Government, upon the payment by each of said persons of the sum of three dollars and seventy-five cents.

Agreement confirmed.

Amount placed to credit of Indians.

Interest.

Immediately available.

Presents to adults.

Payments to scouts.

Provisos. Prior depredations.

Lands opened to homestead and town-site settlement.

Proviso. Additional payment by settlers.

Soldiers and sailors. R.S., secs. 2304, 2305, p. 422.

Patents to interpreters.

Sale, etc., of intoxicants prohibited.

Punishment.

That every person who shall sell or give away any intoxicating liquors or other intoxicants upon any of the lands by said agreement ceded, or upon any of the lands included in the Yankton Sioux Indian Reservation as created by the treaty of April nineteenth, eighteen hundred and fifty-eight, shall be punishable by imprisonment for not more than two years and by a fine of not more than three hundred dollars.

[28 Stat., p. 320.] AGREEMENT WITH THE YAKIMA NATION OF INDIANS IN WASHINGTON.

Agreement with Yakimas in Washington ratified.

SEC. 13. That the following agreement entered into by John Lane, special United States Indian agent, and Lewis T. Erwin, United States Indian agent, Yakima, duly appointed by the Secretary of the Interior in that behalf, of the one part, and the head chief, chiefs, headmen, and principal men of the several tribes and bands composing the Yakima Nation of Indians, in the State of Washington, of the other part, bearing date the eighth day of January, eighteen hundred and ninety-four, and now on file in the office of the Commissioner of Indian Affairs, is hereby accepted, ratified, and confirmed.

Commissioners.

Whereas John Lane, special U. S. Indian agent, and Lewis T. Erwin, U. S. Indian agent for the Yakima Indian Agency, duly appointed commissioners on the part of the United States, did, on the eighth day of January, 1894, conclude an agreement with the following tribes and bands of Indians, viz.: Yakimas, Palouses, Pishonuses, Wenatshapams, Klickitas, Klingnits, Kou was say us, Li ay was, Shinpahs, Wish hams, Shy iks, Oche chotes, Kah milt pahs, and Se ap cats, all constituting what is known as the Yakima Nation of Indians, by their chiefs, headmen, and principal men, embracing a majority of all male adult Indians belonging to the Yakima Nation of Indians aforesaid, which said agreement is as follows: Whereas a certain right of fishery was duly provided for in article ten of the treaty concluded with these Indians by the United States in the year 1855 and ratified by Congress on March 8, 1859, which said article reads as follows, to wit:

Vol. 12, p. 954.

"ARTICLE 10. And provided, That there is also reserved and set apart from the lands ceded by this treaty, for the use and benefit of the aforesaid Confederated Tribes and Bands, a tract of land not exceeding in quantity one township of six miles square, situated at the forks of the Pishonuse or Wenatshapam River, and known as the "Wenatshapam Fishery," which said reservation shall be surveyed and marked out whenever the President may direct, and be subject to the same provisions and restrictions as other Indian reservations;" and

Whereas a certain tract of land was duly surveyed and set apart, in the year 1893, by the United States in fulfillment of the agreement, on the part of the United States, to be performed as set forth in said article 10 of said treaty of 1855, as aforesaid, which said tract of land is known as the Wenatshapam Fishery, and is described as follows, to wit:

"And provided, That there is also reserved and set apart, from the lands ceded by this treaty, for the use and benefit of the aforesaid Confederated Tribes and Bands, a tract of land not exceeding in quantity one township of six miles square, situated at the forks of the Pishonuse or Wenatshapam River, and known as the "Wenatshapam Fishery," which said reservation shall be surveyed and marked out whenever the President may direct, and be subject to the same provisions and restrictions as other Indian Reservations;" and

Whereas the said Indians have found the said right of fishery and the said fishery above described of little use or benefit to them, and are willing to dispose of the same to the United States, therefore, in order to carry out such purpose, it is hereby agreed as follows:

ARTICLE I.

Wenatshapam fishery right ceded.

The said Indians hereby cede and relinquish to the United States all their right, title, interest, claim, and demand of whatsoever name or nature of in, and to all their right of fishery, as set forth in article 10 of said treaty aforesaid, and also all their right, title, interest, claim, or demand of, in, and to said land above described, or any corrected description thereof and known as the Wenatshapam fishery.

ARTICLE II.

Consideration.

In consideration of the foregoing cession and relinquishment the United States hereby agrees to pay or expend through their Indian

Agent, Yakima Agency, twenty thousand dollars, which said sum is to be deposited in a United States depository for their use and benefit as soon as approved by Congress, and subject to their order, the Indians reserving the right to dispose of said money as they may decide in general council to be held by them and for that purpose. After the ratification of this agreement by Congress and the further consideration that the Indians known as the Wenatshapam Indians, residing on the Wenatchee River, State of Washington, shall have land allotted to them in severalty in the vicinity of where they now reside, or elsewhere, as they may select, in accordance with article 4 of the general allotment law. Other lands to resident Indians.

ARTICLE III.

This agreement shall not be binding upon either party until ratified by Congress. Ratification.

Dated and signed at Fort Simcoe, Yakima Agency, Washington, January 8, 1894.

JOHN LANE, [SEAL.]
Special U. S. Indian Agent,
LEWIS T. ERWIN, [SEAL.]
U. S. Indian Agent. Yakima Commissioners.

The foregoing article of agreement having been fully explained to us in open council we, the undersigned, chiefs, headmen, and principal men of the several tribes and bands composing the Yakima Nation of Indians in the State of Washington, do hereby consent and agree to all the stipulations therein contained.

Witness our hands and seals at Yakima Agency, Washington, this eighth day of January, eighteen hundred and ninety-four. Signed.

Joe Stwire, his x mark, seal; and others:

Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the said agreement be, and the same hereby is accepted, ratified, and confirmed. Agreement confirmed.

For the purpose of carrying this agreement and ratification into effect, there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of twenty thousand dollars, to be paid to the Indian agent of the Yakima Indian Agency, to be expended by him as provided in the second article of said agreement, in such manner and in such sums as may be decided upon by the general council of the Yakima Nation of Indians, convened and held for that purpose. And the land so ceded and relinquished is hereby restored to the public domain, subject to the land laws of the United States: *Provided*, That the Indians, known as the Wenatshapam Indians, residing on the Wenatchee River, State of Washington, shall be allowed the privilege of taking allotments of land in severalty under the fourth section of the general allotment Act of eighteen hundred and eighty-seven, and amended Act of eighteen hundred and ninety-one, as contemplated by the second article of said agreement: *And provided further*, That it shall be the duty of the Indian agent of the Yakima Indian Agency to see that the Wenatshapam and other Indians living on the Wenatchee River, State of Washington, shall receive and have paid to them their full and pro rata share of said moneys. Amount for Indians.

Lands restored to public domain.

Payment.

AGREEMENT WITH THE CŒUR D'ALENE INDIANS IN IDAHO.

SEC. 14. The following agreement entered into by John Lane, United States special Indian agent, on the part of the United States, duly appointed by the Secretary of the Interior, in that behalf, of the one part, and the Cœur d'Alene Indians, residing on the Cœur d'Alene Indian Reservation, in the State of Idaho, of the other part, bearing date the seventh day of February, eighteen hundred and ninety-four, and which reads as follows, is hereby accepted, ratified, and confirmed: [28 Stat., p. 322.]
Agreement with the Cœur d'Alenes in Idaho, ratified.

ARTICLE I.

This agreement made on the 7th day of February, 1894, by John Lane, U. S. special Indian agent, on the part of the United States, and Northern boundary of reservation changed.

Vol. 27, p. 616.

the Cœur d'Alene Indians, residing on the Cœur d'Alene Reservation, in the State of Idaho, by their chiefs, headmen, and principal men, embracing a majority of all the male adult Indians occupying said reservation, pursuant to an item in the act of Congress, making appropriations for current and contingent expenses, and fulfilling treaty stipulations with Indian tribes for the fiscal year ending June 30, 1894, as follows:

"The Secretary of the Interior is hereby directed to negotiate with the Cœur d'Alene Indians for a change of the northern line of their reservation so as to exclude therefrom a strip of land on which the town of Harrison and numerous settlers are located.

"That the foregoing provision shall take effect and be in force, after it shall have been submitted to and agreed to by the Indians of said tribe, and approved by the Secretary of the Interior."

Lands ceded.

Witnesseth, that the said Indians, for the consideration hereinafter named, do hereby cede, grant, and relinquish to the United States all right, title, and claim which they now have or ever had of, in, and to all the land embraced within the following-described tract, now a part of their reservation, to wit:

Beginning at a point on the north line of the reservation, on the east bank of the mouth of the Cœur d'Alene River, and running due south one mile, thence due east parallel with the north boundary line to the east boundary line, thence north on the east boundary line to the northeast corner of the reservation, thence west on the north boundary line to the point of beginning.

ARTICLE II.

Compensation.

And it is further agreed, in consideration of the above, that the United States will pay to the said Cœur d'Alene tribe of Indians the sum of fifteen thousand (\$15,000) dollars, the same to be paid to the said Indians upon the completion of all the provisions of this agreement.

ARTICLE III.

Distribution.

It is further agreed that the payment of the money aforesaid shall be made to the said tribe of Indians pro rata, or share and share alike, for each and every member of the said tribe as recognized by said tribe now living on said reservation.

ARTICLE IV.

New boundary.

The new boundary lines of the reservation, established by this agreement, or such portions thereof as are not defined by natural objects, shall be surveyed and marked in a plain and substantial manner. The cost of such surveys are to be paid by the United States.

ARTICLE V.

Ratification.

This agreement shall not be binding upon either party until ratified by Congress.

Dated and signed at De Smet Mission, Idaho, this 7th day of February, 1894.

JOHN LANE,
U. S. Special Indian Agent.

Witness: GEO. F. STEELE.

The foregoing articles of agreement, having been fully explained to us in open council, we, the undersigned, chiefs, headmen, and principal men of the Cœur d'Alene tribe of Indians residing on the Cœur d'Alene Reservation, State of Idaho, do hereby consent and agree to all the stipulations therein contained.

Signed.

Witness our hands and seals at De Smet Mission, State of Idaho, this 7th day of February, 1894.

Andrew Sultice, his X mark, seal; and others.

Amount for
Indians, prorata.

For the purpose of carrying out the terms of said agreement the sum of fifteen thousand dollars is hereby appropriated, to be paid out of any money in the Treasury not otherwise appropriated, the same to be made immediately available and to be paid the Indians of the Cœur d'Alene Reservation by the Secretary of the Interior, pro rata, or share and share alike, in accordance with the terms of said agreement.

That for the purpose of segregating the ceded land from the diminished Cœur d'Alene Indian Reservation, so much of the boundary line described in article one of the agreement that is not defined by a natural boundary shall be properly surveyed and permanently marked in a plain and substantial manner by prominent and durable monuments. Survey for new boundary.

That to provide for disposal of the lands acquired by the foregoing agreement the Secretary of the Interior shall cause the same to be properly surveyed, subdivided, and platted in accordance with existing law; and the Secretary of the Interior shall direct one of the inspectors of the Department of the Interior to appraise the value of the town site of Harrison and state the price per acre of each and every legal subdivision of the ceded tract. Disposal of lands.

In case the total appraised value of all the lands exceeds or falls short of fifteen thousand dollars and the cost of appraising the lands, the appraisement of the town site and the subdivisions shall be scaled in proportion to the appraised values to such price as will bring the total to the sum to be paid the Indians and the cost of the appraisement; and at the rates thus determined, in addition to the usual fees and charges, the lands will be disposed of under the homestead and town-site laws, preference being given to those persons who were actual bona fide settlers at the date of the agreement, February seventh, eighteen hundred and ninety-four: *Provided*, That in no case shall the price per acre fall below the minimum prescribed by law. Appraisement.

Proviso.
Minimum price.

AGREEMENT WITH THE ALSEA AND OTHER INDIANS ON SILETZ RESERVATION IN OREGON. [28 Stats., p. 323.]

SEC. 15. Whereas Reuben P. Boise, William H. Odell, and H. H. Harding, duly appointed commissioners on the part of the United States, did, on the thirty-first day of October, eighteen hundred and ninety-two, conclude an agreement with the chiefs, headmen, and other male adults of the Alsea and other bands of Indians residing upon the Siletz Reservation in the State of Oregon, which said agreement is as follows: Agreement with Alseas, etc., for sale of lands, Siletz Reservation, Oreg., ratified.

This agreement made and entered into in pursuance of the provisions of the Act of Congress approved July thirteen, eighteen hundred and ninety-two, at the Siletz Agency, Oregon, by Reuben Boise, William H. Odell, and H. H. Harding, on the part of the United States, and the chiefs, headmen, and male adults of the Alsea and other bands of Indians located on said Siletz Reservation, witnesseth:

ARTICLE I.

The Indians located on said Siletz Reservation hereby cede, sell, relinquish, and convey to the United States all their claim, right, title, and interest in and to all the unallotted lands within the limits of said reservation, except the five sections described in Article IV of this agreement. Unallotted lands ceded.

ARTICLE II.

In consideration of the lands sold, ceded, relinquished, and conveyed as aforesaid, the United States stipulates and agrees to pay to the Indians located on said Siletz Reservation the sum of one hundred and forty-two thousand and six hundred dollars (\$142,600), in payments as follows, to wit: Consideration.

One hundred thousand dollars (\$100,000) shall be deposited in the Treasury of the United States to the credit of the Indians of the Siletz Reservation, in the State of Oregon, which shall bear interest at the rate of five (5) per cent per annum, to be paid annually at the agency on said reservation on the first day of March of each and every year. The balance of said principal sum shall be paid as follows, to wit: Fund.

Within three months after the approval of this agreement by Congress there shall be paid to each Indian on said reservation, who shall be of age, to wit: Males of twenty-one years, and females of eighteen years or more, and all married persons, whether they shall be of age or not, the sum of seventy-five dollars (\$75) each, and annually thereafter on each interest-paying day, there shall be paid a like sum of seventy-five dollars (\$75) to each one who shall have become of age as aforesaid, or who shall have married, whether of age or not (who shall Payments to adults.

- not have been paid seventy-five dollars) during the preceding year, the said sum of seventy-five dollars; and all of the money so held back by the United States to pay said delayed payments shall also draw interest at the rate of five per cent per annum; and the parents of all infants who are supporting the same shall receive annually all the interest money according to the share pro rata of each infant: *Provided, however,* That in case of all aged or infirm persons, who are incapable of taking care of themselves, the same due and payable to such may be used for the support and care of such persons, in such manner as the Secretary of the Interior may from time to time direct:
- Aged persons. *And provided further,* That this agreement shall apply only to persons who shall be living and belonging on said reservation at the time of the ratification of the same by Congress.
- Limitation.

ARTICLE III.

- Payment of taxes, etc. It is hereby further stipulated and agreed that as soon as the lands which have been allotted to the Indians on said Siletz Indian Reservation shall become subject and liable to taxation by the State of Oregon, then the Secretary of the Interior may reserve a part of said interest money, so coming to said Indians, not exceeding one-third thereof for each year, and pay the same to the State and local authorities of the State of Oregon, in lieu of taxation upon the lands allotted to said Indians, under such rules and regulations as he may prescribe or as may be prescribed by law, to secure to the Indians the full enjoyment of the protection of the laws of said State, and a just share of all benefits derived from said payment in lieu of taxes: *Provided,*
- Road taxes. That all road taxes, which by the laws of the State may be discharged by work, may be so discharged by the Indian owners of said allotted lands on the roads in their respective vicinities: *And provided further,* That Congress may from time to time appropriate and provide to pay any part of said principal sum, so as aforesaid held in trust, as the condition and interests of said Indians may seem to require or justify:
- Payment of und. *And provided further,* In case said Indians or any portion thereof may desire to be furnished with supplies instead of cash payments of interest or principal, then the Secretary of the Interior may issue such supplies at cost price in such reservation, at the agency therein, in lieu of cash payments of interest, or any part of the principal sum, which may be from time to time appropriated by Congress: *And provided further,* That in case the Secretary of the Interior may at any time be satisfied that any of said Indians are fully competent and capable of managing and taking care of their full pro rata of said purchase money, and that it will be to their interests to receive the same, and that other portions of said Indians are not so capable and competent, then he shall recommend to Congress that sufficient amount of such principal sum so held in trust as provided in section 2 of this agreement shall be appropriated to pay the full pro rata of such competent and capable Indians of such principal fund, and when the same shall have been paid and receipted for personally by each Indian so paid, then such Indians shall have no further interest in said trust fund.
- Supplies, etc.
- Distribution to civilized Indians.

ARTICLE IV.

- Sections reserved. It is further stipulated and agreed that section nine (9) in township nine (9) south, range 11 west of the Willamette meridian, and the west half of the west half of section five (5), and the east half ($\frac{1}{2}$) of section six (6) and the east half of the west half of section 6, township 10 south, range 10 west, W. M., and the south half of section 8 and the north half of section 17, and section sixteen (16) in township 9 south, range 9, west of the Willamette meridian, and the east half of the northeast $\frac{1}{4}$, and lot 3, sec. 20, and S. $\frac{1}{2}$ and S. $\frac{1}{2}$ of north half of sec. 21, town 8, range 10 west, W. M., are hereby reserved from sale, and that the timber on said five sections of land may be cut and manufactured by the Indians of said Siletz Reservation for their own use and for sale, under such rules as the Secretary of the Interior shall from time to time prescribe, regulating the cutting of timber, so as to secure an equality of benefits to the Indians, employment for them, and judicious aid to them in becoming self-supporting.

ARTICLE V.

It is further agreed that no part of said sum of money so agreed as aforesaid shall ever be applied to the payment of any claim against any of the Indians alleged to have occurred prior to the ratification of this agreement by Congress.

Prior claims.

ARTICLE VI.

It is further stipulated and agreed that any religious society or other organization not occupying under proper authority, for religious or educational work among the Indians, any of the lands in this agreement ceded, shall have the right for two years from the date of the ratification of this agreement within which to purchase the land so occupied at the rate of \$2.50 per acre, the same to be conveyed to such society or organization by patent.

Lands for religious, etc., uses.

ARTICLE VII.

This agreement shall not take effect and be in force until ratified by the Congress of the United States.

Ratification.

In witness whereof the said Reuben P. Boise, William H. Odell, and H. H. Harding, on the part of the United States, and the chiefs, head men, and other male adults of the Indians residing on said Siletz Reservation, have hereunto set their hands and affixed their seals.

Done at the Siletz Agency, Oregon, this the 31st day of October, A. D. 1892.

REUBEN P. BOISE, [L. S.]

WILLIAM ODELL, [L. S.]

H. H. HARDING, [L. S.]

United States Commissioners.

Committee appointed at general council of Indians, October 29, 1892:

SCOTT LANE. [L. S.]; and others:

Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That said agreement be, and the same hereby is, accepted, ratified, and confirmed.

Agreement accepted, etc.

That for the purpose of carrying the provisions of this Act into effect there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of one hundred and forty-two thousand six hundred dollars, which sum of money shall be paid to the Indians in the manner and form prescribed by articles two and three of the agreement: *Provided*, That none of the money or interest thereon which is by the terms of said agreement to be paid to said Indians shall be applied to the payment of any judgment that has been or may hereafter be rendered under the provisions of the Act of Congress approved March third, eighteen hundred and ninety-one, entitled "An Act to provide for the adjudication and payment of claims arising from Indian depredations." The mineral lands shall be disposed of under the laws applicable thereto, and the balance of the land so ceded shall be disposed of until further provided by law under the town-site law and under the provisions of the homestead law: *Provided, however*, That each settler, under and in accordance with the provisions of said homestead laws, shall, at the time of making his original entry, pay the sum of fifty cents per acre in addition to the fees now required by law, and at the time of making final proof shall pay the further sum of one dollar per acre, final proof to be made within five years from the date of entry, and three years' actual residence on the land shall be established by such evidence as is now required in homestead proofs as a prerequisite to title or patent.

Amount appropriated.

Provisos.
Prior depredations claims.

Entries.

Additional price for lands.

That all of the money so held by the United States to pay the delayed payments shall draw interest at the rate of five per centum per annum after the passage of this Act.

Interest on delayed payments.

That immediately after the passage of this Act the Secretary of the Interior shall under such regulations as he may prescribe, open said lands to settlement after proclamation by the President and sixty days' notice.

Opening lands to settlement.

[28 Stat., p. 326.]

AGREEMENT WITH THE NEZ PERCE INDIANS IN IDAHO.

Agreement
with Nez Perce
Indians, Idaho,
for cession of
lands.

Vol. 24, p. 388.

SEC. 16. Whereas Robert Schleicher, James F. Allen, and Cyrus Beede, duly appointed commissioners on the part of the United States, did on the first day of May, eighteen hundred and ninety-three, conclude an agreement with the principal men and other male adults of the Nez Perce tribe of Indians upon the Lapwai Reservation, in the State of Idaho, which said agreement is as follows:

Whereas the President, under date of October thirty-first, eighteen hundred and ninety-two, and under the provisions of the Act of Congress entitled "An Act to provide for the allotment of lands in severalty to Indians on the various reservations, and to extend the protection of the laws of the United States and the Territories over the Indians, and for other purposes," approved February eighth, eighteen hundred and eighty-seven, authorized negotiations with the Nez Perce Indians in Idaho for the cession of their surplus lands; and

Whereas the said Nez Perce Indians are willing to dispose of a portion of the tract of land in the State of Idaho reserved as a home for their use and occupation by the second article of the treaty between said Indians and the United States, concluded June ninth, eighteen hundred and sixty-three:

Now, therefore, this agreement made and entered into in pursuance of the provisions of said Act of Congress approved February eighth, eighteen hundred and eighty-seven, at the Nez Perce Agency, by Robert Schleicher, James F. Allen, and Cyrus Beede, on the part of the United States, and the principal men and male adults of the Nez Perce tribe of Indians located on said Nez Perce Reservation, witnesseth:

ARTICLE I.

Lands ceded.

The said Nez Perce Indians hereby cede, sell, relinquish, and convey to the United States all their claim, right, title, and interest in and to all the unallotted lands within the limits of said reservation, saving and excepting the following described tracts of lands, which are hereby retained by the said Indians, viz:

In township thirty-four, range four west: Northeast quarter, north half and southeast of northwest quarter, northeast quarter of southwest quarter, north half and east half of southwest quarter, and the southeast quarter of southeast quarter, section thirteen, four hundred and forty acres.

In township thirty-four, range three west: Sections ten, fifteen, thirty-six, one thousand nine hundred and twenty acres.

In township thirty-three, range three west: Section one; northwest quarter of northeast quarter, north half of northwest quarter section twelve, seven hundred and sixty acres.

In township thirty-five, range two west: South half of northeast quarter, northwest quarter, north half and southeast quarter of southwest quarter, southeast quarter section three; east half, east half of northwest quarter, southwest quarter section ten, section eleven; north half, north half of south half, section twenty-one; east half of northeast quarter, section twenty; sections twenty-two, twenty-seven, thirty-five, four thousand two hundred acres.

In township thirty-four, range two west: North half, southwest quarter, north half and southwest quarter and west half of southeast quarter of southeast quarter, section thirteen; section fourteen; north half section twenty-three, west half of east half and west half of northeast quarter, northwest quarter, north half of southwest quarter, west half of east half and northwest quarter and east half of southwest quarter of southeast quarter, section twenty-four; section twenty-nine, two thousand seven hundred acres.

In township thirty-three, range two west: West half and southeast quarter section six; sections sixteen, twenty-two, twenty-seven; north half and north half of south half section thirty-four, two thousand eight hundred and eighty acres.

In township thirty-four, range one west: West half section two; sections three, four; north half and southwest quarter section eight; north half section nine; north half and north half of southwest quarter section eighteen; northwest quarter section seventeen, two thousand nine hundred and sixty acres.

In township thirty-seven, range one east: Section twenty; section twenty-one, less south half of south half of southwest quarter of southeast quarter (ten acres), one thousand two hundred and seventy acres.

In township thirty-six, range one east: South half of sections three, four; sections eleven, twelve, one thousand nine hundred and twenty acres.

In township thirty-six, range two east: Sections sixteen, seventeen, eighteen, twenty; all of section twenty-five west of boundary line of reservation; sections twenty-six, twenty-seven, four thousand two hundred and forty acres. Lands ceded—
Continued.

In township thirty-five, range two east: North half of sections sixteen, seventeen, section twenty-seven; north half of section thirty-four, one thousand six hundred acres.

In township thirty-four, range two east: East half and east half of west half of southeast quarter section twenty-four, one hundred acres.

In township thirty-four, range three east: South half of sections nineteen, twenty; north half; north half of south half; southwest quarter and north half of southeast quarter of southwest quarter; north half of south half of southeast quarter section twenty-three; north half; north half and north half of southwest quarter and southeast quarter of southwest quarter; southeast quarter section twenty-four; north half and southeast quarter of northeast quarter; north half of northwest quarter section twenty-five; south half of northeast quarter of northeast quarter section twenty-six; section twenty-nine; northeast quarter of northeast quarter and south half section thirty; northwest quarter and north half of southwest quarter section thirty-one; northeast quarter; north half and southeast quarter of northwest quarter section thirty-two; northwest quarter; north half of southwest quarter, section thirty-three, three thousand seven hundred acres.

In township thirty-three, range four east: South half of southeast quarter section eighteen; northeast quarter and fraction northeast of river in east half of northwest quarter section nineteen; fraction west of boundary line of reservation, in section twenty-two; west half and southeast quarter of section thirty-five, one thousand four hundred and forty acres.

In township thirty-two, range four west: Fraction in west half of northeast quarter of southwest quarter; fraction in northwest quarter of southeast quarter section one; section two; south half of section six; west half and southeast quarter of northeast quarter of section nine, one thousand four hundred and ten acres.

In township thirty-one, range four west: South half of northeast quarter; southeast quarter of northwest quarter; northeast quarter of southwest quarter; southeast quarter section seventeen; northwest quarter section twenty-one, four hundred and eighty acres. Total, thirty-two thousand and twenty acres.

ARTICLE II.

It is also stipulated and agreed that the place known as "the boom" on the Clearwater River, near the mouth of Lapwai Creek, shall be excepted from this cession and reserved for the common use of the tribe, with full right of access thereto, and that the tract of land adjoining said boom, now occupied by James Moses, shall be allotted to him in such manner as not to interfere with such right. Also that there shall be reserved from said cession the land described as follows: "Commencing at a point at the margin of Clearwater River, on the south side thereof, which is three hundred yards below where the middle thread of Lapwai Creek empties into said river; run thence up the margin of said Clearwater River at low-water mark, nine hundred yards to a point; run thence south two hundred and fifty yards to a point; thence southwesterly, in a line to the southeast corner of a stone building, partly finished as a church; thence west three hundred yards to a point; thence from said point northerly in a straight line to the point of beginning; and also the adjoining tract of land lying southerly of said tract, on the south end thereof; commencing at the said corner of said church, and at the point three hundred yards west thereof, and run a line from each of said points. One of said lines running on the east side and the other on the west of said Lapwai Creek; along the foothills of each side of said creek: Lands reserved.

James Moses.
Allotment.

up the same sufficiently far so that a line being drawn east and west to intersect the aforesaid lines shall embrace within its boundaries, together with the first above-described tract of land, a sufficient quantity of land as to include and comprise six hundred and forty acres;" for which described tracts of land the United States stipulates and agrees to pay to William G. Langford, his heirs or assigns, the sum of twenty thousand dollars, upon the execution by said Langford, his heirs or assigns, of a release and relinquishment to the United States of all right, title, interest, or claim, either legal or equitable, in and to said tracts of land, derived by virtue of a quit-claim deed of February fourteenth, eighteen hundred and sixty-eight, to the said William G. Langford, from Langdon S. Ward, treasurer of the American Board of Commissioners for Foreign Missions, which release and relinquishment shall be satisfactory to the Secretary of the Interior, and it is stipulated and agreed by said Nez Perce Indians that upon the execution and approval of such release and relinquishment the right of occupancy of said Indians in said described tracts shall terminate and cease and the complete title thereto immediately vest in the United States: *Provided*, That any member of the said Nez Perce tribe of Indians entitled to an allotment now occupying and having valuable improvements upon any of said lands not already occupied or improved by the United States may have the same allotted to him in such subdivisions as shall be prescribed and approved by the Secretary of the Interior, in lieu of an equal quantity of agricultural land allotted to him elsewhere; and for this purpose shall relinquish any patent that may have been issued to him before the title to said "Langford" tracts of land shall vest in the United States, and shall have a new patent issued to him of the form and legal effect prescribed by the fifth section of the act of February eighth, eighteen hundred and eighty-seven (twenty-fourth Statutes, three hundred and eighty-eight), covering the new allotment and that portion of the former allotment not surrendered. It is further agreed that five acres of said tract, upon which the Indian Presbyterian Church is located, as long as same shall remain a church, shall be patented to the trustees of said church; that the said five acres shall not include improvements made by the United States; the said five acres to be selected under the direction of the Commissioner of Indian Affairs.

ARTICLE III.

Consideration. In consideration for the lands ceded, sold, relinquished, and conveyed as aforesaid the United States stipulates and agrees to pay to the said Nez Perce Indians the sum of one million six hundred and twenty-six thousand two hundred and twenty-two dollars, of which amount the sum of six hundred and twenty-six thousand two hundred and twenty-two dollars shall be paid to said Indians per capita as soon as practicable after the ratification of this agreement. The remainder of said sum of one million six hundred and twenty-six thousand two hundred and twenty-two dollars shall be deposited in the Treasury of the United States to the credit of the "Nes Perces Indians, of Idaho," and shall bear interest at the rate of five per centum per annum, which principal and interest shall be paid to said Indians per capita as follows, to wit: At the expiration of one year from the date of the ratification of this agreement the sum of fifty thousand dollars, and semiannually thereafter the sum of one hundred and fifty thousand dollars with the interest on the unexpended portion of the fund of one million dollars until the entire amount shall have been paid, and no part of the funds to be derived from the cession of lands by this agreement made shall be diverted or withheld from the disposition made by this article on account of any depredation or other act committed by any Nez Perce Indian, prior to the execution of this agreement, but the same shall be actually paid to the Indians in cash, in the manner and at the times as herein stipulated.

ARTICLE IV.

Saw mills, etc. It is further stipulated and agreed that the United States will purchase for the use of said Nez Perce Indians two portable steam saw mills, at a cost not exceeding ten thousand dollars, and will provide for said Indians, for a period not exceeding two years, and at a cost not exceeding twenty-four hundred dollars, a competent surveyor, for the purpose of fully informing said Indians as to the correct locations of their allotments and the corners and lines thereof.

ARTICLE V.

It is further stipulated and agreed that the lands by this agreement ceded, shall not be opened for public settlement until trust patents for the allotted lands shall have been duly issued and recorded, and the first payment shall have been made to said Indians. Opening to settlement.

ARTICLE VI.

It is further stipulated and agreed that any religious society or other organization now occupying under proper authority, for religious or educational work among the Indians, any of the lands ceded, shall have the right for two years from the date of the ratification of this agreement, within which to purchase the land so occupied, at the rate of three dollars per acre, the same to be conveyed to such society or organization by patent, in the usual form. Lands for religious, etc., uses.

ARTICLE VII.

It is further stipulated and agreed that all allotments made to members of the tribe who have died since the same were made, or may die before the ratification of this agreement, shall be confirmed, and trust patents issued in the names of such allottees, respectively. Allotments to deceased Indians to be confirmed.

ARTICLE VIII.

It is further stipulated and agreed that the first per capita payment, provided for in Article VIII of this agreement, shall be made to those members of the Nez Perce tribe whose names appear on the schedule of allotments made by Special Agent Fletcher, and to such as may be born to them before the ratification of this agreement: *Provided*, That should it be found that any member of the tribe has been omitted from said schedule, such member shall share in the said payment, and shall be given an allotment, and each subsequent payment shall be made to those who receive the preceding payment and those born thereafter: *Provided*, That not more than one payment shall be made on account of a deceased member. Payment of first per capita.

ARTICLE IX.

It is further agreed that the lands by this agreement ceded, those retained, and those allotted to the said Nez Perce Indians shall be subject, for a period of twenty-five years, to all the laws of the United States prohibiting the introduction of intoxicants into the Indian country, and that the Nez Perce Indian allottees, whether under the care of an Indian agent or not, shall, for a like period, be subject to all the laws of the United States prohibiting the sale or other disposition of intoxicants to Indians. Intoxicating liquors.

ARTICLE X.

Representation having been made by the Indians in council that several members of the Nez Perce tribe, to the number of about fifty, as per list hereto attached, served the United States under General O. O. Howard, in the late war with Joseph's Band of said tribe, as scouts, couriers, and messengers, and that they have received no pay therefor; it is agreed that the United States, through its properly constituted authority, will carefully examine each of the cases herewith presented, and make such remuneration to each of said claimants as shall, upon such examination, be found to be due; not exceeding the sum of two dollars and fifty cents per day each, for the time actually engaged in such service; it being understood and agreed that the time of service of said claimants in no case exceeded sixty days. And it also having been made to appear that Abraham Brooks, a member of the Nez Perce tribe of Indians, was engaged in the service of the United States in the late war with Joseph's Band of Nez Percés, and it also appearing that the said Abraham Brooks was wounded in said service, and that by reason thereof, he is now in failing health, and has been for several years; that he is now nearly blind in consequence thereof; it is agreed that an investigation of all the facts in the case shall be made by the proper authorities of the United States, as Claims of certain scouts to be examined.

early as practicable, and that if found substantially as herein represented, or if found worthy under the law in such cases provided, he shall be allowed and paid by the United States a pension adequate to the service and disability.

ARTICLE XI.

Treaties continued. The existing provisions of all former treaties with said Nez Perce Indians not inconsistent with the provisions of this agreement are hereby continued in full force and effect.

ARTICLE XII.

Ratification. This agreement shall not take effect and be in force until ratified by the Congress of the United States.

In witness whereof the said Robert Schleicher, James F. Allen, and Cyrus Beede, on the part of the United States, and the principal men and other male adults of the Nez Perce tribe of Indians, have hereunto set their hands.

Concluded at the Nez Perce Agency, this first day of May, anno domini eighteen hundred and ninety-three.

ROBERT SCHLEICHER,
JAMES F. ALLEN,
CYRUS BEEDE,
A. B. LAWYER; and others.

Therefore,
Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the said agreement be, and the same hereby is, accepted, ratified, and confirmed
That for the purpose of carrying the provisions of this Act into effect there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of one million six hundred and sixty-eight thousand six hundred and twenty-two dollars, of which amount the sum of one million dollars shall be placed to the credit of "the Nez Perce Indians of Idaho" in the Treasury of the United States, and shall bear interest at the rate of five per centum per annum. Said sum of one million six hundred and sixty-eight thousand six hundred and twenty-two dollars, together with the interest on said sum of one million dollars, shall be paid to said Indians, or expended for their benefit, as provided in articles two, three, four, and eight of said agreement; "out of which sum the Secretary of the Interior shall pay to the heirs, administrator, or legal representatives of William G. Langford, deceased, the sum of twenty thousand dollars, upon a release and relinquishment to the United States by said heirs, administrator, or legal representatives of all right, title, interest, or claim, either legal or equitable, in and to the tract of land described in article two of said agreement as therein provided: *Provided*, That none of the money agreed to be paid said Indians, nor any of the interest thereon, shall be, or become, liable to the payment of any judgment or claim for depredations committed by said tribe or any member thereof before the date of said agreement.

That immediately after the issuance and receipt by the Indians of trust patents for the allotted lands, as provided for in said agreement, the lands so ceded, sold, relinquished, and conveyed to the United States shall be opened to settlement by proclamation of the President, and shall be subject to disposal only under the homestead, town site, stone and timber, and mining laws of the United States, excepting the sixteenth and thirty-sixth sections in each Congressional township, which shall be reserved for common-school purposes and be subject to the laws of Idaho: *Provided*, That each settler on said lands shall, before making final proof and receiving a certificate of entry, pay to the United States for the lands so taken by him, in addition to the fees provided by law, the sum of three dollars and seventy-five cents per acre for agricultural lands, one-half of which shall be paid within three years from the date of original entry; and the sum of five dollars per acre for stone, timber, and mineral lands, subject to the regulations prescribed by existing laws; but the rights of honorably discharged Union soldiers and sailors, as defined and described in sections twenty-three hundred and four and twenty-three hundred and five of the Revised Statutes of the United States, shall not be abridged except as to the sum to be paid as aforesaid.

That the Commissioner of Indian Affairs be, and he hereby is, authorized to employ a competent surveyor for a period not exceeding two years, at a compensation not exceeding one thousand two hundred dollars per annum, for the purposes stipulated in article four of said agreement, and he is also authorized to purchase two portable saw-mills, as provided in article four.

Surveyor.

That the Secretary of the Interior is hereby authorized to examine the claim of those Indians who served the United States under General O. O. Howard in the late war with Joseph's band of said tribe as scouts, couriers, and messengers, referred to in article ten of said agreement, and also as to the claim of Abraham Brooks, mentioned in said article, and report his findings and recommendations to Congress.

Claims of
scouts to be ex-
amined.

AGREEMENT WITH THE YUMA INDIANS IN CALIFORNIA.

[28 Stat., p. 332.]

SEC. 17. Whereas Washington J. Houston, John A. Gorman, and Peter R. Brady, duly appointed commissioners on the part of the United States, did on the fourth day of December, eighteen hundred and ninety-three, conclude an agreement with the principal men and other male adults of the Yuma Indians in the State of California, which said agreement is as follows:

Agreement
with Yuma In-
dians for cession
of lands in Cali-
fornia.

Articles of agreement made and entered into this 4th day of December, A. D. 1893, at Fort Yuma, on what is known as the Yuma Indian Reservation, in the county of San Diego, State of California, by Washington J. Houston, John A. Gorman, and Peter R. Brady, commissioners on the part of the United States appointed for the purpose, and the Yuma Indians.

ARTICLE I.

The said Yuma Indians, upon the conditions hereinafter expressed, do hereby surrender and relinquish to the United States all their right, title, claim, and interest in and to and over the following-described tract of country in San Diego County, Cal., established by executive order of January ninth, eighteen hundred and eighty-four, which describes its boundaries as follows:

Lands ceded.

"Beginning at a point in the middle of the channel of the Colorado River, due east of the meander corner to sections nineteen and thirty, township fifteen south, range twenty-four east, San Barnadino meridian; thence west on the line between sections nineteen and thirty to the range line, between townships twenty-three and twenty-four east; thence continuing west on the section line to a point which, when surveyed, will be the corner to sections twenty-two, twenty-three, twenty-six, and twenty-seven, in township fifteen south, range twenty-one east; thence south on the line between sections twenty-six and twenty-seven, in township fifteen south, range twenty-one east, and continuing south on the section lines to the intersection of the international boundary, being the corner to fractional sections thirty-four and thirty-five, in township sixteen south, range twenty-one east; thence easterly on the international boundary to the middle of the channel of the Colorado River; thence up said river, in the middle of the channel thereof, to the place of beginning, be, and the same is hereby, withdrawn from settlement and sale and set apart as a reservation for the Yuma and such other Indians as the Secretary of the Interior may see fit to settle thereon: *Provided, however,* That any tract or tracts included within the foregoing-described boundaries to which valid rights have attached under the laws of the United States are hereby excluded out of the reservation hereby made.

Location.

"It is also hereby ordered that the Fort Yuma military reservation be, and the same is hereby, transferred to the control of the Department of the Interior, to be used for Indian purposes in connection with the Indian reservation established by this order, said military reservation having been abandoned by the War Department for military purposes."

ARTICLE II.

Each and every member of said Yuma Indians shall be entitled to select and locate upon said reservation and in adjoining sections five acres of land, which shall be allotted to such Indian in severalty. Each member of said band of Indians over the age of eighteen years

Allotments in
severalty to In-
dians.

shall be entitled to select his or her land, and the father, or, if he be dead, the mother, shall select the land herein provided for for each of his or her children who may be under the age of eighteen years; and if both father and mother of the child under the age of eighteen years shall be dead, then the nearest of kin over the age of eighteen years shall select and locate his or her land; or if such persons shall be without kindred, as aforesaid, then the Commissioner of Indian Affairs, or some one by him authorized, shall select and locate the land of such child.

ARTICLE III.

Allotting.

That the allotments provided for in this agreement shall be made, at the cost of the United States, by a special agent appointed by the Secretary of the Interior for the purpose, under such rules and regulations as the Secretary of the Interior may from time to time prescribe, and within sixty days after such special agent shall appear upon said reservation and give notice to the said Indians that he is ready to make such allotments; and if anyone entitled to an allotment hereunder shall fail to make his or her selection within said period of sixty days then such special agent shall proceed at once to make such selection for such person or persons, which shall have the same effect as if made by the person so entitled; and when all of said allotments are made and approved, then all of the residue of said reservation which may be subject to irrigation, except as hereinafter stated, shall be disposed of as follows: The Secretary of the Interior shall cause the said lands to

Disposal of
lands remaining.

be regularly surveyed and to be subdivided into tracts of ten acres each, and shall cause the said lands to be appraised by a board of three appraisers, composed of an Indian inspector, a special Indian agent, and the agent in charge of the Yuma Indians, who shall appraise said lands, tracts, or subdivisions, and each of them, and report their proceedings to the Secretary of the Interior for his action thereon; and when the appraisement has been approved the Secretary of the Interior shall cause the said lands to be sold at public sale to the highest bidder for cash, at not less than the appraised value thereof, first having given at least sixty days' public notice of the time, place, and terms of sale, immediately prior to such sale, by publication in at least two newspapers of general circulation; and any lands or subdivisions remaining unsold may be reoffered for sale at any subsequent time in the same manner at the discretion of the Secretary of the Interior, and if not sold at such second offering for want of bidders then the Secretary of the Interior may sell the same at private sale at not less than the appraised value.

ARTICLE IV.

Proceeds of
sales.

That the money realized by the sale of the aforesaid lands shall be placed in the Treasury of the United States, to the credit of the said Yuma Indians, and the same, with interest thereof at five per centum per annum, shall be at all times subject to appropriation by Congress, or to application, by order of the President, for the payment of water rents, building of levees, irrigating ditches, laterals, the erection and repair of buildings, purchase of tools, farming implements and seeds, and for the education and civilization of said Yuma Indians.

ARTICLE V.

Trust patents
to allottees.

Upon the approval of the allotments provided for herein by the Secretary of the Interior he shall cause patents to issue therefor in the name of the allottees, which patents shall be of the legal effect and declare that the United States does and will hold the land thus allotted for the period of twenty-five years in trust for the sole use and benefit of the Indian to whom such allotments shall have been made, or in case of his or her decease, to his or her heirs or devisees, according to the laws of California, and that at the expiration of said period the United States will convey the same by patent to said Indian or his heirs or devisees, as aforesaid in fee, discharged of said trust and free of all incumbrance whatsoever.

Conveyances
forbidden.

And if any conveyance shall be made of the lands set apart and allotted as herein provided, or any contract made touching the same before the expiration of the time above mentioned, such conveyance or contract shall be absolutely null and void. And during said period

of twenty-five years these allotments and improvements thereon shall not be subject to taxation for any purpose, nor subject to be seized upon any execution or other legal process, and the law of descent and partition in force in California shall apply thereto.

ARTICLE VI.

All lands upon said reservation that can not be irrigated are to be open to settlement under the general land laws of the United States. Lands open to settlement.

ARTICLE VII.

There shall be excepted from the operation of this agreement a tract of land, including the buildings, situate on the hill on the north side of the Colorado River, formerly Fort Yuma, now used as an Indian school, so long as the same shall be used for religious, educational, and hospital purposes for said Indians, and a further grant of land adjacent to the hill is hereby set aside as a farm for said school; the grant for the school site and the school farm not to exceed in all one-half section, or three hundred and twenty acres. Indian school reserved.

ARTICLE VIII.

This agreement shall be in force from and after its approval by the Congress of the United States. Ratification.

In witness whereof we have hereunto set our hands and seals the day and year first above written.

WASHINGTON J. HOUSTON, [SEAL.]
JOHN A. GORMAN, [SEAL.]
PETER R. BRADY, [SEAL.]

Commissioners on the part of the United States.

BILL MOJAVE, and others.

Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the said agreement be, and the same hereby is, accepted, ratified, and confirmed. Agreement confirmed.

That for the purpose of making the allotments provided for in said agreement, including the payment and expenses of the necessary special agent hereby authorized to be appointed by the Secretary of the Interior, and for the necessary resurveys, there be, and hereby is, appropriated, out of any money in the Treasury not otherwise appropriated, the sum of two thousand dollars, or so much thereof as may be necessary. Appropriation for allotting.

That for the purpose of defraying the expenses of the survey and sale of the lands by said agreement relinquished and to be appraised and sold for the benefit of said Indians, the sum of three thousand dollars, or so much thereof as may be necessary, be, and the same hereby is, appropriated, out of any money in the Treasury not otherwise appropriated, the same to be reimbursed to the United States out of the proceeds of the sale of said lands. Expenses of survey and sale.

That the right of way through the said Yuma Indian Reservation is hereby granted to the Southern Pacific Railroad Company for its line of railroad as at present constructed, of the same width, with the same rights and privileges, and subject to the limitations, restrictions, and conditions as were granted to the said company by the twenty-third section of the Act approved March third, eighteen hundred and seventy-one, entitled "An Act to incorporate the Texas Pacific Railroad Company, and to aid in the construction of its road, and for other purposes:" Right of way to Southern Pacific Railroad Company.

Provided, That said company shall, within ninety days from the passage of this Act, file with the Secretary of the Interior a map of said right of way, together with a relinquishment by said company of its right of way through said reservation as shown by maps of definite location approved January thirty-one, eighteen hundred and seventy-eight. Vol. 16, p. 579.

The Secretary of the Interior is hereby authorized and directed to cause all the lands ceded by said agreement which may be susceptible of irrigation, after said allotments have been made and approved, and said lands have been surveyed and appraised, and the appraisal approved, to be sold at public sale, by the officers of the land office in the district wherein said lands are situated, to the highest bidder for cash, Proviso. Map to be filed.

Sale of irrigable lands at auction.

- at not less than the appraised value thereof, after first having given at least sixty days' public notice of the time, place, and terms of sale immediately prior to such sale, by publication in at least two newspapers of general circulation, and any lands or subdivisions remaining unsold may be reoffered for sale at any subsequent time in the same manner, at the discretion of the Secretary of the Interior, and if not sold at such second offering for want of bidders, then the Secretary may cause the same to be sold at private sale at not less than the appraised value. The money realized from the sale of said lands, after deducting the expenses of the sale of said lands, and the other money for which provision is made for the reimbursement of the United States, shall be placed in the Treasury of the United States to the credit of said Yuma Indians, and shall draw interest at the rate of five per centum per annum, and said principal and interest shall be subject to appropriation by Congress, or to application by the President of the United States for the payment of water rents, the building of levees, irrigating ditches and laterals, the purchase of tools, farming implements, and seeds, and for the education and civilization of said Indians: *Provided, however*, That none of said money realized from the sale of said lands, or any of the interest thereon, shall be applied to the payment of any judgment that has been or may hereafter be rendered on claims for damages because of depredations committed by said Indians prior to the date of the agreement herein ratified.
- Private sale.** That all of the lands ceded by said agreement which are not susceptible of irrigation shall become a part of the public domain, and shall be opened to settlement and sale by proclamation of the President of the United States, and be subject to disposal under the provisions of the general land laws.
- Proceeds to credit of Yuma Indians. Interest.** That the Colorado River Irrigating Company, which was granted a right of way for an irrigating canal through the said Yuma Indian Reservation by the Act of Congress approved February fifteenth, eighteen hundred and ninety-three, shall be required to begin the construction of said canal through said reservation within three years from the date of the passage of this Act, otherwise the rights granted by the Act aforesaid shall be forfeited.
- Proviso. Prior depredation claims.** That the Secretary of the Interior shall have authority from time to time to fix the rate of water rents to be paid by the said Indians for all domestic, agricultural, and irrigation purposes, and in addition thereto each male adult Indian of the Yuma tribe shall be granted water for one acre of the land which shall be allotted to him, if he utilizes the same in growing crops, free of all rent charges during the period of ten years, to be computed from the date when said irrigation company begins the delivery of water on said reservation.
- Lands open under general laws.** SEC. 18. That the approval of Congress is hereby given to "An Act to adopt the negroes of the Chickasaw Nation," and so forth, passed by the legislature of the Chickasaw Nation and approved by the governor thereof January tenth, eighteen hundred and seventy-three, particularly set forth in a letter from the Secretary of the Interior transmitting to Congress a copy of the aforesaid Act, contained in House Executive Document Numbered Two hundred and seven, Forty-second Congress, third session.
- Irrigating canal. Construction. Vol. 27, p. 456.** SEC. 19. That the right of commutation is hereby extended to all bona fide homestead settlers on the lands in Oklahoma Territory opened to settlement under the provisions of the Act of Congress entitled "An Act making appropriations for current and contingent expenses and fulfilling treaty stipulations with Indian tribes for the fiscal year ending June thirtieth, eighteen hundred and ninety-four," approved March third, eighteen hundred and ninety-three, and the President's proclamation in pursuance thereof, after fourteen months from the date of settlement upon the full payment for the lands at the prices provided in said Act.
- Water rents.** And the Secretary of the Treasury is hereby authorized to issue to the Cherokee Nation or to its assigns evidences of indebtedness of the United States of America, bearing interest at the rate of four per centum per annum, payable annually on the fourth day of March of each year, in amounts of one thousand and ten thousand dollars, respectively, for the respective amounts of the second, third, fourth, and fifth installments, maturing respectively on the fourth day of March, eighteen hundred and ninety-six, the fourth day of March, eighteen hundred and ninety-seven, the fourth day of March, eighteen hundred and ninety-
- 28 Stats., p. 336.**
- Act of Chickasaw Nation adopting negroes approved.**
- Commutation by settlers in Oklahoma. Vol. 27, p. 640.**
- Cherokee Nation. Bonds to be issued for paying installments.**

eight, and the fourth day of March, eighteen hundred and ninety-nine, and amounting in the aggregate to six million six hundred and forty thousand dollars, as specified in said Act of March third, eighteen hundred and ninety-three; and this provision shall not be construed to extend the time nor to increase the amount of the liability of the Government as provided in section ten of the said Act of March third, eighteen hundred and ninety-three.

Vol. 27, p. 640.

SEC. 20. That the President of the United States is hereby authorized and directed to appoint a commission of three persons to allot in severalty to the Uncompaghre Indians within their reservation, in the Territory of Utah, agricultural and grazing lands according to the treaty of eighteen hundred and eighty, as follows:

Uncompaghre Indians, Utah.

Vol. 21, p. 200.

"Allotments in severalty of said lands shall be made as follows: To each head of a family one-quarter of a section, with an additional quantity of grazing land not exceeding one-quarter of a section; to each single person over eighteen years of age, one-eighth of a section, with an additional quantity of grazing land not exceeding one-eighth of a section; to each orphan child under eighteen years of age, one-eighth of a section, with an additional quantity of grazing land not exceeding one-eighth of a section; to each other person under eighteen years of age, born prior to such allotment, one-eighth of a section, with a like quantity of grazing land: *Provided*, That, with the consent of said commission, any adult Indian may select a less quantity of land, if more desirable on account of location: *And provided*, That the said Indians shall pay one dollar and twenty-five cents per acre for said lands from the fund now in the United States Treasury realized from the sale of their lands in Colorado as provided by their contract with the Government. All necessary surveys, if any, to enable said commission to complete the allotments shall be made under the direction of the General Land Office. Said commissioners shall, as soon as practicable after their appointment, report to the Secretary of the Interior what portions of said reservation are unsuited or will not be required for allotments, and thereupon such portions so reported shall, by proclamation, be restored to the public domain and made subject to entry as hereinafter provided.

Allotments in severalty.

CHAP. 311.—An act granting to the Northern Mississippi Railway Company right of way through certain Indian reservations in Minnesota.

August 23, 1894.

28 Stat., p. 489.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby granted to the Northern Mississippi Railway Company, a corporation organized and existing under the laws of the State of Minnesota, and its assigns the right of way for the extension of its railroad through the Leech Lake Indian, Chippewa Indian, and Winnebagoish Indian reservations, in the State of Minnesota; such right of way to be fifty feet in width on each side of the center line of said railroad; and said company shall also have the right to take from the land adjacent to the line of said road materials, stone, and earth necessary for the construction of said railroad; also ground adjacent to such right of way for station buildings, depots, machine shops, side tracks, turn-outs, and water stations, not to exceed in amount two hundred feet in width and three thousand feet in length for each station, to the extent of one station for every ten miles of road constructed within the limits of said reservations: *Provided*, That no part of such lands herein granted shall be used except in such manner and for such purposes only as are necessary for the construction and convenient operation of said railroad line, and when any portion thereof shall cease to be used such portion shall revert to the nation or tribe of Indians from which the same shall be taken.

- Damages.** SEC. 2. That it shall be the duty of the Secretary of the Interior to fix the amount of compensation to be paid to the Indians for such right of way and provide the time and manner for the payments thereof; and also to ascertain and fix the amount to be paid to individual members of the tribe for damages, if any, by them sustained by reason of the construction of said road. But no right of way of any kind shall vest in said railway company in or to any part of the right of way herein provided for until plats thereof, made upon actual survey for the definite location of such railroad, and including the grounds for station houses, depots, machine shops, side tracks, turn-outs, and water stations, shall have been approved by the Secretary of the Interior, and until the compensation aforesaid shall have been fixed and paid, and the consent of the Indians on such reservations, as to the amount of said compensation and right of way, shall have been first obtained in a manner satisfactory to the President of the United States. Said company is hereby authorized to enter upon said reservations for the purpose of surveying and locating its line of railroad, provided that said line of railroad shall be located, constructed, and operated with due regard to the rights of the Indians, and under such rules and regulations as the Secretary of the Interior shall prescribe.
- Plats, etc., to be approved.**
- Compensation.**
- Survey, etc.**
- Construction.** SEC. 3. That the rights herein granted shall be forfeited by said company unless the road is constructed through said reservations within three years.
- Amendment.** SEC. 4. That Congress may at any time amend, add to, alter, or repeal this Act.

Approved, August 23, 1894.

August 24, 1894. CHAP. 330.—An act to authorize purchasers of the property and franchises of the Choctaw Coal and Railway Company to organize a corporation and to confer upon the same all the powers privileges, and franchises vested in that company.

- Preamble.** Whereas the Choctaw Coal and Railway Company, a corporation created under and by virtue of the laws of the State of Minnesota, and now doing business in the Indian Territory and Oklahoma Territory under and by virtue of certain Acts of Congress empowering it so to do, is insolvent, and in order to enable the creditors and stockholders of the same to reorganize said company in such a way as to secure the completion of the railroad authorized to be constructed by said company, a sale of its property and franchises is necessary: Therefore,
Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the purchasers of the rights of way, railroads, mines, coal leasehold estates, and other property, and the franchises of the said Choctaw Coal and Railway Company at any sale made under or by virtue of any process or decree of any court having jurisdiction thereof, shall be, and are hereby, constituted a corporation and shall be vested with all the right, title, interest, property, possession, claim, and demand in law and equity, of, in, and to such rights of way, railroads, mines, coal leasehold estates, and property of the said Choctaw Coal and Railway Company, and with all the rights, powers, immunities, privileges, and franchises which have been heretofore granted to or conferred upon said company by any Act or Acts of Congress, or which it possesses by virtue of its charter under the laws of Minnesota: *Provided,* That such new corporation shall not have the right to acquire and hold any houses or buildings at South McAlester situate off the right of way and depot grounds of said Choctaw Coal and Railway Company.

- Organization of new corporation.** SEC. 2. That the said purchasers of the hereinbefore-mentioned property of the said Choctaw Coal and Railway Company shall meet within thirty days after the conveyance thereof shall have been delivered to them, and organize such new corporation by electing a president and board of nine directors (to continue in office until the second Monday of January succeeding such meeting, when, and annually thereafter, on the said day, a like election for a president and nine directors shall be held to serve for one year), and shall adopt a corporate name and common seal, determine the amount of capital stock and bonds to be issued to the persons for or on whose account said property may have been purchased, and shall have power and authority to make and issue certificates for the said capital stock in shares of fifty dollars each and bonds, and may then, or at any time
- Capital, etc.**

thereafter, create and issue preferred stock to such an amount and on such terms as they may deem necessary, and from time to time may issue bonds and may secure all bonds by one or more mortgages upon the real and personal property and corporate rights and franchises, or either or any part or parts thereof: *Provided*, That the capital stock shall not be fixed at an amount in excess of the capital of the said Choctaw Coal and Railway Company, and that no bonds shall be issued except for value received in cash or property.

Proviso.
Stock limit.

SEC. 3. That it shall be the duty of such new corporation, within one calendar month after its organization, to make a certificate thereof under its common seal, attested by the signature of its president, specifying the date of such organization, the name so adopted, the amount of capital stock, and the names of its president and directors, and transmit the said certificate to the Secretary of the Interior, to be filed in his office, and there remain of record; and a certified copy of such certificate so filed shall be evidence of the corporate existence of said new corporation. And such new corporation shall also, within the said calendar month, cause to be filed in the office of the Secretary of the Interior a copy certified to as correct by the clerk of the court under whose orders or decrees said sale shall have been made, of any conveyance made to it under or by virtue of said sale of the rights of way, railroads, mines, coal leasehold estates, and other property of the said Choctaw Coal and Railway Company, and this Act shall be construed and treated as an assent upon the part of the United States to the acquisition and holding by such new corporation of the estates and premises thereby conveyed, subject to the right of said corporation to thereafter acquire, and hold such additional property as it may lawfully do by virtue hereof: *Provided*, however, That as to all coal leasehold estates or leases of coal claims or rights to mine coal in the Choctaw Nation, such assent shall be upon condition that the said new corporation shall conform to all the provisions, conditions, and limitations contained in the Act approved October first, eighteen hundred and ninety, entitled "An Act giving, upon conditions and limitations therein contained, the assent of the United States to certain leases of right to mine coal in the Choctaw Nation."

Certificate of
organization,
etc., to be filed.

Proviso.
Coal lease.

Vol. 26, p. 640.

SEC. 4. That it shall and may be lawful for such new corporation to construct and operate branches from its said railroad and for such purpose to take and use rights of way not exceeding one hundred feet in width upon making compensation therefor as provided in the case of taking land for its main line, and to lease its railroads and mines and other property to any company owning or operating a railroad connecting with the railroad of said new corporation on such terms and conditions as may be agreed upon: *Provided*, That the right to construct branches conferred by this section shall exist and be exercised in the Indian Territory only for the purpose of developing and working the leases mentioned in the Act of Congress of October first, eighteen hundred and ninety.

Construction
of branch roads.

Proviso.
Condition.

SEC. 5. That the said corporation, when organized as hereinbefore provided, shall have and possess perpetual succession and shall be able to sue and be sued, plead and be impleaded, in all courts of record and elsewhere, and shall have power to ordain, establish, and put in execution such by-laws and regulations as shall be proper, necessary, or convenient for the government of the said corporation, not being contrary to the Constitution and laws of the United States, and generally to do all and singular the matters and things which shall be necessary or convenient to enable the said company to maintain, use, and operate their railroads and mines which it may become possessed of by virtue hereof in conformity with the provisions of the Acts of Congress relating to or affecting the Choctaw Coal and Railway Company.

Corporate
rights.

SEC. 6. That the stockholders of the company shall meet on the second Monday in January in every year at such place as may be fixed on by the by-laws, notice of which meeting shall be given in the manner that may be designated by the by-laws, and choose, by a majority of the voters present or represented, a president and nine directors for the ensuing year, who shall continue in office until the next annual election and until others are chosen; at which annual meeting the said stockholders shall have full power and authority to make, order, or repeal, by a majority of votes given, any or all such by-laws, rules, orders, and regulations as aforesaid, and to do and perform every

Annual elec-
tion of officers.

Action on by-
laws, etc.

Meetings.	other corporate act authorized by their charter; the stockholders may meet at such other times and places as they may be summoned by the president and directors, in such manner and form and giving such notice as may be prescribed by the by-laws. At all meetings stockholders may be represented and vote by proxy.
Manner of elections.	SEC. 7. That the election for president and directors provided for in this Act shall be conducted as follows: The directors for the time being shall appoint three stockholders to be judges of the said election and to hold the same; the persons so appointed shall not be eligible to an election as president or director at said election and shall, respectively, take and subscribe an oath or affirmation before a notary public or other officer qualified to administer oaths well and truly and according to law to conduct such election to the best of their knowledge and ability; and the said judges shall decide upon the qualifications of voters and when the election is closed shall count the votes and declare who have been elected; and if at any time it shall happen that an election of directors shall not be made at the time specified, the corporation shall not for that reason be dissolved, but it shall be lawful to hold and make such election of directors on any day within three months thereafter by giving at least ten days' previous notice of the time and place of holding said election in the manner aforesaid, and the directors of the preceding year shall in that case continue in office, and be invested with all powers belonging to them as such until others are elected in their stead. In case of the death or resignation of a director or a failure to elect in case of a tie vote, the vacancy may be filled by the board of directors. At all general meetings or elections by the stockholders, each share of stock shall entitle the holder thereof to one vote, and each ballot shall have indorsed thereon the number of shares represented; but no share or shares transferred within sixty days next preceding any election or general meeting of the stockholders shall entitle the holder or holders thereof to vote at any such election or general meeting, nor shall any proxy be received or entitle the holder to vote unless the same shall bear date and have been duly executed within the three months next preceding such election or general meeting.
Vacancies.	
Votes of shareholders.	
Amendments, etc.	SEC. 8. That Congress may at any time amend, alter, or repeal this Act.

Approved, August 24, 1894.

August 27, 1894. CHAP. 342.—An act granting to the Duluth and Winnipeg Railroad Company a right of way through the Chippewa and White Earth Indian reservations in the State of Minnesota. 28 Stats., p. 504.

Duluth and Winnipeg Railroad Company granted right of way, Chippewa and White Earth reservations, Minn.	<i>Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,</i> That there is hereby granted to the Duluth and Winnipeg Railroad Company, a corporation organized and existing under the laws of the State of Minnesota, and to its assigns, the right of way for the extension of its railroad, and for a telegraph and telephone line, through the Chippewa and White Earth Indian reservations in said State, commencing at some point on its already constructed line in said State and running in a general westerly or northwesterly direction, by such route as shall be deemed advisable, to some point on the western boundary line of the said State, or to some point on the northern boundary line thereof, between the Red River of the North and the Lake of the Woods, or to both such points. Such right of way shall be fifty feet in width on each side of the central line of said railroad, and said company shall also have the right to take from the lands adjacent to the line of said road material, stone, and earth necessary for the construction of said railroad; also grounds adjacent to such right of way for station buildings, depots, machine shops, side tracks, turn-outs, and water stations, not to exceed in amount two hundred feet in width and three thousand feet in length for each station, and to an extent not exceeding one station for each ten miles of road within the limits of said reservations: <i>Provided</i> , That no part of such lands herein granted shall be used except in such manner and for such purposes only as are necessary for the construction and convenient operation of said railroad line, and when any portion thereof shall cease to be used, such portion shall revert to the nation or tribe of Indians from which the same shall be taken.

CHAP. 346.—An act Authorizing the issue of a patent to the Presbyterian Board of Home Missions for certain lands on the Omaha Indian reservation for school purposes.

August 27, 1894.

28 Stats., p. 507.

Whereas the location of the old mission school on the Omaha Indian reservation, in the State of Nebraska, has become unsuitable for school purposes, and it being necessary to replace the buildings thereon by such as shall be more convenient and commodious, the Presbyterian Board of Home Missions propose to relinquish all claims to the land situate in section twelve, township twenty-five, range nine east of the sixth principal meridian, on said reservation, in the State of Nebraska, occupied for mission purposes for nearly forty years, to the United States, the same to become a part of the reservation wherein it is located; and

Preamble.

Whereas the Omaha Indians, in consideration of said relinquishment and the promise of said board to erect on a proposed new site a building, to be used for school purposes, of the value of seven thousand five hundred dollars, for the benefit of the children and youth of the Omahas, have agreed to relinquish to said board all their right and title in

and to the following-described land, for the purpose above named, to wit: the southwest quarter of northeast quarter and west half of southeast quarter and northeast quarter of southeast quarter of fractional section numbered twenty-nine, township twenty-five, range eight east, of the sixth principal meridian, on said Omaha reservation, in Thurston County, Nebraska: Therefore,

Omaha Indian Reservation, Nebr. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the President of the United States of America, upon the execution by the Presbyterian Board of Home Missions of a patent to the United States of the lands now occupied by them, as described in the first preamble herein, is

Patent to issue for Presbyterian school, etc., site.

hereby authorized and directed to issue to the Presbyterian Board of Home Missions a patent for the following-described land, to wit: the southwest quarter of northeast quarter and west half of southeast quarter and northeast quarter of southeast quarter of fractional section numbered twenty-nine, township twenty-five, range eight east of the sixth principal meridian, on the Omaha Indian reservation, in Thurston County, Nebraska, containing one hundred and sixty acres, more or less, to have and to hold the same, so long as the said Presbyterian Board of Home Missions shall use and occupy the premises for educational, charitable, and religious purposes, and no longer.

Patents.

Approved, December 19, 1893.

March 31, 1894. [No. 16.] Joint resolution authorizing and directing the Secretary of the Treasury to receive at the sub-treasury in the city of New York from R. T. Wilson & Company, or assigns, the money amounting to six million seven hundred and forty thousand dollars, to be paid to the Cherokee Nation, and to place the same to the credit of the Cherokee Nation.
28 Stats., p. 579.

Preamble.

Whereas, by an Act of the national Council of the Cherokee Nation approved January sixth, eighteen hundred and ninety-four, said Cherokee Nation accepted an offer of R. T. Wilson & Company, to purchase and agreed to sell and assign to said R. T. Wilson and Company, and assigns, the second, third, fourth and fifth installments of the money, together with the interest thereon, from the fourth day of March, eighteen hundred and ninety-three, to be paid by the United States to said Cherokee Nation for the Cherokee outlet as provided by a contract made pursuant to section ten of "An Act making appropriations for current and contingent expenses and fulfilling treaty stip-

Vol. 27, p. 640.

ulations with Indian tribes for fiscal year ending June thirtieth, eighteen hundred and ninety-four," approved March third, eighteen hundred and ninety-three, and in accordance with the provisions of said Act of the National Council of the Cherokee Nation the consideration for said sale and assignment amounting to six million seven hundred and forty thousand dollars was to be placed in the sub-treasury of the United States in the city of New York to the credit of the Cherokee Nation subject to the action of the national council of said Cherokee Nation, and

Whereas, it is necessary in order to carry out said contract that authority be conferred to receive said money at the sub-treasury in New York and to place the same to the credit of said Cherokee Nation, Therefore,

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be and he hereby is authorized and directed to receive at the sub-treasury in the city of New York from R. T. Wilson and Company, or assigns, the said money so to be paid to said Cherokee Nation in consideration of said assignment and to place the same to the credit of said Cherokee Nation.

[No. 17.] Joint resolution authorizing the Secretary of the Interior to cause the settlement of the accounts of Special Agents Moore and Woodson, under the treaty of eighteen hundred and fifty-four, with the Delaware Indians, and so forth.

April 2, 1894.

28 Stats., p. 580.

Whereas the accounts of Ely Moore, deceased, as special register and superintendent, and of Daniel Woodson, as special receiver and superintendent, for the expenses of the sale of the Iowa, and of the eastern and western portions of the Delaware, and of the Wea, and so forth, Indian trust lands in Kansas, under the several treaties of May, eighteen hundred and fifty-four, with said Indians, require further adjustment and final settlement: Therefore,

Preamble.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior be, and he is hereby, authorized and required to cause administrative action to be taken upon the accounts of said Moore and Woodson, and to allow to the said Moore the sum of three thousand six hundred and fifty-eight dollars, and to the said Woodson the sum of three thousand six hundred and ninety-seven dollars and eighty-four cents, in full settlement and satisfaction of their respective claims for services under the treaties aforesaid, and pass the said accounts to the proper accounting officers of the Treasury for final settlement; and the acceptance of the said sums by said claimants, or their legal representatives, shall be taken as a full and complete relinquishment and satisfaction of their claims for services under the treaties aforesaid.

Ely Moore and
Daniel Woodson.

Allowance to
settle claims for
services, sale of
Indian lands in
Kansas.

Acceptance.

Approved, April 2, 1894.

[No. 42.] Joint resolution authorizing proper officers of the Treasury Department to examine and certify claims in favor of certain counties in Arizona.

August 6, 1894.

28 Stats., p. 589.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the First Auditor and the First Comptroller of the Treasury be, and they are hereby, authorized to examine all claims which may be presented in proper form by the different counties in Arizona Territory, and to ascertain the amount due to each of said counties on account of legal costs and expenses incurred from March third, eighteen hundred and eighty-nine, to June thirtieth, eighteen hundred and ninety-three, in the prosecution of Indians under the Act of March third, eighteen hundred and eighty-five, Twenty-third Statutes, page three hundred and eighty-five, for which the United States is liable under Act of March third, eighteen hundred and eighty-nine, Statutes at Large, volume twenty-five, page one thousand and four; and which have been paid by said counties; and the amounts so found due shall be certified by the Secretary of the Treasury to the Speaker of the House of Representatives for a deficiency appropriation.

PRIVATE ACTS.

August 15, 1894. CHAP. 297.—An act to enable the Secretary of the Interior to pay John T. Heard for professional services rendered the "Old Settlers" or Western Cherokee Indians out of the funds of said Indians.

John T. Heard. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the interior be, and he is hereby, authorized and directed to pay to John T. Heard, for professional services rendered, out of any moneys appropriated or to be appropriated by Congress for the "Old Settlers" or Western Cherokee Indians, by reason of a judgment rendered June sixth, eighteen hundred and ninety-three, by the Court of Claims, in favor of the "Old Settlers" or Western Cherokee Indians, in case numbered sixteen thousand five hundred and ninety-nine, for certain moneys and lands due, arising from or growing out of certain treaty stipulations or Acts of Congress, amounting to eight hundred thousand three hundred and eighty-six dollars and thirty-one cents, in compliance with the mandate of the Supreme Court of the United States, the sum of ten thousand dollars, or such part thereof, if any, as shall remain of the thirty-five per centum set apart by resolution in various councils of said "Old Settlers" or Western Cherokee Indians, for the expense of the prosecution of said claim, after the ascertainment and determination of the amount of such fees and charges and other claims as are properly chargeable against said thirty-five per centum: *Provided,* That the Secretary of the Interior shall first determine that the said professional services were rendered to said "Old Settlers" or Western Cherokee Indians, and were contracted for in good faith by persons authorized to represent said Indians.

Public Laws,
p. 451.

Proviso.
Examination.

Approved, August 15, 1894.

August 24, 1894. CHAP. 331.—An act granting a pension to Jesse Davenport, of Company A, Second Regiment Oregon Mounted Volunteers, in Oregon Indian wars of eighteen hundred and fifty-five and eighteen hundred and fifty-six.

Jesse Davenport. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Interior be, and he is hereby, authorized and directed to place on the pension roll the name of Jesse Davenport, of Roseburg, Oregon, and late of Company A, commanded by Captain Edward Sheffield, Second Regiment Oregon Mounted Volunteers, commanded by Colonel John Kelsay, in the Oregon Indian wars of eighteen hundred and fifty-five and eighteen hundred and fifty-six, and pay him a pension at the rate of twelve dollars per month.

Pension.

Approved, August 24, 1894.

August 24, 1894. CHAP. 339.—An act for the relief of P. W. Mitchell, M. C. Felmet, George H. Smathers, and others.

Eastern Band Cherokee Indians. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Treasury is hereby authorized and directed to pay, out of any funds in the Treasury belonging to the Eastern Band of Cherokee Indians, to the following persons, to wit: P. W. Mitchell, one hundred and twenty-nine dollars; M. C. Felmet, one hundred and fifty dollars; George H. Smathers, seventy-seven dollars and fifty cents; David Blythe, thirty dollars; Jesse Reed, seven dollars; William Locust, seventeen dollars, and George French, five dollars.

Payment from funds of, to P. W. Mitchell, etc.

Approved, August 24, 1894.

TRUST FUNDS AND TRUST LANDS.

The following statements show the transactions in the Indian trust funds and trust lands during the year ending October 31, 1894.

Statements A, B, C, D, and E show in detail the stocks, funds in the Treasury to the credit of various tribes, and collections of interest.

A statement is given of all the interest collected, and a statement of interest appropriated by Congress on nonpaying State stocks for the fiscal year ending June 30, 1894.

A statement also will be found showing the transactions arising on account of moneys derived from the sales of Indian lands.

A.—List of names of Indian tribes for whom stock is held in trust by the Secretary of the Interior (Treasurer of the United States, custodian), showing the amount standing to the credit of each tribe, the annual interest, and the date of the treaty or law under which the investment was made.

Tribe.	Treaty or act.	Statutes at Large.		Amount of stock.	Annual interest.
		Vol.	Page.		
Cherokee national fund	Dec. 29, 1835	7	478	\$156, 638. 56	\$9, 398. 31
Cherokee school fund	Feb. 27, 1819	7	195	51, 854. 28	3, 111. 26
	Dec. 29, 1835	7	498		
Cherokee orphan fund	Dec. 29, 1835	7	478	22, 223. 26	1, 333. 40
	Feb. 14, 1873	17	462		
Total.....				230, 716. 10	13, 842. 97

NOTE.—The reduction of the amount of stock held in trust, as shown by the last annual report, was caused by the appropriation by Congress, by act approved August 15, 1894, of the face value of all State stocks held in trust for the Cherokees, Chickasaws, Choctaws, Iowas, and Menomonees, including the face value of abstracted bonds belonging to the Cherokee Nation, aggregating the sum of \$1,330,666.67. This sum is on deposit in the Treasury to the credit of the tribes interested, and is drawing interest at 5 per cent per annum, as directed by the above act of August 15, 1894. (See page 532, annual report for 1893, for description of State stocks above referred to.)

B.—Statement of stock account, exhibiting the securities in which the funds of the Cherokee Nation are invested and now on hand, and the annual interest on the same.

Stocks.	Per cent.	Original amount.	Amount on hand.	Annual interest.

† See Senate Ex. Doc. 13, First Session, Fifty-second Congress.

The changes in the statement of funds held by the Government in lieu of investment are accounted for as follows, viz:

The funds have been increased by—

The capitalization by act approved August 15, 1894, of the annuities heretofore appropriated under "fulfilling treaties with Shawnees," and carried to the credit of the Cherokee Nation, under agreement between the Shawnees and the Cherokees, dated June 7, 1869, the same being apportioned as follows:

Cherokee national fund	\$50,000.00
Cherokee school fund	35,000.00
Cherokee orphan fund	15,000.00

The appropriation by act approved August 15, 1894, of the face value of certain non-paying state stocks held in trust by the Government, and abstracted bonds, for the Cherokees, Choctaws, Chickasaws, Iowas, and Menomonees, as shown on page 532, annual report of the Commissioner of Indian Affairs for 1893, the same being apportioned as follows:

Cherokee national fund	446,000.00
Cherokee school fund	26,000.00
Chickasaw national fund	338,666.67
Choctaw general fund	450,000.00
Iowa fund	51,000.00
Menomonee fund	19,000.00

Proceeds of sale of lands, viz:

Cherokee school lands	401.23
Kansas Indian lands	1,777.01
Menomonee logs	89,105.22
Omaha lands	5,283.84
Osage lands	3,997.29
Otoe and Missouri lands	2,571.54
Pawnee lands	2,840.31
Shoshone and Bannack lands	310.00
Umatilla lands	4,098.54
Nez Percé lands	1,000,000.00
Round Valley lands (California)	2,312.04
Siletz Indian lands (Oregon)	122,600.00
Sioux Indian lands	3,000,000.00
Tonkawa Indian lands	25,725.00
Yankton Sioux lands	500,000.00

Total..... 6,191,688.69

The funds have been decreased by—

The transfer of \$20,406.25 from the Cherokee national fund to the Choctaw orphan fund by act approved March 3, 1893..... 20,406.25

Expenditures from—

Crow fund	15,424.46
Kickapoo 4 per cent fund	53.39
Kickapoo general fund	464.19
Kickapoo treaty fund	3,378.30
Menomonee log fund	15,827.07
Osage fund (United States)	6,097.90

Transfer of Shawnee funds to Cherokees..... 40,000.00

Payment of Eastern Shawnee fund..... 9,079.12

Reimbursement to the United States, etc., of Umatilla general fund..... 48,427.77

Expenditure from Umatilla school fund..... 3,097.45

Total..... 162,255.90

Total amount of increase..... 6,191,688.69

Total amount of decrease..... 162,255.90

Net increase..... 6,029,432.79

Amount reported in Statement D, November, 1893..... 27,323,464.25

Add amount of net increase..... 6,029,432.79

Total, as before stated..... 33,352,897.04

E.—Interest collected on United States bonds.

*Lands upon Indian reservations occupied by religious societies for civilizing, educational, and religious purposes.**

[The grants, except in few instances, do not convey the fee simple of the property, but the right of occupancy for the aforesaid purposes.]

NOTE.—In some cases the favorable action of the Indians is still wanting in order to complete the validity of the grants; in others the Government authorization is not clear.

DECISIONS OF UNITED STATES SUPREME COURT ON RIGHTS OF DELAWARES AND SHAWNEES IN CHEROKEE NATION, AND ON CLAIM OF SHAWNEES VS. UNITED STATES.

SUPREME COURT OF THE UNITED STATES.

[No. 619.—October term, 1894.]

The Cherokee Nation and the United States, appellants, *v.* Charles Journeycake, principal chief of the Delaware Indians, appellee. Appeal from the Court of Claims.

[November 19, 1894.]

On July 19, 1866, the United States and the Cherokee Nation entered into a treaty (14 Stat., 799), the fifteenth article of which is as follows:

"The United States may settle any civilized Indians, friendly with the Cherokees and adjacent tribes, within the Cherokee country, on unoccupied lands east of the ninety-sixth degree, on such terms as may be agreed upon by any such tribe and the Cherokees, subject to the approval of the President of the United States, which shall be consistent with the following provisions, viz: Should any such tribe or band of Indians settling in said country abandon their tribal organization, there being first paid into the Cherokee national fund a sum of money which shall sustain the same proportion to the then existing national fund that the number of Indians sustain to the whole number of Cherokees then residing in the Cherokee country, they shall be incorporated into and ever after remain a part of the Cherokee Nation, on equal terms in every respect with native citizens. And should any such tribe thus settling in said country decide to preserve their tribal organizations and to maintain their tribal laws, customs, and usages, not inconsistent with the constitution and laws of the Cherokee Nation, they shall have a district of country set off for their use by metes and bounds equal to 160 acres, if they should so decide, for each man, woman, and child of said tribe, and shall pay for the same into the national fund such price as may be agreed on by them and the Cherokee Nation, subject to the approval of the President of the United States, and in cases of disagreement the price to be fixed by the President.

"And the tribe thus settled shall also pay into the national fund a sum of money to be agreed on by the respective parties, not greater in proportion to the whole existing national fund and the probable proceeds of the lands herein ceded or authorized to be ceded or sold than their numbers bear to the whole number of Cherokees then residing in said country, and thence afterwards they shall enjoy all the rights of native Cherokees. But no Indians who have no tribal organizations, or who shall determine to abandon their tribal organizations, shall be permitted to settle east of the ninety-sixth degree of longitude without the consent of the Cherokee national council, or of a delegation duly appointed by it, being first obtained. And no Indians who have and determine to preserve their tribal organizations shall be permitted to settle, as herein provided, east of the ninety-sixth degree of longitude without such consent being first obtained, unless the President of the United States, after a full hearing of the objections offered by said council or delegation to such settlement, shall determine that the objections are insufficient, in which case he may authorize the settlement of such tribe east of the ninety-sixth degree of longitude."

Prior to that time, and in 1839, the Cherokee Nation had adopted a constitution, section 2 of Article I and section 5 of Article III being in these words:

"SEC. 2. The lands of the Cherokee Nation shall remain common property, but the improvements made thereon and in the possession of the citizens of the nation are the exclusive and indefeasible property of the citizens respectively who made or may rightfully be in possession of them: *Provided*, That the citizens of the nation possessing exclusive and indefeasible right to their improvements, as expressed in this article, shall possess no right or power to dispose of their improvements in any manner whatever to the United States, individual States, or to individual citizens thereof; and that whenever any citizen shall remove with his effects out of the limits of this nation and become a citizen of any other government, all his rights and privileges as a citizen of this nation shall cease: *Provided, nevertheless*, That the national council shall have power to readmit, by law, to all the rights of citizenship any such person or persons who may at any time desire to return to the nation, on memorializing the national council for such readmission."

"SEC. 5. No person shall be eligible to a seat in the national council but a free Cherokee male citizen who shall have attained to the age of twenty-five years.

"The descendants of Cherokee men by all free women, except the African race, whose parents may have been living together as man and wife, according to the customs and laws of this nation, shall be entitled to all the rights and privileges of this nation as well as the posterity of Cherokee women by all free men. No person who is of negro or mulatto parentage, either by the father's or the mother's side, shall be eligible to hold any office of profit, honor, or trust under this government." (Const. and Laws, Cherokee Nation, ed. of 1892, pp. 11, 12, and 14.)

Immediately following the treaty the Cherokee Nation amended these sections, first adopting the following preamble:

"Whereas by the treaty executed at Washington, on the 19th day of July, A. D. 1866, between the United States and the Cherokee Nation, through its delegation, ratified by the Senate and officially promulgated by the President of the United States, August 11, 1866, certain things were agreed to between the parties to said treaty, involving changes in the constitution of the Cherokee Nation, which changes can not be accomplished by the usual mode; and,

"Whereas it is the desire of the people and government of the Cherokee Nation to carry out in good faith all of its obligations, to the end that law and order be preserved, and the institutions of their government maintained."

The sections, as amended, read as follows:

"SEC. 2. The lands of the Cherokee Nation shall remain common property until the national council shall request the survey and allotment of the same, in accordance with the provisions of article 20th of the treaty of 19th July, 1866, between the United States and the Cherokee Nation."

"SEC. 5. No person shall be eligible to a seat in the national council but a male citizen of the Cherokee Nation, who shall have attained to the age of twenty-five years, and who shall have been a *bona fide* resident of the district in which he may be elected, at least six months immediately preceding such election. All native-born Cherokees, all Indians, and whites legally members of the nation by adoption, and all freedmen who have been liberated by voluntary act of their former owners or by law, as well as free colored persons who were in the country at the commencement of the rebellion, and are now residents therein, or who may return within six months from the 19th day of July, 1866, and their descendants, who reside within the limits of the Cherokee Nation, shall be taken and deemed to be citizens of the Cherokee Nation." (Constitution and Laws Cherokee Nation, ed. 1892, pp. 31, 32, and 33.)

In pursuance of this treaty, and under this amended constitution, the Cherokees and Delawares came together and entered into an agreement of date April 8, 1867, which, after referring to certain treaties, among them this of July 19, 1866, and reciting that a "full and free conference has been had between the representatives of the Cherokees and the Delawares, in view of the treaties herein referred to, looking to a location of the Delawares upon the Cherokee lands, and their consolidation with said Cherokee Nation," stipulates as follows:

"Now, therefore, it is agreed between the parties hereto, subject to the approval of the President of the United States, as follows:

"The Cherokees, parties of the first part, for and in consideration of certain payments, and the fulfillment of certain conditions hereinafter mentioned, agree to sell to the Delawares, for their occupancy, a quantity of land east of the line of the 96° west longitude, in the aggregate equal to one hundred and sixty acres for each individual of the Delaware tribe, who has been enrolled upon a certain register made February 18, 1867, by the Delaware agent, and on file in the Office of Indian Affairs, being the list of Delawares who elect to remove to the 'Indian country,' to which list may added, only with the consent of the Delaware council, the names of such other Delawares as may, within one month after the signing of this agreement, desire to be added thereto, and the selections of the lands to be purchased by the Delawares may be made by said Delawares in any part of the Cherokee Reservation east of said line of 96°, not already selected and in possession of other parties, and in case the Cherokee lands shall hereafter be allotted among the members of said nation, it is agreed that the aggregate amount of land herein provided for the Delawares, to include their improvements according to the legal subdivisions when surveys are made (that is to say, one hundred and sixty acres for each individual), shall be guaranteed to each Delaware incorporated by these articles into the Cherokee Nation, nor shall the continued ownership and occupancy of said land by any Delaware so registered be interfered with in any manner whatever without his consent, but shall be subject to the same conditions and restrictions as are by the laws of the Cherokee Nation imposed upon native citizens thereof: *Provided*, That nothing herein shall confer the right to alienate, convey, or dispose of any such lands, except in accordance with the constitution and laws of said Cherokee Nation.

"And the said Delawares, parties of the second part, agree that there shall be paid to the said Cherokees from the Delaware funds now held or hereafter received by

the United States, a sum of money equal to one dollar per acre for the whole amount of one hundred and sixty acres of land for every individual Delaware who has already been registered upon the aforesaid list, made February 18, 1867, with the additions theretofore provided for.

"And the Secretary of the Interior is authorized and requested to sell any United States stocks belonging to the Delawares to procure funds necessary to pay for said lands; but in case he shall not feel authorized, under existing treaties, to sell such bonds belonging to the Delawares, it is agreed that he may transfer such United States bonds to the Cherokee Nation, at their market value, at the date of such transfer.

"And the said Delawares further agree, that there shall be paid from their funds, now or hereafter to come into possession of the United States, a sum of money which shall sustain the same proportion to the existing Cherokee national fund that the number of Delawares registered as above mentioned and removing to the Indian country sustains to the whole number of Cherokees residing in the Cherokee Nation. And for the purpose of ascertaining such relative numbers, the registers of the Delawares herein referred to, with such additions as may be made within one month from the signing of this agreement, shall be the basis of calculation as to the Delawares, and an accurate census of the Cherokees residing in the Cherokee Nation shall be taken under the laws of that nation within four months, and properly certified copies thereof filed in the Office of Indian Affairs, which shall be the basis of calculation as to the Cherokees.

"And that there may be no doubt hereafter as to the amount to be contributed to the Cherokee national fund by the Delawares, it is hereby agreed by the parties hereto that the whole amount of the invested funds of the Cherokees, after deducting all just claims thereon, is \$678,000.

"And the Delawares further agree, that in calculating the total amount of said national fund there shall be added to the said sum of \$678,000 the sum of \$1,000,000, being the estimated value of the Cherokee neutral lands in Kansas, thus making the whole Cherokee national fund \$1,678,000; and this last-mentioned sum shall be taken as the basis for calculating the amount which the Delawares are to pay into the common fund.

"*Provided*, That as the \$678,000 of funds now on hand belonging to the Cherokees is chiefly composed of stocks of different values, the Secretary of the Interior may transfer from the Delawares to the Cherokees a proper proportion of the stocks now owned by the Delawares of like grade and value, which transfer shall be in part of the *pro rata* contribution herein provided for by the Delawares to the funds of the Cherokee Nation; but the balance of the *pro rata* contribution by the Delawares to said fund shall be in cash or United States bonds, at their market value.

"All cash, and all proceeds of stocks, whenever the same may fall due or be sold, received by the Cherokees from the Delawares under the agreement, shall be invested and applied in accordance with the 23d article of the treaty with the Cherokees of August 11, 1866.

"On the fulfillment by the Delawares of the foregoing stipulations, all the members of the tribe registered as above provided, shall become members of the Cherokee Nation, with the same rights and immunities, and the same participation (and no other) in the national funds as native Cherokees, save as hereinbefore provided.

"And the children hereafter born of such Delawares so incorporated into the Cherokee Nation, shall in all respects be regarded as native Cherokees."

In pursuance of this agreement, which was approved by the President of the United States as stipulated in article 15 of the treaty, 985 Delawares removed to the territory of the Cherokees, paid \$157,600 for the lands set apart for them, contributed \$121,824.28, their share of the national fund as provided, and became incorporated into the Cherokee Nation.

At the time of this treaty the Cherokee Nation was possessed of the following tracts or bodies of lands:

	Acres.
"Strip" lands in Kansas (about)	400,000
"Neutral" lands in Kansas (about)	1,000,000
Lands west of 96°, Indian Territory (about)	8,000,000
Lands east of 96°, Indian Territory, Home Reservation (about)	5,000,000

By article 17 of the treaty the strip lands and the neutral lands were ceded to the United States, to be sold for the benefit of the Cherokee Nation. The sum expected to be realized from the sale of the neutral lands was, by the agreement between the Cherokees and the Delawares, considered as already received and a part of the Cherokee national fund. The proceeds of the sale of the strip lands were subsequently appropriated to the uses of the Cherokee Nation as a nation, and not for the benefit of the native Cherokees alone, leaving as still the property of the Cherokee Nation the two bodies of land in the Indian Territory (sometimes known as the "Home Reservation" and the "Cherokee Outlet"). Certain sums of money were

received by the Cherokee Nation for the rental of the Cherokee Outlet. These sums the Cherokee council determined belonged wholly to the native Cherokees, to the exclusion of the Delawares. This brought about a controversy between the native Cherokees and the Delawares, involving not merely the right to share in these proceeds, but also the interest of the Delawares in the reservation and the outlet. On October 1, 1890 (26 Stat., 636), an act of Congress was passed providing for a reference to the Court of Claims of that controversy. Thereupon, on October 29, 1890, this suit was brought, the United States being made a party defendant, not as having any adverse interest, but as trustee, holding the funds of the Indians. The opinion of that court was filed April 24, 1893 (28 C. Cls., 281), the conclusion being that the Delawares were incorporated into the Cherokee Nation, and, as members and citizens thereof, were entitled to equal rights in these lands and their proceeds. On May 22, 1893, a decree was entered in accordance with these views, from which decree the Cherokee Nation and the United States have appealed to this court.

Mr. Justice Brewer delivered the opinion of the court:

This case hinges on the status of the individual Delawares as members and citizens of the Cherokee Nation, and the rights secured to them by the agreement of April 8, 1867. In order to a correct understanding of this agreement it is necessary to refer to the provisions of article 15 of the treaty of 1866. That article contemplated the settlement of other Indians within the limits of the Cherokee country east of the ninety-sixth degree of longitude, and provided for such settlement in two ways: One in which the Indians settled should abandon their tribal organization, in which case, as expressed, they were to "be incorporated into and ever after remain a part of the Cherokee Nation on equal terms in every respect with native citizens." The other was where the removal of the tribe to the Cherokee country should involve no abandonment of the tribal organization, in which case a distinct territory was to be set off, by metes and bounds, to the tribe removed. The one contemplated an absorption of individual Indians into the Cherokee Nation; the other a mere location of a tribe within the limits of the Cherokee Reservation. If the removed Indians were to be absorbed into the Cherokee Nation, they were to be absorbed on equal terms in every respect with native citizens.

In this connection reference may be had to article 16 of the treaty, which authorized the Government to settle friendly Indians in any part of the Cherokee country west of the ninety-sixth degree of longitude. This article differs from article 15 in that it contemplated a location of any friendly tribe as a tribe, authorized the Government to place it anywhere within the reservation west of the ninety-sixth degree of longitude, on a tract in compact form, and provided for a conveyance of such tract in fee simple to the located tribe. It thus provided for taking a body of land out of this part of the Cherokee Reservation, and removing it wholly from the jurisdiction of the Cherokee Nation, making a new reservation for the occupancy of the tribe to whom it was conveyed; while in the case of Indians removed under the provisions of article 15, even though the tribal organization was preserved, the general jurisdiction of the Cherokee Nation over the territory occupied by the removed tribe was not disturbed.

Turning now to the agreement itself, its purpose, as expressed in its preliminary language, was "a location of the Delawares upon the Cherokee lands and their consolidation with the said Cherokee Nation." There is no provision for the setting apart of a distinct body of land in any portion of the reservation for the Delaware tribe, but the agreement is to sell to them for their occupancy a quantity of land equal in the aggregate to 160 acres for each individual Delaware who may "elect to remove to the Indian country," and "the selection of the amounts to be purchased by the Delawares may be made by said Delawares in any part of the said Cherokee Nation east of said line of 96 degrees, not already selected and in possession of other parties." This contemplates personal selection of separate tracts by individual Delawares. Further, there is a guarantee "to each Delaware incorporated by these articles into the Cherokee Nation" of the lands thus by him purchased, and that his ownership and occupancy shall not be interfered with in any manner without his consent—not the consent of the Delaware tribe—and also that it shall be subject to the "same conditions and restrictions as are by the laws of the Cherokee Nation imposed upon native citizens thereof." But we are not limited to the plain inferences to be drawn from these expressions. The positive provision at the close of the agreement is as follows:

"On the fulfillment by the Delawares of the foregoing stipulations, all the members of the tribe, registered as above provided, shall become members of the Cherokee Nation, with the same rights and immunities, and the same participations (and no other) in the national funds as native Cherokees, save as hereinbefore provided.

"And the children hereafter born of such Delawares so incorporated into the Cherokee Nation shall in all respects be regarded as native Cherokees."

If nothing were presented other than the language of the agreement, the conclusion would seem irresistible that the registered Delawares, that is, those of the

tribe who chose to remove from Kansas to the Indian Territory, were not only to become members of the Cherokee Nation, but also to stand equal with the native Cherokees in all the rights springing out of citizenship in the Cherokee Nation. Whatever rights the Cherokees had, the registered Delawares were to have, and it was an equality not limited to the living Delawares; but to guard against any misconception there was the express declaration that the children of the registered Delawares should in all respects be regarded as native-born Cherokees. This last clause was not inserted with the view of giving additional rights to such children, but to prevent any question as to their inheritance of all the rights which their fathers received under the agreement.

That the 13,000,000 acres, whether appropriately styled its "common property" or its "public domain," belonged to the Cherokee Nation as a nation, is beyond dispute. By the treaty of May 6, 1828 (7 Stat., 311), it was provided in article 2 that "the United States agree to possess the Cherokees, and to guarantee it to them forever, and that guarantee is hereby solemnly pledged, of seven million acres of land, to be bounded as follows: * * * In addition to the seven million of acres thus provided for, and bounded, the United States further guarantee to the Cherokee Nation a perpetual outlet, west, and a free and unmolested use of all the country lying west of the western boundary of the above-described limits, and as far west as the sovereignty of the United States and their right of soil extend."

By subsequent treaties, of February 14, 1833 (7 Stat., 414), and December 29, 1835 (7 Stat., 478), certain changes were made in the boundaries of the reservation and the outlet, and by article 3 of the latter treaty it was provided that "the United States also agree that the lands above ceded by the treaty of February 14, 1833, including the outlet, and those ceded by this treaty shall all be included in one patent executed to the Cherokee Nation of Indians by the President of the United States according to the provisions of the act of May 28, 1830."

Under these treaties, and in December, 1838, a patent was issued to the Cherokees for these lands. By that patent, whatever of title was conveyed was conveyed to the Cherokees as a nation, and no title was vested in severalty in the Cherokees, or any of them. The constitution of the Cherokee Nation, both as originally adopted in 1839 and as amended in 1866, declares in article 1, section 2, that "the lands of the Cherokee Nation shall remain common property," and while the amendment contemplates a time at which these lands shall cease to be common property, it is only when, by article 20 of the treaty of 1866, the national council shall request that they be surveyed and allotted in severalty to the Cherokees. Not only does the Cherokee constitution thus provide that the lands shall be common property, but also the legislation of the Cherokee Nation from 1839 on to the present time abounds with acts speaking of these lands as "public domain" or "common property" of the Cherokee Nation. Quite a number of these acts are collected in the opinion of the Court of Claims in this case.

Now, if these lands be the public domain, the common property of the Cherokee Nation, all who are recognized as members and citizens of that nation are alike interested and alike entitled to share in the profits and proceeds thereof. Given, therefore, the two propositions that the lands are the common property of the Cherokee Nation, and that the registered Delawares have become incorporated into the Cherokee Nation and are members and citizens thereof, it follows necessarily that they are equally with the native Cherokees the owners of and entitled to share in the profits and proceeds of these lands.

As against this conclusion the argument of the counsel for the Cherokees runs along these lines: First, that the terms "rights and immunities" refer only to political rights and immunities, and do not include property rights; second, that as it is specifically provided that the registered Delawares shall have equal participation in the national funds, while no mention is made of these lands which constituted the bulk of the Cherokee property, it is to be taken that no interest therein was intended to be transferred; third, that this is strengthened by the fact that there was a stipulation for the purchase of certain lands at \$1 per acre; and, fourth, that the contribution of the Delawares to the national property was so small, and the value of these lands so great, that it could not have been in the contemplation of the parties that the Delawares were to receive any interest in them.

Commenting generally upon this line of argument, it is rather an endeavor to induce the court to reconstruct the contract and frame one more in accord with what, from the present standpoint, would seem to have been equitable, than to interpret the contract which the parties made, in accordance with the plain import of the language which they used.

It is true that "rights and immunities" are often used as descriptive of only political rights and immunities, and do not necessarily include property rights, so that if these were the only words by which the intent of the contracting parties was to be determined, there would be room for the argument that only political rights and immunities were intended to be granted. But it must be borne in mind that the

rights and interest which the native Cherokees had in the reservation and outlet sprang solely from citizenship in the Cherokee Nation, and that the grant of equal rights as members of the Cherokee Nation naturally carried with it the grant of all rights springing from citizenship. So far as the provision in the agreement for the purchase of homes is concerned it will be perceived that no absolute title to these homes was granted. We may take notice of the fact that the Cherokees in their long occupation of this reservation had generally secured homes for themselves; that the laws of the Cherokee Nation provided for the appropriation by the several Cherokees of lands for personal occupation, and that this purchase by the Delawares was with the view of securing to the individual Delawares the like homes; that the lands thus purchased and paid for still remained a part of the Cherokee Reservation. And as a further consideration for the payment of this sum for the purchase of homes the Delawares were guaranteed not merely the continued occupancy thereof, but also that in case of a subsequent allotment in severalty of the entire body of lands among the members of the Cherokee Nation, they should receive an aggregate amount equal to that which they had purchased, and such a distribution as would secure to them the homes upon which they had settled, together with their improvements.

So that if, when the allotment was made, there was for any reason not land enough to secure to each member of the Cherokee Nation 160 acres, the Delawares were to have at least that amount, and the deficiency would have to be borne by the native Cherokees pro rata. In other words, there was no purchase of a distinct body of lands, as in the case of the settlement of other tribes as tribes within the limits of the Cherokee Reservation. The individual Delawares took their homes in and remaining in the Cherokee Reservation, and as lands to be considered in any subsequent allotment in severalty among the members of the Cherokee Nation. All of this was in the line of the expressed thought of a consolidation of these Delawares with and absorption of them into the Cherokee Nation as individual members thereof. If it be said that all of the Delaware trust funds were not turned into the national fund it will be remembered that there was no impropriety in the reservation of a part thereof in order to enable the Delawares to make such improvements as they might desire on the tracts that they selected for homes, and also that there was no certainty that all the members of the Delaware tribe would elect to remove to the Cherokee country, and that those who remained in Kansas were entitled to their share in the Delaware national funds.

With regard to the claim that the Delawares paid an inconsiderable sum, if it was the intent that they should share equally with the native Cherokees in this vast body of lands included in the reservation and outlet, it will be borne in mind that the alleged gross inadequacy depends largely upon the value of these 13,000,000 acres. Counsel for the Cherokees place this value at \$1.25 per acre, the minimum price for Government lands, and upon that valuation base their claim of inadequacy of consideration. They point to the fact that the neutral lands in Kansas were estimated in the agreement to be worth \$1.25 an acre, and infer therefrom that the lands in the Indian Territory were of like value. But that is a mere inference, and over against it may be placed such facts as these: On June 14, 1866, only about a year before this agreement, the Creeks, by treaty, sold to the Government a tract in the Indian Territory estimated to contain 3,250,560 acres, at the price of 30 cents per acre. (14 Stat., 786.) The Seminoles, on March 21, 1866, likewise ceded a tract estimated at 2,169,080 acres, at the rate of 15 cents an acre (14 Stat., 756), and on April 28, 1866, the Choctaws and Chickasaws ceded a large tract, also in the Territory, for the gross sum of \$300,000, a sum which, as counsel for the appellees stated, was only at the rate of about 5 cents an acre. (14 Stat., 769.) The significance of these figures is not destroyed by the fact that in 1889 Congress appropriated a large sum for both the Creeks and Seminoles, to wit: To the Creeks the sum of \$2,280,857.10, and to the Seminoles the sum of \$1,912,942.02 (25 Stat., 758, 1004), apparently in further payment of these lands. For while this may tend to show that Congress then felt that the Creeks and Seminoles had not received a full price for their lands, it is not inconsistent with the claim that in 1866 the contracting parties considered the lands to be worth only the stipulated price. Further than that, in pursuance of the provisions of the fifth section of the act of May 29, 1872 (17 Stat., 190), an appraisement was made of the Cherokee lands west of the ninety-sixth meridian, which appraisement, approved by the President, fixed the value of a portion of such lands (230,014.04 acres) at 70 cents, and the balance (6,344,562.01 acres) at 47.49 cents per acre.

It may well be that land within the limits of a rapidly growing State were worth at the time of this agreement \$1.25 per acre, while lands within the Indian Territory, situate as these were, were of much less value. Neither should too much weight be given to the fact that the Delawares were to pay for their homes at the rate of \$1 an acre, for by that purchase they acquired no title in fee simple, and it is not unreasonable to believe that the price thus fixed was not merely as compensation

for the value of the lands (to be taken in the eastern portion of the reservation, where the body of the Cherokees had their homes, and therefore probably the most valuable portion of the entire reservation), but also as sufficient compensation for an interest in the entire body of lands, that interest being like that of the native Cherokees limited to a mere occupancy of the tracts set apart for homes, with the right to free use in common of the unoccupied portion of the reserve, and a right to share in any future allotment. At any rate, with the uncertainty that exists as to its value, it can not be said to be clear that there was such gross inadequacy of consideration as is urged by the counsel for the Cherokees; certainly nothing which would justify a court of equity in setting aside the contract on the ground of inadequacy.

But further, the thought of sale—at least of an early sale—was evidently not in contemplation of the parties, or in line with the then policy of the Government. This Indian Territory was looked upon as the permanent home of the Indians. The Government was making the effort to bring within its limits all the Indians from all parts of the land, and it was not in the contemplation of the Government, or of these contracting parties, that at any early day these lands would be thrown open to settlement and sale, but rather the idea was that they were to be continued as their permanent place of abode. Considered as such, so long as each individual Indian, whether Delaware or Cherokee, had his particular tract for occupancy as a home, it was not unnatural or unequal that the vast body of the lands not thus specifically and personally appropriated should be treated as the common property of the nation, in respect to which all who were members thereof, whether by birth or adoption, should be entitled to equal rights and privileges. That there might come a time when an allotment in severalty would be advisable, was something that was contemplated and provided for. And while if allotment had been made at the time among the 13,573 Cherokees there would have been enough land to have given each nearly 1,000 acres, yet, with the expected coming in of other tribes, either to take certain selected portions of the reservation as tribes by an absolute title, or to enlarge the numbers of the Cherokee Nation by adoption (as in the case of these Delawares), it was foreseen that the time might come when the allotment might not secure even 160 acres to each individual, and so was added the express guarantee that the purchasing Delawares should obtain at least that amount in the allotment. True, the course of events has not been what was then contemplated, but in order to determine the meaning of this contract we must place ourselves in the circumstances of the parties at the time, with their surroundings and expectations. In that light we see nothing in the matters suggested by counsel sufficient to overthrow the plain import of the language used in the agreement, and must conclude that by such agreement the Delawares became incorporated into the Cherokee Nation, became members thereof, and, as such, entitled equally with the native Cherokees to all their rights in the reservation and outlet.

Further, it may be remarked that the action of the Cherokee Nation up to the year 1882 was in the line of the construction we have placed upon this contract, for up to that date there was no distinction made between the native Cherokees and these Delawares in the distribution of funds from whatever source obtained. Out of the moneys received by the Cherokee Nation on account of lands west of the ninety-sixth degree set apart for the Osage Indians, under the act of June 5, 1872, \$200,000 was distributed per capita, in which distribution the Delawares shared equally with the native Cherokees. And again, when, on account of sales west of the ninety-sixth degree, Congress on June 16, 1880, appropriated \$300,000, such sum was also paid out per capita, the Delawares sharing equally with the native Cherokees. Such action is of significance in determining the understanding of the parties to the contract. It is a practical interpretation by the parties themselves of the contract they made. It is also worthy of note that when in 1883 a bill passed the National Council for the payment to the native Cherokees alone of a certain sum of money received as rental from the Cherokee Strip Live Stock Association, which so far as appears was the first manifestation of a claim of a difference between the native Cherokees and the registered Delawares as to the extent of their interests in the lands or the proceeds thereof, it was vetoed by D. W. Bushyhead, the then principal chief of the Cherokee Nation, on the ground that such action was in violation of the agreement of 1867. It is true the bill was passed over his veto. While the veto message is too long to quote in full, these extracts sufficiently disclose the reasons upon which it is based:

"3d. The 'patent' was made to the 'Cherokee Nation' in 1838, and the Cherokee Nation was then composed of citizens by right of blood, and so continued to be until the exigencies of the late war arose, when, in 1866, it became necessary to make a new treaty with the United States Government. By this treaty, made by and with this nation, other classes of persons were provided to be vested with all the rights of 'native Cherokees' upon specified conditions. These conditions have been fulfilled as regards the acknowledged colored citizens of this nation and the so-called Delaware and Shawnee citizens. I refer you to article 9th of said treaty in regard to colored citizens, and article 15th, first clause, as regards Indians provided to be settled

east of 96°. The language is, they shall have all the rights of native Cherokees 'and' they shall be incorporated into and ever after remain a part of the Cherokee Nation on equal terms in every respect with native Cherokees.

* * * * *

"6th. If the lands of the nation were and are the common property of citizens, then no citizen can be deprived of his or her right and interest in the property without doing an injustice, and without a violation of the constitution which we are equally bound to observe and defend. While the lands remain common property, all citizens have an equal right to the use of it. When any of the land is sold under provisions of treaty, all citizens have an equal right to the proceeds of their joint property, whether divided *per capita* or invested.

"Senators, such is the treaty and such is the constitution. I have referred you to them, and stated their evident meaning in the premises to the best of my ability, as is my duty. To the classes of citizens this bill would exclude, attach 'all the rights and privileges of citizenship according to the constitution.' To three of these classes attach also all the rights of 'native Cherokees,' according to treaty."

Further comment on this case is unnecessary. We see no error in the conclusions of the Court of Claims, and its decree is affirmed.

SUPREME COURT OF THE UNITED STATES.

[No. 622.—October term, 1894.]

The United States, appellant, v. Johnson Blackfeather. Appeal from the Court of Claims.

[November 19, 1894.]

This was a claim by the Shawnee tribe of Indians under a special act of Congress passed October 1, 1890 (26 Stat., 636), conferring jurisdiction upon the Court of Claims, subject to an appeal to this court, to hear and determine the just rights in law or in equity of the Shawnee and Delaware Indians under certain treaties with the Government.

The fourth section of the act authorizes the Shawnees to bring suit to recover "any amount of money that in law or equity is due from the United States to said tribes in reimbursement of their tribal fund for money wrongfully diverted therefrom."

The original petition in the case was filed December 10, 1890. An amended petition was filed by leave of the court February 3, 1891, to which the defendants filed a traverse.

On July 6, 1892, an amended and supplemental act of Congress was passed (27 Stat., 86) authorizing the Shawnees to present to the Court of Claims "all their claims against the United States and the Cherokee Nation, or against either or both of them, of every description whatsoever, arising out of treaty relations with the United States, rights growing out of such treaties, and from contracts, expressed or implied, under such treaties, made and entered into by and between the said Shawnees and Cherokees, and between them or either of them, and the United States."

Subsequently, on July 21, 1892, the appellee filed a second amended petition in the Court of Claims, introducing claims not embraced in the former petition.

The United States interposed a general denial of the allegations of the petition and also made a counterclaim of \$12,182.03, alleged to have been overpaid, under a treaty of 1825.

The case having been heard by the Court of Claims, the court, upon the evidence, made the following findings of fact (28 C. Cls., p. 448):

I. The following is the Spanish grant to the Shawnee Indians, to which reference is made in the preamble of the treaty between the United States and the Shawnees in Missouri, proclaimed December 30, 1825:

"Delawares and Shawnees, claiming a tract of country between the river St. Coure and Cape Gira'deau, and bounded on the east by the Mississippi and west by the White Water, district of Cape Gira'deau, produced to the board as follows, to wit:

"The Baron de Carondelet, knight of the faith of St. John, colonel of the royal armies, governor intendant-general, subprefect of the provinces of Louisiana, west Florida, and inspector of their troops, &c. Be it known by these presents, that in consideration of the good and faithful services that the said Louis Lorimer has rendered to the State since he has been a subject of His Catholic Majesty, we allow him to settle with the Delaware and Shawnee Indians who are under his control in such places as he may select in the province of Louisiana, on the right bank of the Mississippi, from the Missouri to the Arkansas River, which may have no governor, and

both to hunt and plant thereon for the support of their families, and no commandant, officer, or King's subject shall have the power to oppose him in occupying the lands by him and the said Indians sown, planted, or settled, so long as they shall think proper to abide there; provided, in case they abandon them to move elsewhere they will be considered as vacant; and as for the house that the said Sir Louis Lorimer built at Cape Gira'deau, it shall remain in his possession, not to be taken from him for any reason except the sole ones of illicit commerce or corresponding with the enemies of the State.

"Wherefore we have given these presents, signed by our hand and countersigned by the secretary of this Government, and to which we have caused the seal of our arms to be affixed at New Orleans, on January 4, 1793.

"LE BARON DE CARONDELET.

"ANDRES LOPEZ ARMESTO.

"By order of his lordship."

II. The Missouri band of Shawnees have received payments in accordance with the provisions of the treaty of 1825, but the following balance remains unpaid, \$1,152.78.

III. The lands which the treaty of 1831, between the United States and the Ohio band of Shawnees, ceded to the defendant herein, were received and sold. Of these lands, between December 24, 1832, and December 31, 1832, 9,841.27 acres were sold at public sale to the highest bidder at the rate of \$2.08 $\frac{1}{2}$ per acre. The total amount received for these lands is shown in Finding VI. The rest of the land so ceded was sold at private sale at the rate of \$1.25 per acre. Some of the land sold at this rate of \$1.25 per acre had improvements upon it, but most of the land so sold was unimproved. The lands were sold with reasonable expedition; the last sale was June 30, 1840. The total amount of the lands ceded was 96,051.48 acres.

The amount of land to be reserved to Francis Duquochet (article 11, treaty of 1831) was 320 acres.

The amount of land to be reserved to Joseph Parks (article 13) was 640 acres. The amount of land the price of which was to be reserved to the Michigan Shawnees (article 13) was 640 acres.

IV. Whether the Shawnees, who, in 1831, resided on the River Huron, Michigan, have expressed a desire to follow the Shawnees of Wapaghkonnetta to their residence west of the Mississippi does not appear, nor does it appear that they have expressed a desire not to do so. Their wishes upon this subject are not disclosed.

V. Out of the proceeds of the land sales in Ohio the United States has retained (at 70 cents per acre) the amount shown in Finding VI; also \$6,994.40, the cost of the gristmill and sawmill; also \$1,011, the cost of surveying; also \$13,000 for improvements.

VI. The following is the account between the United States and the Shawnee tribe under treaty of 1831:

	Acres.
Total amount of land ceded.....	96, 051. 48
Less:	
Reserved for Joseph Parks	640. 00
Reserved for Francis Duchouquet	320. 00
Reserved for Hurons (the price to be held as shown in treaty)	640. 00
Difference between plats and abstracts	5. 43
	1, 605. 43
Acres	94, 446. 05
Of these acres there were sold, at \$2.08 $\frac{1}{2}$ per acre, 9,841.27 acres, yielding \$20,543.65.	
There remained (acres) 84,604.78, which, at \$2 per acre, would have yielded \$169,209.56; adding this to the \$20,543.65 gives a total of \$189,753.21.	
There has been paid to the Shawnees:	
Per fifth article treaty of 1831	\$13, 000. 00
Per fourth article treaty of 1831	6, 994. 00
Per seventh article treaty of 1831 (surveying)	1, 011. 00
Amount retained from sales, at 70 cents per acre	66, 252. 23
	87, 257. 63
Total	87, 257. 63
From the amount due as shown above	189, 753. 21
Subtract	87, 257. 63
	102, 495. 58
Balance (in 1840)	102, 495. 58
Paid to the Shawnees (September 28, 1852) under the seventh article of the treaty of 1831	37, 180. 58

Interest on \$102,495.58 from June 30, 1840, to June 12, 1893, at 5 per cent .	\$271, 357. 04
Interest on \$37,180.58 from September 28, 1852, to June 12, 1893, at 5 per cent .	75, 672. 80
Difference	195, 684. 24
Subtract amount paid	37, 180. 58
Balance	158, 503. 66
Add (see <i>supra</i>)	102, 495. 58
Total	260, 999. 24
Add amount unpaid under treaty of 1825	1, 152. 78
Total	262, 152. 02

VII. Difficulties arose as to the 100,000 acres which the second article of the treaty of 1831 provided should be given the Indians, and the United States failed to perform their stipulation in this regard; because of this failure the United States paid the Ohio Shawnees \$66,246.23, and received receipts stating that the moneys thus paid were "in full payment of all claims under that part of the treaty of 1831 which has relation to the grant of 100,000 acres of land in fee simple to the Ohio Shawnees." It does not appear that the amount so paid the Ohio Shawnees was insufficient compensation.

VIII. Owing to laches or dishonesty, certain moneys due to orphan children under the treaty of 1854 with the Shawnees, to be distributed under the last clause of article 8 thereof, was lost to them. The President deemed best to pay their money over in severalty. The Shawnee council created certain so-called guardians of the orphan children, and to them the defendants paid a portion of the orphans' money, which by laches or dishonesty never reached the orphans. Another portion of the orphans' money was committed to a United States Indian superintendent for distribution; he embezzled it, and this money was lost to the orphan children.

The total amount lost to the orphan children in the manner above set forth was \$10,506.39. On this amount the United States recovered from the Indian superintendent's sureties \$1,068.77, and in 1884 appropriated the balance, \$9,437.62, but no payment has been made, as the Secretary of the Interior and Commissioner of Indian Affairs deemed that the whole amount of the money should not go to the Shawnees as a tribe, but a part at least "should be paid directly to the parties to whom it belongs."

IX. There was paid the Shawnees for blacksmiths from 1825 to 1854 the sum of \$17,408.73.

Upon these findings, the Court of Claims entered a decree to the effect that there was due to the Shawnees from the United States on June 12, 1893, the date of the decree, principal and interest, the sum of \$262,152.02, and the further sum of \$10,506.39, due to certain infant Shawnees, which was ordered to be paid to said orphans or their personal representatives under the direction of the Secretary of the Interior. It was further ordered that there be paid to counsel for the Shawnees as compensation the sum of \$26,215, which does not exceed 10 per cent of the amount recovered by said Indians, and which is to be paid out of and deducted from the said above-mentioned sum of \$262,152.02. The opinion of the court is reported in 28 C. Cls, 447.

From this judgment the United States appealed to this court.

Mr. Justice Brown delivered the opinion of the court:

As the claimant took no appeal from the judgment of the court below, of course we are not called upon to consider the numerous errors assigned in his brief to its action in refusing to make certain allowances claimed in his petition. (*The Stephen Morgan*, 94 U. S., 599.) We are concerned only with the appeal of the Government from the allowances actually made, and shall limit our decision to the errors assigned by the Attorney-General in his brief.

1. Prior to December 30, 1825, a portion of the Shawnee Indians were individually and collectively in possession of a tract of land about 25 miles square near Cape Girardeau in the State of Missouri, under a permit from the Spanish Government, granted to them on January 4, 1793, by the Baron de Carondelet. A translated copy of this grant constitutes the first finding of the court below. This tract of land was acquired by the United States under the treaty of cession with the French Republic of April 30, 1803 (8 Stat., 200), commonly known as the "Louisiana purchase." The sixth article of this treaty obligated the United States to carry out such treaties and articles as might have been agreed upon between Spain and the Indian tribes, until by mutual consent of the United States and said tribes other suitable articles should be agreed upon.

On December 30, 1825, a treaty was made by the United States with these Indians (7 Stat., 284), under which the Indians ceded to the United States the lands in question, in consideration of which the United States agreed to give to the Shawnees residing within the State of Missouri, "for themselves and for those of the same

nation now residing in Ohio, who may hereafter emigrate to the west of the Mississippi, a tract of land equal to 50 miles square, situated west of the Missouri, and within the purchase lately made from the Osages." The United States further agreed to make certain payments in money to the Shawnees as an equivalent for the loss and inconvenience which the tribe would sustain by removal, to enable them to obtain supplies, and to satisfy certain claims made against citizens of the United States for spoliations. It appears that the Shawnees received payments under this account, but the second finding of the court is that a balance remains unpaid of \$1,152.78. As this is a finding of fact upon the evidence, it is not controverted by the Government, and no error is assigned to its allowance. The claim of the appellees that interest should have been allowed upon this residue can not be considered, as no appeal was taken from such refusal.

The only question connected with this branch of the case arises from a counter-claim by the Government, under the fourth article of the treaty, by which the Government undertook to support and keep a blacksmith for the use of the Indians on the land thereby assigned to them, for the term of five years, "or as long as the President may deem it advisable; and it is further stipulated, that the United States shall furnish for the use of the Shawnees, the tools necessary for the blacksmith's shop and 300 pounds of iron annually, to be furnished at the expense of the United States." The court finds that there was paid the Shawnees for blacksmiths from 1825 to 1854 the sum of \$17,408.73. As there is no finding how much of this sum was expended during the five years, or the extended period deemed "advisable" by the President, during which the Government was bound to keep up the blacksmith shop, the finding is too indefinite to be made the subject of a set-off. Indeed, for all that appears, the President may have deemed it advisable to continue the shop until 1854. His discretion was absolute as to the time the shop should be continued. We can only say that, as the shop was established and equipped *under* the treaty, it was probably continued under the discretion vested in the President *by* the treaty. It is clear that the amount expended is not available as a set off.

2. The second and principal assignment of error arises from an allowance of the sum of \$260,999.24, based upon a treaty made August 8, 1831 (7 Stat., 355), with a branch of the Shawnees residing in Ohio, under which they ceded to the United States their lands in Ohio, the Government agreeing to give in exchange certain lands upon the western side of the Mississippi.

The seventh article of the treaty provided as follows:

"The United States will expose to public sale to the highest bidder, in the manner of selling the public lands, the tracts of land herein ceded by the said Shawnees. And after deducting from the proceeds of such sale the sum of seventy cents per acre, exclusive of the cost of surveying, the cost of the gristmill, sawmill, and blacksmith shop and the aforesaid sum of thirteen thousand dollars, to be advanced in lieu of improvements; it is agreed that any balance which may remain of the avails of the lands, after sale as aforesaid, shall constitute a fund for the future necessities of said tribe, parties to this compact, on which the United States agree to pay to the chiefs, for the use and general benefit of their people, annually, five per centum on the amount of said balance, as an annuity. Said fund to be continued during the pleasure of Congress, unless the chiefs of the said tribe, or band, by and with the consent of their people, in general council assembled, should desire that the fund thus to be created should be dissolved and paid over to them; in which case the President shall cause the same to be so paid, if in his discretion he shall believe the happiness and prosperity of said tribe would be promoted thereby."

The court found (finding 6) the total amount ceded under this treaty to have been 96,051.48 acres, less certain reservations amounting to 1,605.43 acres; that of this amount there was sold at public sale to the highest bidder between December 24 and December 31, 1832, 9,841.27 acres at the rate of \$2.08½ per acre, or a total of \$20,543.65.

The remainder of the land so ceded was sold at private sale at the rate of \$1.25 per acre. Some of the land sold at this rate of \$1.25 per acre had improvements upon it; but most of the land so sold was unimproved. The lands were sold with reasonable expedition; the last sale being June 30, 1840.

In respect to this the Government is alleged to have violated its trust in selling the lands at private sale, the covenant of the treaty being to expose the land to public sale to the highest bidder, in the manner of selling public lands. In this connection the court found that by the act of May 18, 1796 (1 Stat., 464), entitled "An act providing for the sale of the lands of the United States beyond the territory northwest of the river Ohio and above the mouth of the Kentucky River," it was provided that the land should be surveyed and laid out in sections of 640 acres, and by section 4 that they "shall be offered for sale at public vendue under the direction of the governor or secretary of the western Territory and the surveyor-general, * * * provided always, that no part of the lands directed by this act to be offered for sale shall be sold for less than two dollars per acre." So by an act of May 10, 1800, amendatory of this (2 Stat., 73), it was further provided, section 5, "that no lands

shall be sold by virtue of this act, at either public or private sale, for less than two dollars per acre."

Construing the treaty of 1831 in connection with these acts, the court was of opinion that "the United States failed in their duty, when they sold any of these lands otherwise than *at public sale, to the highest bidder*, in the manner of selling the public land, and as trustees of these Indians and their guardians, are liable to them for any loss which the Shawnees may have thus sustained;" and that the best evidence of the amount these lands would have produced if sold according to the treaty stipulations was contained in the statutes above cited, and was, therefore, fixed by the court at \$2 per acre.

Assuming that the court was correct in its legal proposition that the Government was bound to expose all these lands to public sale to the highest bidder, we think it was mistaken in its inference that the land would have brought \$2 per acre if so sold. The attention of the court does not seem to have been called to the act of April 24, 1820 (3 Stat., 566), entitled "An act making further provisions for the sale of public lands," the third section of which provided "that from and after the first day of July next, the price at which the public lands shall be offered for sale, shall be one dollar and twenty-five cents an acre, * * * and all the public lands which shall have been offered at public sale before the first day of July next, and which shall then remain unsold, as well as the lands which shall thereafter be offered at public sale, according to law, and remain unsold at the close of said public sales, shall be subject to be sold at private sale, by entry at the land office, at one dollar and twenty-five cents an acre, to be paid at the time of making such entry as aforesaid." Now as this act was in existence at the time of the treaty of 1831, and was the latest act upon the subject, the reasoning of the court would indicate that the value of the land should have been fixed at \$1.25 per acre instead of \$2. By the express terms of the act of July 14, 1832 (4 Stat., 601), the lands covered by this treaty were "attached to, and made to form a part of, the land districts in which the same are respectively situated, and liable to be sold as other public lands in the State of Ohio."

In view of the act of 1820, above cited, permitting lands which remained unsold after having been offered at public sale to be sold at private sale at \$1.25 per acre, and the act of July 14, 1832, attaching these lands to their several land districts and permitting them to be sold as other public lands in the State of Ohio, it may admit of some doubt whether the Government can be held by this court to have been guilty of a violation of its trust in selling these lands at private sale. If it had appeared that the Government had "exposed" these lands to public sale, to the highest bidder, and failing to find a bidder above the statutory price of \$1.25 per acre, had then sold them at private sale at that price, its obligation would have been completely discharged. But as there is no evidence that they were ever exposed to public sale, we incline to the view expressed by the court below that, as between the Government and the Indians, there was a failure on the part of the former to observe the stipulation of the treaty and a violation of its trust. The obligation being expressed to expose them to public sale, it was incumbent upon the Government to show, either that it had done so and failed to find a bidder, or for some other reason it had been released from the provisions of the treaty. The privilege of selling the lands "in the manner of selling the public lands" does not nullify the obligation to expose them at public sale, which still remained; but it required them to be sold subject to the conditions and in the manner prescribed by the act of 1820.

The difficulty, however, is in estimating the damages the Shawnees suffered by its failure of duty in that particular. We can not assume that, because a portion of the tract sold at auction brought \$2.08 $\frac{1}{2}$ per acre, the whole tract might have been sold at that price, at least in the absence of evidence that all was of equal value, since the part so sold may have been the most valuable of the entire tract. We have shown that the estimate of \$2 per acre was based upon a statute fixing the price of public lands, which had been repealed. In the absence of any proof of the actual value of these lands at this time, there would seem to be no method of estimation except by taking the price at which public lands were subject to be sold at private sale, namely, \$1.25 per acre. Not only is there some presumption that the Government would not sell them for less than they were worth, but the very fact that at that time all public lands were subject to entry at \$1.25 per acre, would render it impossible to sell them at a greater price, unless by reason of their peculiar location, abundant timber, or extraordinary fertility, they were exceptionally valuable. We are not informed why the land sold at auction brought the price it did, but if the other lands were of like value, there is every reason to believe that the Government, charged as it was with a trust to dispose of them at a public sale for the best price that could be obtained, would have exposed them to sale in the same manner. The inference is that it was deemed for the best interests of the beneficiary to dispose of them at private sale for the statutory price, and while this may not excuse the Government for a failure to comply with its obligation to sell them at auction, it tends strongly to show that the Indians in reality suffered no damage by such action.

It results from this that from the total of \$189,753.21, given as the yield of this tract, there must be deducted 75 cents per acre upon 84,604.78 acres, or \$63,453.58, leaving \$126,290.63. Subtracting from this the amount paid to the Shawnees, as found in the sixth finding, \$87,257.63, leaves \$39,042 as the balance due in 1840.

3. Are the Indians entitled to interest upon this amount? By Revised Statutes, section 1091: "No interest shall be allowed upon any claim up to the time of the rendition of judgment thereon by the Court of Claims, unless upon a contract expressly stipulating for the payment of interest." The real question here is whether there was a contract expressly stipulating for the payment of interest, or is this a mere claim for unliquidated damages?

By the seventh article of the treaty it was agreed that the proceeds of the lands, after making the several deductions, "should constitute a fund for the future necessities of said tribe, parties to this compact, on which the United States agree to pay to the chiefs, for the use and general benefit of their people annually, 5 per cent on the amount of said balance, as an annuity. Said fund to be continued during the pleasure of Congress, unless the chiefs of the said tribes or band, by and with the consent of their people, in general council assembled, should desire that the fund thus to be created should be dissolved and paid over to them." While this is not literally an agreement to pay interest, it has substantially that effect. It is true it is called an annuity, but the amount of the annuity is measured by the interest paid upon funds held in trust by the United States (Rev. Stat., sec. 3659) upon investments for Indians (sec. 2096), as well as by the interest paid upon an affirmance by this court of judgments of the Court of Claims (sec. 1090).

A case somewhat analogous is that of *United States v. McKee* (91 U. S., 442), which was a claim of the heirs and legal representatives of one Vigo, on account of supplies furnished in 1778 to troops acting under a commission from the State of Virginia. As the act, under which the Court of Claims took jurisdiction of the case, directed it to be governed by the rules and regulations theretofore adopted by the United States in the settlement of like cases, and as the case was similar to those in which interest had been allowed by the act of 1790, under which act the claim would have been made but for the statutes of limitation, the interest was allowed, though it was not claimed that there was literally a contract expressly stipulating for the payment of interest.

While the treaty bound the Government to pay a 5 per cent annuity until the dissolution of the fund, which dissolution took place September 28, 1852, when the sum of \$37,180.58, the amount of the fund resulting from actual sales, was paid over to the chiefs of the tribe, this dissolution terminated the stipulation for the annuity only *pro tanto*. If the Government had originally accounted for the whole amount for which the court below held it to be liable, it would have paid 5 per cent upon this amount until the whole fund was paid over. The fund as to this amount being not yet distributed, the obligation to pay the 5 per cent annuity continues until the money is paid over. Upon the whole we think the court did not err in allowing interest.

4. An allowance of \$10,506.39, based upon the eighth article of the finding, arose from a failure of certain orphan children to receive the annuity stipulated to be paid them by a treaty of May 10, 1854 (10 Stat., 1053). By this treaty the Shawnees ceded their lands to the United States, and as part consideration therefor received 200,000 acres in the State of Kansas, the Government further agreeing to pay the sum of \$829,000 in certain installments. The eighth article of the treaty provided that "such of the Shawnees as are competent to manage their affairs shall receive their portions of the aforesaid annual installments in money. But the portions of such as shall be found incompetent to manage their affair, whether from drunkenness, depravity, or other cause, shall be disposed of by the President, in that manner deemed by him best calculated to promote their interests and the comfort of their families, the Shawnee council being first consulted with respect to such persons whom it is expected they will designate to their agent. The portions of orphan children shall be appropriated by the President in the manner deemed by him best for their interests." Under the discretion vested in him by the last clause of the section, the President deemed it best to pay their money over in severalty. The Shawnee council created certain so-called guardians of the orphan children, and to them the defendants paid a portion of the orphans' money, which by laches or dishonesty never reached the orphans. Another portion of the orphans' money was committed to a United States Indian superintendent for distribution. He embezzled it, and this money was lost to the orphan children. The total amount thus lost was \$10,506.39.

Conceding that the Government is justly liable for such portion of this money as was committed to the Indian superintendent for distribution, and embezzled by him, it does not follow that it is liable for such portion as was paid over to guardians of the orphan children created by the Shawnee council. The President was authorized to appropriate the portions of these children in the manner deemed best for their interests. He adjudged, probably wisely, that it should not be paid directly to the

children. To whom should he pay it if not to their guardians—guardians who were created by a council of the tribe, which is now seeking to repudiate its own act and hold the Government responsible for the misfeasances of its own agent? The finding does not show when the money was paid, but from the fact that the obligation to pay arose in 1854, it may safely be assumed that the payments were made before the act of July 5, 1862, the sixth section of which, embodied in Revised Statutes, section 2108, prohibited money to be paid to any person appointed by any Indian council to receive money due incompetent or orphan Indians. There can certainly be no presumption that it was paid in the face of an act expressly inhibiting such payment.

While there may be a moral obligation on the part of the Government to reimburse the money embezzled by the Indian superintendent, and, in fact, an appropriation appears to have been made for that purpose (23 Stat., 247), it is by no means clear that, under the acts of 1890 and 1892, the Shawnees were authorized to recover and collect from the Government any other moneys than those which they claimed in their tribal relation or capacity. The money in question is not due the tribe as such, but to certain individual orphans, who claim to have been defrauded. But whether this be so or not, there is nothing in the record to indicate how much of this money was embezzled by the guardians created by the Indian council, and how much by the Indian superintendent, so that there is in reality no basis for a decree in their favor. In this particular we think there was error in the decree of the court below. Whether in a suit by the individual orphans they would be held bound by the receipt of the money by the guardians appointed by the council of their tribe, may be a different question.

5. Exception is also taken to the decree of the court directing a payment of 10 per cent of the amount recovered to the attorney and counsel of the Shawness as his compensation, to be deducted from the total amount of the decree in their favor. By the third section of the act of 1890 (26 Stat., 636), by which this suit was first authorized, it was enacted that "the said Shawnees, Delawares, and freedmen may be represented by attorneys and counsel. And the court is hereby authorized to decree the amount of compensation of such attorneys and counsel fees, not to exceed ten per centum of the amount recovered, and order the same to be paid to the attorneys and counsel of the said Shawnees, Delawares, and freedmen." It is true that this provision, literally interpreted, refers only to compensation in suits authorized in the second section of the act, to be brought against the Cherokee Nation and the United States, to recover from the Cherokee Nation moneys unlawfully diverted by it; but we think that within the true intent and spirit of the act the fourth section, which authorizes the suit in question against the United States to recover money wrongfully diverted from their tribal fund, should be read in the same connection. This view is emphasized by the fact that by the final clause of section 4 "the right of appeal, jurisdiction of the court, process, procedure, and proceedings in the suit here provided for, shall be as provided for in sections one, two, and three of this act." It was evidently intended by this provision that section 3 should be read into and made a part of section 4, so far as the same could be made applicable. There was no error in authorizing a compensation to counsel of 10 per centum on the amount recovered, and the action of the court in that particular was correct.

The judgment of the court below must therefore be reversed and the case remanded with directions to recompute the amount due to the Indians and their counsel in conformity with this opinion, and enter a decree accordingly.

COURT OF CLAIMS.

[No. 16856.]

Johnson Blackfeather, the principal chief of the Shawnee tribe of Indians, v. The United States and the Cherokee Nation.

FINDINGS OF FACT.

This case having been heard by the Court of Claims, the court, upon the evidence, find the facts as follows:

I.

June 7, 1869, the Cherokee Nation and Shawnee tribe, at the city of Washington, entered into the following articles of agreement:

Articles of agreement, made and entered into at Washington, D. C., this seventh day of June, A. D. 1869, by and between H. D. Reese and William P. Adair, duly authorized delegates representing the Cherokee Nation of Indians, having been duly

appointed by the national council of said Cherokees, parties of the first part, and Graham Rogers and Charles Tucker, duly authorized delegates representing the Shawnee tribe of Indians, parties of the second part:

Witnesseth, whereas it is provided by the fifteenth article of the treaty between the United States and the Cherokee Indians, concluded July 19th, 1866, that the United States may settle any civilized Indians, friendly with the Cherokees and adjacent tribes, within the Cherokee country, on unoccupied lands east of 96°, on such terms as may be agreed upon by any such tribe and the Cherokees, subject to the approval of the President of the United States, which shall be consistent with certain provisions specified in said article; and

Whereas the Shawnee tribe of Indians are civilized and friendly with the Cherokees and adjacent tribes, and desire to settle within the Cherokee country on unoccupied lands east of 96°:

It is therefore agreed by the parties hereto that such settlement may be made upon the following terms and conditions, viz:

That the sum of five thousand dollars belonging to the Shawnee tribe of Indians, and arising under the provisions of treaties between the United States and said Shawnee Indians, as follows, viz:

For permanent annuity for educational purposes, per fourth article treaty third August, 1795, and third article treaty tenth of May, 1854, one thousand dollars;

For interest at five per centum on forty thousand dollars for educational purposes, per third article treaty 10th May, 1854, two thousand dollars;

For permanent annuity in specie for educational purposes, per fourth article treaty 29th September, 1817, and third article, 10th May, 1854, two thousand dollars;

Shall be paid annually to Cherokee Nation of Indians, and that the annuities and interest, as recited, and the investment or investments upon which the same are based, shall hereafter become and remain the annuities and interest and investment or investments of the Cherokee Nation of Indians, the same as they have been the annuities and interest and investment or investments of the Shawnee tribe of Indians. And that the sum of fifty thousand dollars shall be paid to the said Cherokees as soon as the same shall be received by the United States for the said Shawnees from the sale of the lands in the State of Kansas known as the Absentee Shawnee lands, in accordance with the resolution of Congress approved April 7th, 1869, entitled "A resolution for the relief of settlers upon the Absentee Shawnee lands in Kansas," and the provisions of the treaty between the United States and the Shawnee tribe of Indians, concluded May 10th, 1854; and also that the said Shawnees shall abandon their tribal organization.

And it is further agreed by the parties hereto that in consideration of the said payments and acts agreed upon, as hereinbefore stated, that the said Cherokees will receive the said Shawnees—referring to those now in Kansas, and also to such as properly belong to said tribe who may be at present elsewhere, and including those known as the Absentee Shawnees now residing in Indian Territory—into the country of the said Cherokees, upon unoccupied lands east of 96°; and that the said Shawnees shall be incorporated into and ever and after remain a part of the Cherokee Nation, on equal terms in every respect and with all the privileges and immunities of native citizens of said Cherokee Nation: *Provided*, That all of said Shawnees who shall elect to avail themselves of the provisions of this agreement shall register their names, and permanently locate in the Cherokee country as herein provided within two years from the date hereof, otherwise they shall forfeit all rights under this agreement.

In testimony whereof the parties hereto have hereunto subscribed their names and affixed their seals on the day and year first above written.

H. D. REESE. [SEAL.]

WM. P. ADAIR. [SEAL.]

Delegates representing the Cherokee Nation of Indians.

GRAHAM ROGERS. [SEAL.]

CHARLES TUCKER. [SEAL.]

Delegates representing the Shawnee tribe of Indians.

Attest:

W. R. IRWIN.

H. E. MCKEE.

A. N. BLACKLIDGE.

JAS. B. ABBOTT.

Said articles of agreement were approved by the Secretary of the Interior and the President June 9, 1869.

II.

Seven hundred and seventy-two Shawnee Indians registered their names, and permanently settled in the said Cherokee Nation; and they or their descendants are now there living in the number hereinafter shown.

III.

The Cherokee Nation has received from the said Shawnees under said articles of agreement the sum of \$150,000.

The estimated value made by the Cherokee national council of the amount of money stipulated to be paid under the agreement was \$195 for each one of said Shawnees.

IV.

The Shawnees were received and recognized by the Cherokee Nation on the unoccupied lands east of 96° and were incorporated into the Cherokee Nation on equal terms and with all the privileges and immunities of a native Cherokee.

The Cherokee Nation, under an act of Congress approved June 16, 1880 (21 Stat. L., 248), received from the United States, in part payment for the sale of Cherokee lands west of 96°, or west of the Arkansas River, the sum of \$300,000, and which amount was paid out by the Cherokee Nation per capita to all Cherokee citizens, share and share alike, and these said Shawnees were included in the said payment. The per capita payment at this time was \$16.55.

The Cherokee Nation, under the act of Congress approved March 3, 1881, received from the United States, as aforesaid, \$48,389.46. This fund was distributed pro rata to the general school and orphan funds; no part was paid per capita. Under the act of Congress approved March 3, 1883 (22 Stat. L., 624), the Cherokee Nation received from the United States, as part payment for the sale of Cherokee lands west of 96°, the sum of \$300,000, of which said amount they paid out \$274,500 per capita to citizens of Cherokee blood only. The Shawnees were by the Cherokee Nation excluded from receiving any per capita share of said money. The per capita amount of this payment was \$15.50.

Afterwards Congress by act of October 19, 1888 (25 Stat., 608), appropriated out of the funds of the Cherokee Nation a sufficient amount of money to pay to these said Shawnees per capita the \$15.50, which was paid to them December 17, 1891.

Afterwards the Cherokee Nation received from the Cherokee Strip Live Stock Association, for grazing, leasing, and occupying the defendants' land west of 96°, \$500,000. Out of this the Cherokee Nation paid per capita to Cherokees (by blood only) \$295.000. This per capita payment was \$15.95. The Shawnees were by the Cherokee Nation excluded from receiving any share of said money.

Afterwards the Cherokee Nation received from the Cherokee Strip Live Stock Association \$300,000 for the leasing and grazing the lands aforesaid, and out of this amount the Cherokee Nation paid per capita the sum of \$298,625 to citizens of Cherokee blood only. This per capita payment was \$13.70.

VI.

December 19, 1891, a commission agreed with the Cherokee Nation for the sale and cession of certain land to the United States for the sum of \$8,595,736.12 (sec. 14, act March 2, 1889, 25 Stat. L., 1005).

The following is determined as the population of the Cherokee Nation (year 1890):

Cherokees by blood	21, 232
Adopted whites	2, 011
Delawares	759
Shawnees	624
Creeks	82
Choctaws	11
Negroes	2, 052
Total	26, 771

The sum paid out to Cherokees by blood was \$593,625. The total population being 26,771, the per capita rate of distribution to the Shawnees would be $22\frac{17}{100}$, amounting in all to \$13,834.08.

COURT OF CLAIMS.

[No. 16856.]

Johnson Blackfeather, principal chief of the Shawnee tribe of Indians, v. The Cherokee Nation and the United States.

DECREE (FILED JUNE 12, 1893).

This cause coming on to be heard upon the petition, answers, proofs, and arguments submitted by the parties, respectively, and the court having heard the same, and considered the just rights in law and equity of the Shawnee Indians who are settled and incorporated into the Cherokee Nation, in pursuance of the authority

vested in the court by the act of Congress entitled "An act to refer to the Court of Claims certain claims of the Shawnee and Delaware Indians and the freedmen of the Cherokee Nation, and for other purposes," approved October 1, 1890;

And it appearing to the court that under the provision of article 15 of the treaty of July 19, 1866, made by and between the United States and the Cherokee Nation and the agreement between the Cherokee and Shawnees, dated June 7, 1869, approved by the President June 9, 1869, the said Shawnee Indians were admitted into and became a part of the Cherokee Nation, entitled to equal rights and immunities and to participation in the Cherokee national funds and common property in the same manner and to the same extent as Cherokee citizens of Cherokee blood:

It is ordered, adjudged, and decreed that so much of the acts of the Cherokee national council of May 18, 1883, and of November 25, 1890, as restricts the distribution of funds which were derived from the public domain to citizens of the nation by blood be held and deemed contrary to and in derogation of the constitution of the Cherokee Nation, and that the said Cherokee Nation or its trustees, the United States, account for, render, and pay to the said Shawnees, out of any funds of the said nation in its national treasury or in the custody of the United States, as trustees, not specifically appropriated by law to other purposes, or out of funds that may hereafter come to the possession of said trustees belonging to the Cherokee Nation, a sum equal to the aggregate amount which the Shawnees would have received if the before-mentioned unconstitutional restrictions in said statutes had not existed.

And it is further adjudged and decreed that the claimants in this suit and those whom they represent, being citizens of the Cherokee Nation of Shawnee blood or parentage, be adjudged and decreed to be entitled to participate hereafter in the common property of the Cherokee Nation in the same manner and to the same extent as Cherokee citizens of Cherokee blood or parentage may be entitled, and that in the distribution of the proceeds and avails of the public domain or common property of the nation among the citizens thereof by distribution per capita at any time hereafter, the defendants the Cherokee Nation, and the defendants the United States, as trustees of the Cherokee Nation, be enjoined and prohibited from making any discrimination between Cherokee citizens of Cherokee blood or parentage and Cherokee citizens of Shawnee blood or parentage to the injury or prejudice of the latter.

And it is further adjudged and decreed as to the participation of the Shawnees in the two funds referred to in the two statutes of the Cherokee Nation hereinbefore declared to be unconstitutional, which sums amount in the aggregate to \$593,625, that such distribution shall be based on the agreed census of the native adopted citizens as ascertained and agreed upon, to wit, 26,771 being taken as the whole number of Cherokee citizens of all descriptions, and the said Shawnees being taken as 624 of said whole number, and that the fund so ascertained, to wit, the sum of \$13,834.08, be paid by the treasurer of the Cherokee Nation or by the Secretary of the Interior of the United States to the individual Shawnees, per capita (according to the above numbers of 26,771 and 624), who would have been entitled to the same if the unconstitutional restrictions and discriminations in said statutes had not existed.

And it is further ordered, adjudged, and decreed that the respondent, the Cherokee Nation, pay the costs of this suit.

And it is further ordered, adjudged, and decreed that the compensation to be paid to Charles Brownell, the attorney and counsel of the Shawnee tribe, or his heirs, administrators, and executors, or assigns, in this cause, be 10 per centum of the amount that the said complainants shall receive under this decree, which compensation is hereby ordered to be paid upon the adjustment and receipt of the amounts as ascertained and paid over or set apart to said Shawnees, to wit, 10 per centum of \$13,834.08, being \$1,383, and that if any further recovery be had under this decree, the right of the claimant's attorney to further cost and allowance be reserved to be hereafter determined and fixed by the court.

And it is further ordered and decreed that if the judgment hereinbefore declared be not carried out and satisfied within six months from the time a copy of this decree shall have been served on and delivered to the principal chief of the Cherokees and the Secretary of the Interior of the United States, the claimants may apply to the court for such further order, relief, or remedy as may be meet.

SUPREME COURT OF THE UNITED STATES.

[No. 671.—October term, 1894.]

The United States and the Cherokee Nation, appellants, *v.* Johnson Blackfeather, principal chief of the Shawnee Indians. Appeal from the Court of Claims.

[November 19, 1894.]

Mr. Justice Brewer delivered the opinion of the court:

This case is similar to that just decided in which the same parties were appellants, and Charles Journeycake, principal chief, etc., defendant. The petition was filed under the authority of the same act of October 1, 1890 (26 Stat., 636), and to enforce the claim of the Shawnee Indians domiciled in the Cherokee Nation to an equal interest in the Cherokee Reservation and Outlet, and the proceeds and profits thereof.

In pursuance of article 15 of the treaty of July 19, 1866, an agreement was, on June 7, 1869, entered into between the Shawnees and the Cherokee Nation, through their representatives, the substantial portions of which are as follows:

"Whereas the Shawnee tribe of Indians are civilized and friendly with the Cherokees and adjacent tribes, and desire to settle within the Cherokee country on unoccupied lands east of 96°: It is, therefore, agreed by the parties hereto that such settlement may be made upon the following terms and conditions, viz: That the sum of five thousand dollars belonging to the Shawnee tribe of Indians and arising under the provisions of treaties between the United States and the said Shawnee Indians as follows, viz, for permanent annuity for educational purposes, per fourth article of treaty 3d of August, 1795, and third article treaty 10th of May, 1854, one thousand dollars; for interest at five per cent on forty thousand dollars for educational purposes, per third article of treaty 10th of May, 1854, two thousand dollars; for permanent annuity in specie for educational purposes, per fourth article of treaty 29th of September, 1817, and third article 10th of May, 1854, two thousand dollars, shall be paid annually to the Cherokee Nation of said Indians, and that the annuities and interests as recited and the investment or investments upon which the same are based shall hereafter become and remain the annuities and interest and investment or investments of the Cherokee Nation of Indians, the same as they have been the annuities and interest and investments of the Shawnee tribe of Indians. And that the sum of fifty thousand dollars shall be paid to the said Cherokees as soon as the same shall be received by the United States for the said Shawnees from the sales of the lands in the State of Kansas known as the Absentee Shawnee lands in accordance with the resolution of Congress approved April 7, 1869, entitled 'A resolution for the relief of settlers upon the Absentee Shawnee lands in Kansas,' and the provisions of the treaty between the United States and the Shawnee Indians concluded May 10, 1854, and also that the said Shawnees shall abandon their tribal organizations.

"And it is further agreed by the parties hereto that in consideration of the said payments and acts agreed upon as hereinbefore stated that the said Cherokees will receive the said Shawnees—referring to those now in Kansas and also to such as properly belong to said tribe who may be at present elsewhere and including those known as the Absentee Shawnees now residing in the Indian Territory—into the country of the said Cherokees upon unoccupied lands east of 96°, and that the said Shawnees shall be incorporated into and ever after remain a part of the Cherokee Nation on equal terms in every respect and with all the privileges and immunities of native citizens of said Cherokee Nation: *Provided*, That all of the said Shawnees who shall elect to avail themselves of the provisions of this agreement shall register their names and permanently locate in the Cherokee country, as herein provided, within two years from the date hereof; otherwise they shall forfeit all rights under this agreement."

The rights of the petitioners are to be determined by this agreement in the light of article 15 of the treaty. The principal difference between this contract and that made between the Cherokees and the Delawares consists in the fact that in this there is no provision for the purchase of "homes" or any payment of moneys on account thereof into the national fund of the Cherokees; but, nevertheless, there is the express stipulation "that the said Shawnees shall be incorporated into and ever after remain a part of the Cherokee Nation, on equal terms in every respect, and with all the privileges and immunities of native citizens of said Cherokee Nation."

For the reasons stated in the opinion in the former case it must be held that this stipulation secured to the Shawnees equal rights with the native Cherokees in that which was the common property of the Cherokee Nation, to wit, the reservation and the outlet, as well as all profits and proceeds thereof.

So far, therefore, as the appellants are concerned, there was no error in the decree.

There is an application by the appellee for a modification of the decree increasing the sums awarded per capita to the Shawnees. It is enough to say in reference to this application that no appeal was taken by the appellee. Without an appeal a party will not be heard in an appellate court to question the correctness of the decree of the trial court. (*The Stephen Morgan*, 94 U. S. 599.)

The decree of the Court of Claims is affirmed.

Smallpox (variola)	2					
Tuberculosis, pulmonary, etc	1,247	551	237	19	126	19
Typhus fever	1					
Whooping cough	406	14	106		7	
ORDER II.—INOCULATIVE.						
Chancroid	43		1		3	
Erysipelas	175	6	23		22	
Gonorrhœa (adenitic, buccal, etc.)	675		3		8	
Hydrophobia			1	1		
Septicæmia (pyæmia)	14	5				
Splenic fever (malignant pustule)	15	1	1		7	
Syphilis, primary, etc	237	17	9		7	
Tetanus (lockjaw)	1	1				
ORDER III.—EXCREMENTITIOUS, OR FILTH PRODUCED.						
Cholera infantum (infantile diarrhœa) ..	327	41				
Cholera morbus (summer diarrhœa)	170	3	21		16	
Diarrhœa	2,088	22	182		118	
Dysentery	664	32	23		10	
Enteric fever (typhoid)	43	12	5		22	3
Typho-malarial fever	11	2	2			
ORDER IV.—MALARIAL.						
Intermittent fever (shaking ague)	1,454	4	440		405	
Remittent fever	625	10	137		84	1
Pernicious fever	6	3	1	1		
Other diseases of this class	8		5		5	
CLASS II.—ABNORMAL CONSTITUTIONAL DEVIATIONS.						
ORDER I.—DIATHETIC OR PREDISPOSED.						
Bronchocele (goiter)	78				1	
Chlorosis (idiopathic anæmia)	73	12	11		9	
Gout	2					
Hydrocephalus (chronic)	2	1				
Leucocythemia (leukæmia)	3	1				
Purpura (spontaneous ecchymosis)	9	2			5	
Rheumatism	1,957	5	60	1	93	1
Rickets (rachitis)	2		1			
Other diseases of this order	1	1			39	
ORDER II.—NEOPLASMS OR NEW FORMATIONS.						
Adenoma	54	1	5		10	
Carcinoma	10	8				
Cystoma	6					
Enchondroma	2					
Epithelioma	3		1			
Fibroma	6					
Fibro-myoma	1	1				
Lymphoma	8				1	
Osteoma		1				
Sarcoma	1					
Xanthoma (fibrous fatty tumor)	2					
Other new formations	8	1	2			

Aggregate of the foregoing tables—Continued.

DISEASES.	Agencies.		Agency boarding schools.		Industrial boarding schools.	
	Diseases.	Deaths.	Diseases.	Deaths.	Diseases.	Deaths.
CLASS II.—ABNORMAL CONSTITUTIONAL DEVIATIONS—Cont'd.						
ORDER III.—DEVELOPMENTAL.						
Difficult dentition	17					
Harelip	2	1			1	
Hernia (femoral, pudendal, etc.)	46	1			2	
Hydrocele	5					
Imperforate anus	1					
Malformations (of bladder, cheeks, feet, etc.)	2					
Paraphymosis	3		1			
Phymosis	6		1		1	
Talipes (club foot)	1					
Other affections of this order	20	14	1		8	
CLASS III.—DISEASES OF FUNCTIONALLY GROUPED ORGANS.						
ORDER I.—THE NERVOUS SYSTEM.						
Anæmia, cerebral	12	3	2			
Angina pectoris	7	3	2			
Apoplexy (cerebral or spinal hemorrhage)	8	9				
Catalepsy	1					
Convulsions	92	18	5		2	
Chorea (St. Vitus' dance)	33	1	8		4	
Delirium tremens (alcoholism, acute)	3	1				
Embolism, cerebral (embolic apoplexy)	1	2				
Encephalitis (inflammation of brain)	4	2				
Epilepsy	22	3	4		3	
Headache	1,116		99		120	
Hemiplegia	4	1				
Hypochondriasis			3			
Hysteria	16	1	8		7	
Insanity (affective, ideational, amentia)	4				1	
Insomnia	6				4	
Meningitis	20	12			1	
Myelitis (acute inflammation of cord)	2	1			1	
Neuralgia	1,470	1	88		253	
Neurasthenia	11				2	
Neuritis	1		3			
Paralysis (agitans, motor, portio dura, etc.)	32	7			3	
Sclerosis (chronic inflammation of cord)	1	1				
Softening	1	1				
Somnambulism			1			
Spasm (histrionic, etc.)	5		1		5	
Vertigo	5				4	
Other diseases of this order	2	1	1		7	
ORDER II.—THE ORGANS OF CIRCULATION.						
Aneurism	9					
Carditis (inflammation of the heart)	15	5			1	2
Debility, cardiac	20	1			5	
Degenerations (arterial, cardiac)	3	2				
Failure, cardiac (syncope)	8	6	1			
Functional cardiac derangement	8		2			
Grave's disease	7	1			1	
Phlebitis	1					
Thrombosis	2	1				
Valvular disease (aortic, mitral, pulmonary)	29	18	1		4	1
Varix	6					
Other diseases of this order	6	2			1	
ORDER III.—THE ORGANS OF RESPIRATION.						
Aphonia	1				1	
Apoplexy, pulmonary	1	1				
Asthma (bronchial spasm)	23	1				
Bronchiectasis	1					
Bronchitis	3,637	45	675		674	
Catarrh, nasal	333		46		23	
Congestion (bronchial, pulmonary, etc.)	185	7	10	1	3	
Deflection of nasal septum	1

^u Delivery as required to November 1, then sufficient to last until May 1; May and June as required.

^v I agree to deliver beef as required from July 1 to December 1, 1894, either monthly or semimonthly, then sufficient to last until March 1, 1895; beef to be delivered by the 1st of December.

^w All beef called for in March, April, May, and June.

^x Between July 1 and November 1.

^y Between May 1 and July 1.

^z To be delivered on or before December 1, 1894, in not more than two deliveries.

¹ Beef called for later than December 1, or in March, April, May, and June, 1895. Will furnish net beef at \$5.97, in not more than two deliveries and not later than December 15, 1894.

² As required from July 1 to November 1, 1894, then enough to last until May 1, 1895; May and June as required. Not more than one-fourth of beef to be delivered during May and June. Will not furnish May and June unless awarded whole contract.

³ For July and August, 1894.

⁴ For September and October, and enough in November to last until May 1, 1895.

⁵ For May and June, 1895.

Monthly deliveries as required. Cattle northern raised. I am to have the privilege of herding on reservation. Average of bid claimed, \$2.93½.

⁶ As required, four months corn fed.

⁷ July to November; delivery as required from July 1 to November 1; then sufficient to last to May 1 1895.

⁸ May and June; during May and June as required.

Cattle according to specifications.

⁹ Net beef. Delivered to agent in equal quarters.

² For July, \$3.50; for August, \$3.10; for September, October, and November, \$2.90; for December, \$3.10; for January, \$3.50; for February, \$3.60; for March and April, \$4.; for May, \$4.10; for June, \$3.80. Cattle as per specifications. Average price, \$3.45 per cwt.

† Beef net.

Or if this bid is not the lowest, and is not accepted, then I will furnish 600,000 pounds gross beef at Crow Creek, S. Dak., and 650,000 pounds gross beef at Lower Brule, S. Dak., as called for, at the same price for each month above offered for Cheyenne River Agency. Cattle according to specifications.

s July, August, and September.*t* October.*u* November.*v* December.*w* January.*x* February and March.*y* April.*z* May.¹ June.

Average \$3.24, to be delivered every month of contract year to cover monthly current issues and to conform to specifications governing requirements. Bidder to have the privilege of putting up hay and holding cattle for winter issues on reservation, if agreeable with Department. Cattle to be hay fed during winter. Contract to embrace any number of months to be taken consecutively that may be selected, and with deliveries each month as required of amount not less than monthly issues. Cattle as per specifications. If contract for this agency is not awarded me I will furnish 600,000 pounds beef at Crow Creek and 650,000 at Lower Brule Agencies, S. Dak., under the same terms and at the same figures as specified above, with the exception of the months of May and June, 1895; those two months I will furnish, May at \$3.40 and June at \$3. If monthly deliveries, as proposed above, are not satisfactory, will then deliver cattle as required by the Department at above prices.

a If Pine Ridge offer is not accepted, and under same conditions.*b* July.*c* August, September, October, and November.*d* December.*e* January.*f* February, March, and April.*g* May.*h* June.*i* July.*j* August and September.*k* October.*l* November.*m* December.*n* January.*o* February.*p* March.*q* April.*r* May.*s* June.*t* As required.*u* Monthly.*v* If the delivery of the total amount awarded me is apportioned equally among the twelve months as required.*w* As in *v*, except that deliveries are to be monthly.*x* July.*y* August.*z* September.¹ October.² November.³ December.⁴ January.⁵ February.⁶ March.⁷ April.⁸ May.⁹ June.

Deliveries as required each month of the year, excepting such term of consecutive months as may be selected and reserved for issue of reservation beef, and to be not less each month than the amount used in current issues. Cattle to be according to specifications.

Average, \$3.28½. To be delivered every month of contract year, to cover monthly current issues and to conform to specifications governing agency requirements. Bidder to have the privilege of putting up hay and holding cattle for winter issues on reservation, if agreeable with Department. Cattle to be hay fed during winter. Contract to embrace any number of months to be taken consecutively that may be selected, and deliveries each month, as required, of amount not less than monthly issues. If monthly deliveries as proposed above is not satisfactory, will then deliver cattle as required by the Department. Cattle as per specifications.

Claims privilege of pasturing cattle and putting up hay on agency reservation. Cattle according to specifications and to be hay fed during winter.

As in *v* and *w*, or I will furnish the entire amount awarded at Rosebud Agency, or any part thereof, not less than one-third, at the following monthly prices, delivered as required, during the months. This proposal is not to be considered, however, if I am awarded two-thirds or more of the Pine Ridge contract.

advertisement of April 10, 1894, for furnishing supplies, etc.—Continued.

REPORT

OF THE

BOARD OF INDIAN COMMISSIONERS.

WASHINGTON, D. C., *February 9, 1895.*

SIR: The Board of Indian Commissioners, pursuant to the act of May 17, 1882, respectfully submit their twenty-sixth annual report.

Since our last report we have suffered a grievous loss in the death of our highly esteemed colleague, Hon. Elbert B. Monroe, of Tarrytown, N. Y. At a meeting held in New York May 31 the following minute was offered by President Gates, and unanimously adopted:

Mr. Elbert B. Monroe has served on this board since December 17, 1891. He has shown himself deeply interested in all that concerns the education, the civilization, the Christianization of the Indians. His experience in business life in New York, his sound judgment, his gracious and attractive personality, and his invariable devotion to principle, and advocacy of the highest standards, and the most unselfish spirit in all dealings with the Indians have made him a valuable member of the board and have endeared him to us all. We wish to express to the members of his family circle our high appreciation of his character and our sense of personal loss in his death.

We regret to report, also, the death, during the last year of two former members of the board, Gen. George Stoneman, of California, and Hon. A. C. Barstow, of Rhode Island, the latter having served faithfully and efficiently several years as our chairman.

The vacancy caused by the death of Col. William McMichael, in 1893, was filled, by the appointment January 29, 1894, of Hon. Charles C. Painter, whose long experience and service as agent of the Indian Rights Association rendered him a valuable accession to our board. But after serving a little less than one year he was suddenly removed by death. At a meeting of the board held January 15, 1895, the following minute was offered by Commissioner Garrett, and unanimously adopted:

We were anticipating a career of great usefulness from Mr. Painter as a member of this board, when he was suddenly removed from works to rewards, on the 13th of January.

He was in many respects peculiarly fitted for his position, having great vigor and energy in discovering and exposing abuses in the Indian service, zeal in the defense of the Indians' just rights, and perseverance in urging upon the Government and Congress important measures in their interest. His recent visit to the Pottawatomies, of Oklahoma, was the last undertaken by a member of the board.

His long experience in the cause in connection with the Indian Rights Association made him one of the best informed men in this country on the Indian question, and he was not infrequently consulted by the President and Members of Congress on important subjects upon which they desired information in this connection.

His loss will be severely felt by the board, and we sincerely sympathize with his family in their sudden bereavement.

PURCHASE OF SUPPLIES.

As required by law, we have been present at the opening of bids and the awarding of contracts for Indian supplies, in consultation with the Commissioner of Indian Affairs, and we can testify that fairness and strict impartiality have been the rule in this important business. The number of proposals received and publicly read was much larger than in any previous year, amounting to 600, and the prices ruled surprisingly low. The vast amount of samples filling the warehouses seemed at first sight appalling, but with the help of competent experts all were carefully examined, and such selections were made as seemed best for the service. From the inspection which we have been able to make, we believe that the goods delivered have been fully up to the sample, and we hear very few complaints from the agencies and schools as to the quality of the supplies received. The sweeping charges of fraud in the Indian service which are sometimes published are founded upon traditions that have come down from former times.

Last spring the contract business was divided between Chicago and New York. We can not see that anything was gained by this arrangement. It is true that some large classes of supplies are purchased at the West, such as bacon, beef, flour, corn, and agricultural implements, and the theory is that Chicago is nearer the source of supply. But many contractors and their agents assured us that it was quite as convenient to send their bids to New York, and it is evident that the division of the work involves a considerable increase of expense. But after the experiment of the last year the Secretary and the Commissioner will be able to judge wisely as to the future.

FIELDWORK.

During the year we have visited and inspected Indian agencies and schools in North Carolina, Indian Territory, Oklahoma, New Mexico, California, and the schools at Carlisle and Hampton. Reports of these tours of inspection will be found in the appendix. We invite special attention to the report of Commissioner James in respect to the condition and needs of the Navajo Indians of New Mexico, and to that of Commissioner Painter relating to the sale and lease of lands by the Absentee Shawnees of Oklahoma and the sad condition of the Kickapoos.

CONFERENCES.

As in former years, we have held public conferences with the secretaries of religious societies conducting Indian missions and schools, and other friends of Indians, at Mohonk Lake and in this city. The large attendance at those meetings and the earnest discussion of all phases of the Indian problem evince an unabated interest in the work of educating and civilizing the Indians. Full reports of the proceedings of those conferences are forwarded herewith, and we need only to invite attention to some salient points—the condition of the Indian Territory; the working of the severalty law; the leasing and selling of allotted lands, and the school question.

INDIAN TERRITORY.

The graphic picture drawn by Senator Dawes of the sad state of affairs in this Territory, occupied and owned by the Five Civilized Tribes, was to many a new revelation. Those Indians have so often

been held up as models of civilization, conducting a wise self-government, supporting their own schools and courts of justice, and enjoying all the comforts of home life, that it was surprising to hear that the courts and legislative bodies are utterly corrupt; that the public school system is primitive and inefficient; that the lands belonging to the whole people by treaty rights are, to a large extent, absorbed by a few enterprising half-breeds, who have gained complete control, and pay no attention to the welfare of the great majority of the people; that crime goes unpunished, and that the white people who have settled in the Territory have no protection. But all this has long been a familiar story to us. We have repeatedly called attention to the deplorable facts. Twenty years ago, in our report for 1874, we said:

The experiment of independent local governments on the part of those Indians has been tried for a sufficient length of time to test its practicability, and has not proved satisfactory in its results.

A delegation of this board visited the Territory in December, 1874, and consulted with the leading men of the several tribes, but after a full and friendly discussion the Indians declined to take the initiative or participate in any movement leading to a change in their national condition or relations with the United States. The commissioners, however, after a full consideration of the subject, recommended that a Territorial government be established by the United States, the governor to be appointed by the President, and the legislative body to be elected by the people of the Territory.

Again, in the autumn of 1882, our secretary visited the Indian Territory, and "the conclusions reached by him after several weeks of observation and extensive traveling in that country confirm the views presented in our report for 1874. The reasons which then existed for legislation by Congress for the better protection of the rights of person and property within the Territory still exist, and time has added to their force." In subsequent reports for 1884, 1886, and 1889, we repeated our earnest conviction that a better government than now exists is needed—a government including the whole Territory, and preparatory to its organization as a State and its admission into the Union. From time to time relief measures have been proposed and considered in Congress, but no legislation resulted. Now, however, an earnest effort has been begun to settle the important and vexing problem.

A commission, authorized by the act of March 3, 1893, has been appointed by the President, and has been some months in the field endeavoring to persuade the people themselves to take the initiative, and consent to an equal allotment of their lands, and to the establishment of a Territorial government with a view to the ultimate creation of a State of the Union. This commission has failed, as their published report shows, on account of the selfish interests of a few leading men. It may, therefore, become necessary for Congress to exercise its sovereign power, abrogate existing treaties, and adopt such measures as equity and justice may require to secure the protection and welfare of all the people residing in the Territory, rigidly guarding all vested rights of property. That large tract of valuable land can not always remain in seclusion, and present conditions can not much longer be endured. The number of United States citizens residing, rightfully or wrongfully, in the Territory, is very large—some say 300,000—and is increasing at a rapid rate. A vast amount of property has accumulated in their hands. Many are employed upon the railroads and in mining; others are trading or raising stock, or cultivating farms. There are also teachers, ministers, and physicians, with their families.

For all these there is no adequate protection of property or life, and no provision for the education of their children. Nor are the Indian citizens in much better plight. With several distinct local governments, each claiming national prerogatives, it is easy for criminals to escape from one "nation" to another, and so avoid punishment. No one of these sovereignties claiming independence is strong enough to protect itself. When unlawful intruders encroach upon its borders, or intestine disturbances arise, as a few years ago among the Creeks, and of late among the Chickasaws and Choctaws, an appeal is at once made for United States troops to keep the peace and give protection. An end must be put to such an anomaly. A government should be devised which will give to all the people, without distinction of race, the equal protection of law, and make all citizens of the United States. Under wise legislation the Indian Territory may soon become prosperous, and be admitted, a strong and wealthy State, into the American Union.

LANDS IN SEVERALTY.

The work of allotting and patenting lands to individual Indians under the act of 1887 has been continued during the year, and is progressing as fast as means and wise prudence will permit. Four thousand and forty-two patents have been delivered, 2,001 allotments have been approved in the General Land Office, and 3,792 allotments have been completed and await final action. The work is going on upon twelve reservations, as well as among nonreservation Indians scattered about in several Northwestern States. These last have come to see that public lands are being taken up rapidly by whites, and that they must soon secure homes and adopt the ways of civilization. Eight hundred and four patents have been issued to such nonreservation Indians.

We see no reason for fear or doubt as to the wisdom of the allotment policy. It may have been pushed too rapidly. We think it has been in some instances, for example, among the Cheyennes and Arapahoes of Oklahoma. But this hurried action was required by the terms of special agreements which gave insufficient time for wise precautions. On the whole, so far as our observation extends, the policy is working well. Under it individual Indians are slowly learning lessons of independence and self-reliance. Many are acquiring habits of industry, and are advancing each year toward civilization and entire self-support. The picture, however, is not all bright. There are evils incident to the allotment policy to correct which further legislation will be necessary. One evil, and we earnestly called attention to it immediately after the enactment of the general allotment law in 1887, is that allotted lands being exempt from taxation an unjust burden is thrown upon white residents in the near vicinity of such lands.

The Indian enjoys the privileges of citizenship, but is exempt from its duties. The country where he lives is organized into counties and towns. Courts, public buildings, schools, roads, and bridges must be maintained. It can hardly be expected that the white citizens will pay willingly all those expenses, nor is it just to require it. Provision should be made for reimbursing to the States the amount which they lose by the exemption of Indian lands from taxation. To secure this result an act passed the Senate February 6, 1893, but it failed to pass the House. A similar act was introduced at the first session of the present Congress, but has not yet become a law. We hope the subject may receive early attention. Another embarrassing evil incident to

the allotment policy is the unrestrained sale of intoxicating liquor to Indians who have received allotments. It is claimed, and in some cases the courts have decided, that such Indians are citizens of the United States and subject to the laws of the States in which they reside, and that the laws of the United States prohibiting the sale of liquor to Indians do not apply to them.

The soundness of these decisions is questioned by the Commissioner of Indian Affairs, as it was by his predecessor, but how to deal with the matter and protect the Indians from the dangers to which they are exposed, is a difficult problem. That the danger is real and serious is proved by reports from the Omaha, Shoshone, Grande Ronde, and other agencies where Indians are making disastrous use of their liberty, and are going rapidly to ruin. The sad facts furnish a strong appeal to all missionaries and teachers, agents and inspectors, to exert all their influence to restrain the Indians from evil habits and to train them to a life of sobriety. The chief hope lies in the schools, where the character of the next generation will soon be determined.

LEASE AND SALE OF ALLOTTED LANDS.

In the Indian appropriation act approved August 15, 1894, it is—

Provided, That whenever it shall be made to appear to the Secretary of the Interior that by reason of age, disability, or inability any allottee of Indian lands under this or former acts of Congress can not personally and with benefit to himself occupy or improve his allotment, or any part thereof, the same may be leased upon such terms, regulations, and conditions as shall be prescribed by the Secretary for a term not exceeding five years for farming or grazing purposes, or ten years for mining or business purposes: *Provided further*, That the surplus lands of any tribe may be leased for farming purposes by the council of such tribe under the same rules and regulations, and for the same term of years as is now allowed in the case of leases for grazing purposes.

With reference to this provision we are glad to find in the late report of Commissioner Browning the following:

It has been repeatedly stated that it was not the intent of the law nor the policy of the office to allow indiscriminate leasing of allotted lands, which would defeat the very purpose of allotments, but to permit such leasing only when the allottee "by reason of age or other disability" is unable to occupy his land. If an allottee has physical or mental ability to cultivate an allotment by personal labor or by hired help, the leasing of such allotment should not be permitted.

Yet in spite of the rules and regulations and precautions of the Department many leases have been executed. We find reported 223 farming and grazing leases of allotted lands on the Omaha and Winnebago reservations approved during the last year, and 72 on other reservations. It is easy for an interested person, who covets the use of an Indian's farm, to make it appear that the allottee can not profitably occupy and improve his allotment, and under the plea of disability or inability almost any Indian may ask the privilege of leasing, for the word inability may be made to cover anything down to simple laziness. The sad effects of the law are already apparent among the Omahas, many of whom, living upon the proceeds of leases, have fallen into habits of idleness and intemperance. We think that more rigid restrictions should be adopted, and that leases should be approved only in rarely exceptional cases. We are inclined to favor the plan proposed by Mr. Austin Abbott at the Mohonk conference, to relegate the business to the courts, whose decisions shall determine what leases are necessary and what disposition shall be made of the proceeds for the benefit of allottees.

Another danger threatens the allotment policy—that the provision

making allotted lands inalienable for a period of twenty-five years and longer, in the discretion of the President, may be annulled by special legislation. We find a beginning of such legislation in the act approved August 15, 1894, which provides—

That any member of the Citizen band of the Pottawatomie Indians, and of the Absentee Shawnee Indians of Oklahoma, to whom a trust patent has been issued under the provisions of the act approved February 8, 1887, and being over twenty-one years of age, may sell and convey any portion of the land covered by such patent in excess of eighty acres, the deed of conveyance to be subject to the approval of the Secretary of the Interior, under such rules and regulations as he may prescribe, and that any Citizen Pottawatomie not residing upon his allotment, but being a legal resident of another State or Territory, may in like manner sell and convey all the land covered by such patent, and that upon the approval of such deed by the Secretary of the Interior the title to the land thereby conveyed shall vest in the grantee therein named.

We fear that this measure may foreshadow great peril to one of the most important and beneficent intentions of the general allotment bill. The temptation to gain ready money by the sale of their lands will be very great to the shiftless and idle, and the result will be a large class of Indians without homes and means of support. We are getting possession of Indian lands quite fast enough by the purchase of large unallotted tracts, and we can surely leave the allotted lands to their owners until a generation shall be educated to appreciate their value, and use them for their own and their children's benefit.

EDUCATION.

We were apprehensive that the reduction of appropriations for Indian schools would compel some curtailment of the work, but we are glad to find that such has not been the result. On the contrary, there has been some advance both in enrollment and in average attendance, as shown by the following table:

Enrollment and average attendance at Indian schools, 1893 and 1894.

Kind of school.	Enrollment.		Average attendance.	
	1893.	1894.	1893.	1894.
Government schools:				
Nonreservation training	4,346	4,350	3,621	3,609
Reservation boarding	6,780	7,631	5,447	6,140
Day	3,589	3,249	2,165	2,079
Total.....	14,715	15,230	11,233	11,828
Contract schools:				
Boarding.....	4,182	4,048	3,449	3,507
Day.....	616	598	342	428
Boarding, specially appropriated for	1,327	1,281	1,113	1,152
Total.....	6,125	5,927	4,904	5,087
Public day schools	202	226	123	132
Mission schools, not assisted by Government; boarding and day pupils.....	75	68	43	49
Aggregate	21,117	21,451	16,303	17,036
Increase.....		334		793

It will be seen that in all the schools there has been a gain of 334 in enrollment, and of 793 in the average attendance. The largest gain is found in the Government boarding schools, while in contract schools there has been a slight falling off in enrollment though a gain in average attendance. The drift of public sentiment seems to tend toward a

withdrawal of Government aid from the last named schools, which are under private control. The subject has been much discussed in our conferences, in the public press, and in Congress. In the Indian appropriation bill for the current year it is provided that—

The Secretary of the Interior is hereby directed to inquire into and investigate the propriety of discontinuing contract schools, and whether, in his judgment, the same can be done without detriment to the education of the Indian children; and that he submit to Congress at the next session the result of such investigation, including an estimate of the additional cost, if any, of substituting Government schools for contract schools, together with such recommendations as he may deem proper.

What recommendation* will be made we do not know, but we trust that nothing will be done to the detriment of the education of the Indian children. A sudden withdrawal of all aid might compel the closing of many contract schools, depriving their pupils of facilities for education, while, if time is given to the mission boards and other organizations that conduct such schools to prepare for the change, and appeal to their constituents for means, they may be able to continue many, if not all their schools. We should regret to see them closed. We can not forget the great good they have done. They grew out of mission schools, and mission schools were first in the field doing earnest and useful work long before the Government began to educate Indian children. Nor can we forget that these societies have expended, during the last ten years, for the support of Indian schools and missions, more than three millions of dollars, and that they have rendered to the Government more than full recompense for the aid they have received. Nor again should it be forgotten that the contract schools are distinctively Christian schools, and for that reason we hope they will be continued, though Government aid be withheld, for it is manifest that the most pressing need of the Indians now is instruction, line upon line, in Christian truth and Christian morals. Law alone will not change his character and save him. Liberty will not save him, unless he learns to use liberty without abusing it. And if by larger appropriations the Government shall afford facilities for secular education to all Indian children, the religious bodies will find use for all their resources in direct missionary work. But there are yet large needs in the education system, which we can hardly hope to see immediately supplied. In some tribes there are no schools. In others, only a small percentage of the children have school privileges. Nearly 4,000 are unprovided for on the Navajo Reservation. So that for some years to come there will be room for all the work that mission schools can do.

PUBLIC SCHOOLS.

We hope for some relief and good results from the plan now successfully inaugurated, of placing Indian children in the public schools of the States and districts where they reside. During the last year 259 pupils have been provided for in this manner. The fee of \$10 per quarter is a material help in the support of district schools, and the attendance of Indian children will cultivate a friendly feeling between the races. And for many Indians, scattered over the country like the Hualapais in California, separate schools can not be provided without too large an outlay. The public schools afford the only opportunity for their education. We shall be glad, therefore, to second by whatever influence we can exert, the purpose of the Commissioner and superintendent to "make every effort by pressure and persuasion to increase attendance of Indian

* The recommendation is a reduction of 20 per cent per annum.

pupils at public schools." * It is a step toward the transference of the whole work of Indian education to the States, and making unnecessary specific Indian schools.

TEACHERS AND INSTITUTES.

The wisest theories of education, the most elaborate organization, and the most liberal expenditure of means will all fail of good results without competent executive agents. In the Indian school work the teachers are the executive agents. Their teaching and character will mold the minds and character of their pupils, with whom they are in constant contact. Their unconscious influence will often be greater than their direct instructions. Hence, we are pleased to observe the earnest care now exercised by Superintendent Hailman and the Civil Service Commission in the examination of applicants for positions in this service. And we were gratified to read in the report of the superintendent respecting the operations of the civil-service law that "in spite of the limitations it imposes upon the appointing officers, it exerts on the whole a most salutary influence upon the character of the service." We heartily agree with him in the "hope that in due course of time every position in the Indian school service will come within the provisions, or, at least, under the spirit of this law."

The teachers' institutes, or summer schools, can not fail to benefit the whole school work. The meeting of large numbers of teachers from distant and isolated stations, the friendly consultations, the comparison of experiences, the discussion of methods of discipline and instruction, and manual training, addresses and papers, and practical lessons by trained educators, must be productive of good results. And after spending a week or ten days together the teachers will go back to their fields inspired with new courage and hope.

AGENTS AND EMPLOYEES.

As the educational work depends almost entirely upon the ability and character of the teachers, so the civilization and progress of the Indians depend largely upon the faithfulness and capacity of the agents and employees. We have often urged that appointments to these positions be made on the ground of merit alone, and that removals be made only for good cause after a fair hearing. We therefore read with great satisfaction and gratitude in the late report of the honorable Secretary of the Interior the following earnest words:

If any army officer fills the place, he must do so with the enthusiasm of a soldier in line of battle. If a civilian fills the place, he is unfit for the task, unless moved by an earnest, zealous, inspired purpose to accomplish the noble work of helping to elevate a weaker race. Something of the missionary spirit should be in the heart of every employee at an Indian agency or Indian school. I can not claim that the present administration has uniformly succeeded in selecting people of the character described, but it is the earnest purpose of the Indian Bureau and the Department to study the employees throughout the entire service, to make proficiency the sole standard of retention in office, and to make apparent capacity the sole ground for new appointments.

The work of the development of the Indian is necessarily slow. Their peculiarities must be studied and understood, not as a whole, but as members of particular tribes, before those engaged in their supervision are fit for successful work. Permanency of service, therefore, is absolutely necessary to success. I believe it is possible to develop a competent, permanent, nonpartisan Indian service, and I hope before the end of another year that such progress will have been made in this direction that its realization will be assured.

We heartily indorse this hope, and shall rejoice to see it fulfilled. We also join with the Secretary and Commissioner in earnestly recom-

mending a larger appropriation for the employment of field matrons. No branch of Indian education and training is more useful than this house-to-house visitation and instruction of Indian women in the arts of domestic economy, and we trust that the recommendation of the Department may receive favorable consideration.

NEW YORK INDIANS.

The appropriation bill for the current fiscal year provides:

That the Secretary of the Interior be, and hereby is, authorized to make a thorough investigation of the facts touching the so-called Ogden Land Company.

The alleged claim of this company to the lands of Seneca Indians has been a great hindrance to the progress of these Indians toward independent citizenship, and to the allotment of their lands in severalty. The measure now adopted is a hopeful step toward a settlement of the long-standing difficulties.

RECOMMENDATIONS.

We have no new policy to propose. Faithful administration and persistence in well-doing are all that is required. Some of the Indian agencies can soon be dispensed with; two have already been discontinued, but it will be many years before all can be closed. The talk of abolishing all agencies and the Indian Bureau is, in existing conditions, idle talk. We recommend extreme caution in this direction. When released from the authority and deprived of the oversight of the agent even the most advanced Indians will still need the advice and help of some competent and trusted friend. We suggest that when it is found advisable to close any group of agencies, like those on the Pacific Coast in Washington, some one of proved fidelity and experience be appointed to act for all as their best friend in matters of difficulty requiring help and counsel.

We recommend (1) a modification of the laws relating to the leasing and sale of allotted lands; (2) the placing of the entire Indian service under regulations of the civil-service law; (3) an increase of appropriations for education.

INT 94—VOL II—65

APPENDIX.

REPORT OF THE PURCHASING COMMITTEE.

SIR: The purchasing committee of the Board of Indian Commissioners submits its report, as follows:

According to directions from the Indian Bureau, sealed proposals for the following annuity goods and supplies for the Indian service: Agricultural implements, wagons and wagon fixtures, harness, saddles and leather, household furniture, wooden and hollow ware, lamps, glass and tin ware, stoves, iron, nails, and hardware, paints and oils, beef, pork, bacon, lard, flour, wheat, corn, oats, barley, feed, and salt, were opened on May 15, at the Government warehouse, Nos. 130 and 132 West Washington street, Chicago, Ill., in the presence of Hon. D. M. Browning, Commissioner of Indian Affairs; P. C. Pollock, representing the honorable Secretary of the Interior, and five members of the Board of Indian Commissioners. A large number of bidders and several reporters were present. A great variety of samples was offered.

Mr. D. C. Cregier was appointed superintendent of the warehouse, and the following as inspectors to examine the samples offered, also to examine the goods when delivered to see that they were equal to the samples from which the awards were made:

E. L. Cooper, for agricultural implements, hardware, stoves and tinware, furniture, and miscellaneous articles; E. C. Hickey, for harness, leather, etc.; D. C. Cregier, jr., for paints, oil, and glass; E. Theile, for medical supplies; W. H. Crocker, for flour, corn and oatmeal, hominy, hard bread, and salt.

The inspection of samples and the awarding of contracts were completed May 30. On the 31st of May sealed proposals, as per advertisement from the Indian Bureau, for blankets, woolen and cotton goods, clothing, boots and shoes, hats and caps, notions, crockery, groceries, coffee, tea, sugar, rice, and beans were opened at the Government warehouse, Nos. 77 and 79 Wooster street, New York, in the presence of the honorable Commissioner of Indian Affairs and several members of the Board of Indian Commissioners, bidders, and reporters. The competition among bidders was greater than usual, the bids in Chicago and New York being about 600, and prices were very low. Inspectors were appointed by the Commissioner of Indian Affairs, as follows:

H. D. Graves, for groceries and supplies; John H. Bradley, dry goods; A. T. Anderson, clothing; W. B. Hazleton, boots and shoes; John Weber, hats and caps; G. A. Ferguson, medical supplies; E. L. Cooper, crockery and sundries.

Mr. H. D. Graves was appointed superintendent of the warehouse.

The examination of samples and awarding contracts in New York required the attention of the board three weeks. The chairman of your committee made frequent calls at the warehouse after June 30, during the examination and shipment of goods, and was informed by the superintendent that only one invoice of goods had been rejected by the inspectors as not being equal to the sample from which the award was made, a small invoice of hosiery, which was promptly replaced by the contractor, to the satisfaction of the inspector. The superintendent reports that 29,089 packages of goods, weighing 4,139,583 pounds, were shipped from the New York warehouse during the year 1894.

WILLIAM H. LYON,
Chairman Purchasing Committee.

Hon. MERRILL E. GATES,
President Board of Indian Commissioners.

REPORT OF E. WHITTLESEY.

WASHINGTON, D. C., *March 1, 1894.*

SIR: I have the honor to report that on the 20th ultimo I was present at the opening of bids in Chicago, Ill., for live stock and agricultural implements. Eighty-nine proposals were opened and read in the presence of many contractors by the

honorable Commissioner of Indian Affairs, and after due consideration and inspection, contracts were awarded for about 10,000 head of live stock and for wagons, harness, plows, and other implements, the contract price for the whole amounting to over \$400,000.

All present seemed to be satisfied that the business was conducted with entire fairness and impartiality.

Very respectfully,

E. WHITTLESEY, *Secretary*.

Hon. MERRILL E. GATES, *Chairman*.

WASHINGTON, D. C., *April 25, 1894.*

SIR: I have the honor to report that pursuant to your request I have visited the Eastern Cherokee training school at Cherokee, N. C. The superintendent, Mr. Thomas W. Potter, has had previous experience in the Territory of Oklahoma and a year's training at Carlisle. He found the Cherokee school in a demoralized condition on account of changes of superintendent and teachers, but by earnest work and aided by a corps of competent teachers he is bringing it up to its former prosperity under Mr. and Mrs. H. W. Spray. The number of pupils in attendance is 80, all that the appropriation provides for and all that the buildings can accommodate. Larger facilities are much needed. This is the only school for 400 children of school age. Of course many who would attend must be rejected for want of room and means of support. The buildings are all old and going fast to decay. A new and larger schoolhouse is needed, and a dormitory for boys, the buildings now occupied being utterly unfit for use. A storeroom should also be provided without delay. All the supplies are now carried up two flights of stairs into the attic over the girls' dormitory, a building not constructed to safely sustain such weight.

Besides the regular schoolroom work, in which I found the children bright and interested, industrial training is carried on as far as means allow. The girls are taught cooking and sewing and laundry work, and the boys various mechanical arts, and especially farming, all working one-half of each day. I found them planting the spring crops.

The tone of contentment and cheerfulness among the pupils and the excellent character of the employees give promise of a useful and prosperous school.

Respectfully,

E. WHITTLESEY, *Secretary*.

Hon. MERRILL E. GATES, *Chairman*.

REPORT OF COMMISSIONER ALBERT K. SMILEY OF A VISIT TO THE MISSION INDIANS MADE IN THE SPRING OF 1894.

At the request of the United States Board of Indian Commissioners, I visited the principal reservations of the Mission Indians of southern California in the spring of 1894. I was very desirous of visiting these Indians, as I was chairman of the commission which set aside all the reservations for the Mission Indians in the spring and autumn of 1891. The other members of the commission were Judge J. B. Moore, of Michigan, and Prof. C. C. Painter, of Washington.

The law of Congress which created the commission makes it the duty of the Indian Bureau, upon the acceptance of the report of the commission by the President and Secretary of the Interior, to issue patents to each tribe for their lands, which are to be inalienable for twenty-five years. Whenever, in the judgment of the Secretary, the Indians at any reservation are far advanced enough to hold lands in severalty, an allotting agent may be appointed to divide the lands.

I find that less than half of the reservations have as yet been patented, delays being occasioned in some instances by imperfect surveys. It is desirable that all the patents should be issued as soon as possible, and that more of the reservations should be allotted in severalty.

The first reservation visited was San Jacinto, formerly called Saboba, which I reached Wednesday afternoon, the 4th of April, 1894. I found a new schoolhouse had been erected in a new location, not so attractive as the old place, which had shade trees near the house. The school was in session, under the charge of Miss Mary L. Noble, who has held her position for eight years. She is an energetic and faithful teacher, and has her pupils well in hand. When addressed, the scholars answer promptly and distinctly, with head erect and eyes fastened on the teacher.

Many of the older boys were at home taking care of the stock, while the men were away sheep-shearing. One of the progressive Indians had taken a contract to shear 25,000 sheep. An Indian can shear from 30 to 45 sheep a day, and receives 5 cents a sheep, besides board.

I regret to say that the money thus earned is frequently lost in gambling with low whites and Mexicans, and rarely reaches the needy families at home.

The title to the lands which these Indians occupy was secured to them through the efforts of the Indian Rights Association—especially through Herbert Welsh, its secretary. This reservation contains some very fertile lands along the creek, producing peaches, grapes, corn, beans, and alfalfa in abundance. The Indians make their own wine from the Mission grapes and drink to excess.

I was greatly interested in a beautiful and interesting paper which the Indian pupils publish, called the Saboba News. It is most tastefully gotten up, with pen-and-ink sketches of schoolhouse and children on the cover; and the daintiness is not all on the cover. Within are many little bits of art, advertisements of pottery and baskets, beautifully illustrated, with a neatness that would do honor to any school for white children.

Some trouble exists in regard to the election of a captain. Usually the captain holds his office for one year. Some time since the Indians in council deposed their captain and elected another, being dissatisfied with his enforcement of discipline. The agent refuses to give the newly-elected man his commission, rightly, I think; for if the authority of the captain can be superseded by a council under temporary dissatisfaction there will be an end of all discipline.

On Thursday afternoon I reached Coahuila Reservation, which is situated in an elevated valley nearly 4,000 feet above sea level, where frost occurs nearly every month in the year. Grazing is about the only industry that can be followed.

There is one little side valley that is quite fertile, where a few of the progressive Indians live and try to raise beans and other crops. In some instances the crops have been ruined by frost after four successive plantings. Is it to be wondered at that the Indians get discouraged?

The more industrious Indians do what is done at nearly all the reservations—go to the nearest white settlements and eke out their slender incomes by sheep-shearing, pruning vines, ditching, and other industries. Notwithstanding all the difficulties in the way of making a living these Indians are deeply attached to their homes and could not well be induced to leave them. Even the Indians who live in the forlorn Colorado desert could not be persuaded to remove to Banning, so attached are they to the homes and graves of their ancestors.

Among this tribe, numbering 250, there is only 1 half-breed; all are full-blood Indians, and they are proud of it. It is only within a few years that these people would be willing to take medicine from a white man. They have their own medicine men, and put great faith in them. One case has been told me of a young man 18 years of age, who was ill with pneumonia. The medicine man was called in and, before the teacher's eyes, he jumped up and down repeatedly upon the sick man's chest, making signs and barking like an animal, to frighten the evil spirit away. It is needless to say that the man was dead in half an hour. I am happy to say that such scenes as this are becoming rare.

The more progressive Indians are eager to have their lands allotted to them in severalty; but this can not be done at present, as the patent for the reservation has not been issued owing to some dispute about the correctness of the survey.

These Indians are quite temperate and industrious, probably owing to their distance from the whites.

I visited the school at Coahuila, which is the largest Government day school among the Mission Indians. The teacher, Mrs. Saulsbury, is an excellent woman, devoted to her calling—has developed true manliness and character in her pupils—but she lacks enthusiasm, so desirable in an Indian school.

Dr. Anna M. Johnson fills the position of field matron at this reservation. She is a woman of rare ability and energy, and gives her services unstintingly for the benefit of the Indians. She encourages the women to improve their homes, and has established a valuable industry—basket making. She has a large sewing class of forty women, who learn to make their own clothes. She is also a physician, and gives much gratuitous medical advice.

Her success has not been so complete as it deserves to be, partly owing to the natural antagonism of the Catholics to a Protestant matron, and partly to a fear on the part of the Indians that some land which Dr. Johnson endeavored to secure as agent for the Women's National Indian Association might work injury to them. The 5 acres of land which was promised to her by the Indians is located just below their Warm Springs, and includes a valuable spring of fresh water. Miss Johnson had no intention to deprive the Indians of the free use of this spring; but the Indians, who are suspicious of the whites, feared they might lose their valuable water right. A prejudice thus created tended to curtail Miss Johnson's valuable services. All attempts to procure the land have long since been abandoned.

On Friday afternoon I reached Agua Caliente (Warner's Ranch) at 2 o'clock, but was disappointed in finding the school dismissed early, owing to the indisposition of the teacher, Mrs. Babbitt. She gave me much valuable information in regard to the condition of affairs at the reservation.

It is well known that there are invaluable hot springs at this place, which are a source of much revenue to the Indians. Two of the more enterprising Indians have erected rude bath houses and charge 25 cents a bath. Large numbers of white people visit the springs in summer, some to be cured of rheumatism and other disorders by the hot sulphur baths, and some to lead a loose life in company with a low class of people who congregate here.

There are quite a number of comfortable adobe houses in close proximity to the springs which are rented in summer to whites at \$2 a week for each occupant, whether one or twenty take lodgings in the one-roomed house. The Indians are very careful not to allow any white person to build a house near the springs and cut off their source of revenue. Nearly all the income from the rent of houses and bath houses goes into the pockets of two or three Indians. The others gain a scanty sustenance by cultivating small patches of land, and by working for white ranchmen at sheep-shearing or general farming.

The lands which these Indians occupy are a part of an old Mexican grant. When the United States acquired California by conquest from Mexico it was stipulated in the treaty of Guadalupe Hidalgo that the Indians should not lose the possessory title to their lands which they then occupied. The late ex-Governor Downey, who held a controlling interest in the ranch, began a suit to eject the Indians, claiming that they had not occupied these lands continuously since the United States acquired possession of the country. The suit is still pending, owing to the absence of Senator White, the attorney for the heirs of the late ex-Governor Downey. It is confidently believed that the Indians will win their suit.

Mrs. Babbitt, the teacher of the day school, has held her position for four years, and is greatly interested in her work. When the sheep-shearing band was about to start she called a council and induced the Indians to have a messenger sent to Riverside and bring the money earned in shearing to her, to be given to the families at home and not be lost in gambling, as is too often the case.

These Indians are much annoyed by a worthless Mexican, who, contrary to United States law, brings whisky to them in a wagon covered with shrubs to conceal it. After renting a house, which he secures by deception, he begins his demoralizing sale. The captain ordered him off, with no success. After consulting with Mrs. Babbitt, he sent one of his men to buy whisky to secure evidence against the Mexican.

After securing the evidence the Indians rushed into the house, seized the man and took him to Los Angeles to be tried. As usually happens, the jury (white) decided against the Indians, and these poor people returned home discouraged, having barely escaped being locked up for housebreaking. Race prejudice is too strong in southern California to secure a fair administration of justice.

The women seem to be very industrious. One house was visited where they were ironing great piles of bedding, white as snow, each sheet and pillowcase trimmed with most exquisite lace. Ramona, at whose house I slept, spent the whole evening making new pillowcases. She wanted everything clean and new.

Besides the Government teacher, Mrs. Babbitt, there are two other ladies who are employed for the purpose of stimulating the Indians to lead a better life. One of them, Miss French, is in the service of the Government as field matron, and the other, Miss Hallowell, M. D., is in the employ of the Women's National Indian Association. These two excellent ladies live together and work in harmony, endeavoring to induce the Indian women especially to improve their mode of living and to practice various industries. They have only been partially successful, owing to the continual opposition of the Catholic element.

On Saturday I climbed the mountains of the finely situated and fertile lands of the Mesa Grande Reservation. Notwithstanding these Indians have some of the best lands in southern California, well adapted to fruits, grass, and grains, with plenty of water, they are the most degraded on account of intemperance and gambling.

Mrs. Nickerson, the teacher of the Government school, says they have feasts (fiestas) every Saturday night, lasting till Monday morning, and the children are utterly demoralized. Monday there is almost no response to the teacher's efforts. The children fall asleep at their desks. These fiestas are held at nearly all the reservations and are especially demoralizing at San Jacinto. Severe measures should be taken to abolish them. They are a great hindrance to the moral and material progress of the Mission Indians. They tend to perpetuate the old degrading customs and beliefs of the Indians, pay a premium to pauperism, and are a veritable hotbed of disease, physical and moral.

A spelling match was arranged between the two schools at Mesa Grande and Agua Caliente, the latter going to Mesa Grande. The match was decidedly one way, Mrs. Babbitt's children standing alone at the end, and all the Mesa Grande children were seated, having missed. There was a most dissatisfied and sullen look upon the faces of the parents of the Mesa Grande children. Something must be done at once, and so the captain arose from his seat with a smile, and with an ingenuity equal to the

occasion, quietly remarked, "it would not do for us to beat the Agua Caliente children; they are our visitors."

During the afternoon I drove through the beautiful and well-cultivated Santa Isabel grant, and after descending the steep mountain came upon a pleasant valley upon which live by sufferance the owners, a band of Indians, who are not allowed to cultivate any land, and who derive their principal support by working for the whites at a distance. A short distance from the present Indian village is a very fertile, well-watered tract of land which the Indians occupied and cultivated only a few years ago.

The Indians had an undoubted possessory title to these lands, having occupied them from time immemorial. Some few years since the owners of the Santa Isabel ranch forcibly ejected the Indians from their ancestral home and placed them upon their present site, from which they are liable to be driven at any time. These Indians seem to be particularly simple-hearted, inoffensive, and religious, and the present insecure tenure of their homes is much to be deplored.

I shall never forget the sight which greeted me as I approached the Indian village and came suddenly upon the graveyard, where men, women, and children were assembled. They were having a religious service of some kind; about forty Indians were slowly walking in and out among the graves, chanting their dirges as they moved, the old men supported by the younger ones, women and children all acting with so much quiet dignity. In the center of the plot was a large wooden cross, possibly 8 or 10 feet high, and before this they would kneel and go through a responsive service, led by an old, blind man. Every few minutes the old Mexican bells, near the rude brush church were tolled, adding still more to the solemnity of the occasion.

There is no school for the children to attend, although there are enough to form a good school. They begged me to intercede on their behalf, and get the Government to establish a school on Government land near their village. Their request is a most reasonable one, and I earnestly hope they will be provided for.

On Sunday morning I passed through the village, talked with many of the Indians, and visited the church, if church it could be called. It was a rude brush house; in many places the branches had fallen out, leaving just the bare framework. An armless doll, dressed in white, with a painted face and Normandy cap, having a string of beads around its neck, stood upon a wooden box. On either side were tin cans filled with flowers; and, just as I was leaving, a child came and brought two brass candlesticks, to be placed on either side of the flowers. Here the people worship Sunday after Sunday, kneeling on the ground in front of the image, which represents the Virgin Mary. It was hard to believe that this scene was within 5 miles of a comfortable hotel and not very far from a populous city.

On Monday I reached La Jolla, a fertile and beautifully situated reservation, lying high up on the side of Smith's Mountain. The lands have recently been allotted in severalty by Mr. Carrere, to the almost universal satisfaction of the Indians.

The Government school is under the charge of Miss Golsh, who has held her position for many years. She is a faithful and enthusiastic teacher; has the entire confidence of her pupils, and holds the discipline with a firm hand.

A spirit of progress seems to prevail here, many new houses having been built and much new land fenced and cultivated since I visited this place three years ago.

On Monday afternoon I went to Rincon Reservation, the lands of which have been recently allotted in severalty by Miss Kate Foote. All the Indians seem pleased with their allotments, and are taking hold with increased vigor. The success attending the dividing up of the Indian lands at La Jolla, Rincon, Pachanga, and Pala, should be a stimulus to continue the good work at other Mission reservations; so that the Indians shall have a permanency of possession of the improvements which they individually make.

The Government school at Rincon is under the charge of Miss Ora Salmon, who has had a long and successful experience among Mission Indians and is doing fine work. Miss Salmon has purchased a piece of land a short distance from the reservation, and has built a neat and comfortable adobe house, with verandas covered with choice roses, and has a fine orange grove adjacent. It is an ideal home, and furnishes the Indians a splendid object lesson.

Since my last visit a neat schoolhouse has been erected on high ground, overlooking the beautiful valley where are the cultivated lands of the Indians. I visited the school and was much interested in a variety of exercises well performed, and the pupils all joined in repeating the twenty-third Psalm.

On Tuesday I passed by the Indian village on the Pauma grant. The lands connected with this village were secured to the Indians three years ago by the persistent efforts of the Mission Indian commission.

Still further on I visited the Pala Reservation, containing a very small body of land which has recently been patented in severalty. The Indians of this reservation were offered lands at other places by the Indian commission, but declined to remove from their old homes containing the graves of their ancestors.

On Wednesday, the 12th, I visited the Pachanga school, not far from the village of Temecula. The schoolroom was perfectly laden with a variety of beautiful wild flowers which the little Indian children had brought to the teacher. At nearly every one of the eight day schools that I visited the teacher's table was heaped up with wild flowers.

It is such a pity that so many schoolhouses are wrongly located, where no water for irrigation can be had. All the teachers would be glad to have a little spot of land adjoining the schoolhouse inclosed, upon which they could cultivate flowers and fruits for their own pleasure and for an object lesson to the Indians.

The pupils at this school, as well as at all the other day schools, are mostly young, in consequence of the removal of many older pupils to the Government boarding school at Perris, and to the contract schools at Banning and San Diego. Since my last visit a new schoolhouse of inferior character has been erected in the place of the one burned during the agency of Mr. Rust.

There is great need of piping water for domestic purposes to the schoolhouse and to neighboring dwellings. The drinking water has to be brought 2 miles by the women, which is exceedingly discouraging.

Mrs. Platt, the teacher, is a woman of strong character, who not only performs her regular duties of instructress, but exerts a strong influence in keeping away low whites who live in neighboring villages. She gives freely of her salary for the benefit of the Indians, and has had great success in temperance work.

The last school visited on this trip was the large Government boarding school recently erected at Perris. The 80 acres of land upon which the buildings are situated has only a limited supply of water, and does not seem a suitable place to raise fruit and vegetables. The selection of this site must have been made by some one with other motives than the welfare of the Indians and best interest of the Government. I learn that the land company who sold the 80 acres to the Government gave 10 acres, valued at \$1,000, to the official who selected this spot. It is a shame that this school was not located near Whittier, Redlands, or Riverside, where a fertile, well-watered, sheltered spot could have been chosen, and where the whites are more sympathetic with the Indians.

There are 117 pupils in the school, drawn from all the reservations except those near the Catholic contract school near San Diego. Several important industries have been established, including dressmaking, shoemaking, carpentry, and farming, as much as the wind-swept land will allow.

The general work of the house is performed by the pupils. They make delicious bread, do all the cooking, laundry work, and house-sweeping and cleaning.

There are many excellent points in the management of the school, but I do not think the discipline is well administered. Such a school as this is a great boon to the Mission Indians.

On Monday morning, the 23d of April, 1894, I went from Redlands to San Diego to visit the Catholic Indian school, receiving scholars under contract with the Government. On arrival at San Diego, I drove 6 miles up the valley of the San Diego River to the old Mission station, established by the Franciscan Fathers in 1769. When I visited the place three years since, the roof of the picturesque old church was partly fallen in, and everything looked desolate. Now the roof is entirely gone, and the walls are crumbling.

I find that two buildings of plain architecture, one for boys and one for girls, have recently been erected, one on each side of the old Mission church. The furniture of the buildings is of the simplest kind; but perhaps it is elaborate enough for Indian children taken from the very humblest homes. It is not well to make the style of living in an Indian school so fine that the pupils in after life can not hope to imitate it.

I reached the place about 2 o'clock and found the school dismissed for the afternoon on account of its being wash day. The girls, with the help of some boys, had done all the washing and ironing, and were busy mending the clothes.

At my request both boys and girls were called together in their separate schoolrooms for inspection. The pupils went through a variety of exercises, showing careful training and good discipline. Nearly all the work of the schools is done by the children, under the direction of the five Sisters. The services of the Sisters are rendered gratuitously, and the Indian children do nearly all the work, thus making a very economical arrangement for the institution.

On the 20th day of April, 1894, I visited the St. Boniface industrial school at Banning, under the charge of the Catholics. This school was built by Miss Drexel, of Philadelphia, and receives about 100 pupils under contract with the Government. The location of the school is very fine, being at the foot of Grayback Mountain, 2 miles high, and facing the magnificent San Jacinto Mountain, with a beautiful valley between.

There is a good farm under high cultivation, and the whole establishment seems in a thriving condition. Miss Drexel is putting up a large building, the upper story of which is for boys' dormitories and the first story for industrial work. This school,

as well as that at San Diego, is under the charge of the Sisters of St. Joseph, whose headquarters are at St. Louis.

The children went through a variety of exercises, such as singing, exercises in spelling, reading, and exercising with dumb bells. The industrial work is on a limited scale at present. I inspected the small shoe shop and harness shop, where a few pupils receive instruction. I was much impressed with the kind, motherly demeanor of the Sisters, and I doubt not they exert a very healthful influence over their charge. They are very careful to instil order and neatness. Much time is given to religious instruction. The catechism is carefully taught and devotional exercises are regularly held. These remarks apply to all the Catholic schools which I have visited—Santa Fe, Yuma, San Diego, and others.

I think, however, that the mental discipline and industrial work is not to be compared to many of the Government schools, such as Carlisle, Haskell, and Genoa. It is quite time for the Government to assume control of all the Indian education. Nearly all the religious denominations have withdrawn from the Government support of their Indian work. This rule should be universal. Religious and moral instruction should, of course, find a leading place in all schools, but sectarian training should cease.

The educational interests of the Mission Indians seems to be well provided for. The day schools receive all the younger pupils, and when more advanced, they are removed to the Government boarding school at Perris and to the contract schools at Banning and San Diego. Some friction occurs in gathering in pupils to the three schools, as there seems to be no systematic way of assigning pupils; but each school collects pupils by a law of its own.

The schoolhouses for the day schools I found to be generally in good repair, and suitable for their purpose. In three instances I found an opening in the ceiling for ventilating the schoolroom; but the attic of the room was entirely closed, and the air of the room was foul. I suggested making an opening at each end of the attic, thus creating a current. Except at Rincon, one end of the schoolhouse is fitted up for a home for the lady teacher, and contains a small kitchen and lodging room. At La Jolla the teachers' quarters are entirely too small.

I think it is about time for the Government to discontinue issuing wire for fencing, wagons, plows, harness, and tools of various kinds. Articles given to the Indians are not valued properly, and consequently not cared for. There is great opportunity for favoritism in the distribution of goods, and the whole tendency is to pauperize the Indians.

The Mission Indians are very skillful in making pottery. They make many ollas (water jars), some of which are most artistically covered with figures. The children make clay animals—horses with bridles and saddles, roosters—each well proportioned. They have a natural eye for form and color. They make beautiful baskets, which have recently had a wide sale.

The Indians should be encouraged in such industries, as work for the older people and education for the younger ones form a leading part in solving the Indian problem.

ALBERT K. SMILEY.

REDLANDS, CAL., *May 5, 1894.*

REPORT OF DARWIN R. JAMES.

I have the honor of presenting the following report of my recent trip among the Indians as a member of the board:

ZUNI PUEBLO, NEW MEXICO.

This is the largest of the Pueblo tribes, all of which, some eighteen in number, are under the supervision of Capt. John L. Bullis, U. S. A., agent, whose headquarters are at Santa Fe.

Population, 1,600, and increasing, according to census returns. Up to the present time the Government has had no school here, although Captain Bullis has had instruction concerning the establishing of two day schools. The sum of money mentioned as available for the erection of the buildings has proven inadequate, hence nothing has been done. The Presbyterian Church has a prosperous school, numbering 45 children between the ages of 6 and 12. It was for the purpose of studying the question in all its bearings and to decide what to recommend that we visited the reservation. The school work of this church is under the care of the woman's executive committee of their Board of Home Missions. The Zuni school has been carried on entirely as benevolent work, without any aid from the Government.

In the report sent by the Territorial authorities of New Mexico to the Twentieth National Conference of Charities and Correction, a chart from which was sent to the World's Fair last autumn, is this statement: "That the Board of Home Missions of the Presbyterian Church has a greater number of schools established among the Indians and New Mexicans than are maintained by the Government and all other religious denominations together." Usually they are very efficient and well managed schools. This is such. The buildings are situated upon the plain half a mile or more distant from the pueblo. The superintendent, Miss Dissette, is a woman of force and large executive ability. She has acquired much influence over the Indians. The agent, Captain Bullis, is doing all within his power to aid her in her work. The school is more than full, and our visit was to see if enlargement shall be undertaken by the Presbyterians so as to include all of suitable age (between 5 and 12), or if the work should be turned over to the Government.

The plan under which the school works is this: The children reside at home, but they are clothed by the board and are given a substantial noonday meal. It will be seen that they are under the care of the teachers and matrons most of the day. They assist in the kitchen and in the laundry, and do other little things as may be necessary. This is to compensate for their clothing and food. The plan works admirably; the parents are pleased, and the children love their teachers, the school, and each other. They are kept clean, and in a sense are an example, and are teachers in their own homes, where they go at close of school each day. There is no difficulty in keeping the attendance up to the full number. Under the old plan and in the early days it took constant effort to keep the scholars reasonably regular in attendance.

The Zunis are not unlike others; they are selfish, and they are influenced largely by this motive. They consider that they are getting something. In fact, if the school is to be enlarged and the educational work left for the Presbyterians to carry on, it would be well for the Indian Office to recognize the superintendent in the distribution of any favors, such, for instance, as wire for fences, which is being given out to a limited extent, and for which the Zunis are begging.

The fact of recognition by the Indian Commissioner gives influence and helps the school. It seems a small matter, and yet is important. Two buildings are used, one being adobe, which belongs to the Government; the other is built of stone, and belongs to the Presbyterians. New roofs have recently been placed upon the buildings by the latter, so that they are now reasonably comfortable. The Presbyterians have asked the Government to turn the property, particularly their building, over to them, as they have expended so much money upon it. They have also asked that certain land adjoining the school be exchanged for the same number of acres on the opposite side, the thought being that if the school is to be enlarged and new buildings erected it is desirable to erect them upon that side, and to erect a high wall to shield the buildings and surrounding grounds as much as possible from the wind and severe sand storms which come from that direction.

There seems to be no reason why such exchange can not readily be made. As a rule the Government does nothing for Pueblo Indians. They have always been self-supporting. Strictly speaking, they are citizens.

Still, like other Indians, they look to Washington for aid. Small supplies of barbed wire for fencing have been doled out to the Zunis, and one mowing machine, which practically is of little use, as will be seen further on. The agent has sent a request for two additional mowing machines and for three scrapers. The latter are used in making irrigating ditches.

Several years ago Congress appropriated \$10,000 for the erection of a dam across the stream which enters the valley near the pueblo, to supply water for the irrigation of said valley. The Zunis, however, believing that there was some sinister designs which they could not see, declined to have the Government do the work. They attempted to do the work at their own cost, and made a contract to this end, but when completed the dam washed away with the first high water. They own three fertile, well-watered valleys, Nutra, Pescado (fish springs), and Ojo Caliente (hot springs).

There seemed to be a suspicion in their minds that the Government was giving them irrigation in the valley, where they live, and was going to deprive them of the above-named valleys, where are their farms.

These valleys are many miles from the pueblo and from each other, with high hills between, which is the reason why one mowing machine does not meet the requirements.

It can be hauled from one valley to another only at great waste of time and money. They should have one in each valley, and should be supplied with wire for fencing. The post trader informed me that his sales of farm wagons to the Zunis would aggregate 200 during a few years. Latterly he is not doing much business; in fact, times are rather severe upon the Indians here, as well as the whites elsewhere. Wool, which is one of their principal crops, is only bringing 5 cents a pound. Still, these Zunis are not complaining. They are fairly good workers. When the planting

season arrives they leave the pueblo and go to these farms, returning after the planting is done. There is more or less of religious ceremony connected with it all, for they are deeply religious, although pagans. There are many exceedingly interesting things in the Zunis, and one can not remain with them without conceiving a high regard for many of their traits of character, although they have many equally bad ones.

My judgment is that there will be no great difficulty in getting them to take lands in severalty, to leave the pueblo and live in their own separate houses, when the proper time comes for bringing about this change; but the question will have to be handled wisely by judicious men—men in whom they can have confidence—as they are very independent and self-contained.

NAVAJO.

Most of the Navajo Reservation is within the bounds of the Territory of Arizona, and the agency at Fort Defiance is also across the line, although the post-office address is Fort Defiance, N. Mex. Lieut. Edward H. Plummer, U. S. A., is the agent, having been detailed to this service in April, 1893. Numerically the Navajo is the largest of the Indian tribes, and their reservation is very extended; still, it apparently is not large enough, as we will see later, and they are to be found with their flocks encroaching upon lands outside their own limits. Like the patriarchs of old, they are in search of watered pastures for their flock, and do not mind boundaries very much. Like the Apaches, also, they have led a predatory life, and the term "robber" is not too strong when describing what they once were, before being nominally hemmed in by the lines bounding a reservation. They are peaceful now with their neighbors, and the Pueblo Indians no longer dwell in fear of them. The census report gives them a million and a quarter of sheep, and they have many ponies. Heretofore they have been self-reliant and independent of Government aid; in fact, the impression has been made that they were usually well to do; but the agent informed me that many of them are on the verge of starvation through a succession of dry summers and the present low price of wool (5 cents per pound).

The nominal price of these sheep is \$1 per head, but there is no market for them, and their ponies at the rate of \$1.50 to \$7 or \$8 each, according to value, bring in nothing, as there are no buyers. It is to be hoped that the development of irrigation, work upon which ought to be commenced speedily, may bring them some money.

I fear very much that the Government may be obliged to extend the helping hand during the coming winter. It is exceedingly gratifying that Commissioner Browning has given the agent authority to purchase from them such blankets as are needed in their school instead of procuring the annual supply from New York. He can buy a 12-pound blanket for about \$3.60. The double blankets issued to schools weigh about 8 pounds. The price may seem high, but the Navajo blanket has the reputation of being made to wear a long time. The agent has also asked that the supply for other schools be purchased there. Perhaps it can be done to some extent, which is desirable.

Indications clearly point to the fact that a revolution is going on in the minds of these conservative people, and it has come somewhat suddenly. Apparently it is the result of the coming of Lieutenant Plummer as agent. He had some severe tests shortly after his arrival, but he handled the difficulties with such a firm hand and so justly that he won their respect and confidence, and there has been no outbreaks since. He spends much time away from the agency in going over the reservation, which he has found to be very profitable to the Indians. He conceived the idea last summer that it might be a good plan to select a certain number of leading members of the tribes and have them taken to the World's Fair at Chicago, his thought being that its educational effects would be good. The Indian Office saw the wisdom of the plan, and gave permission to take fifteen, but informed him that there was no money which could be used for the purpose. Lieutenant Plummer then laid the matter before Herbert Welsh, secretary of the Indian Rights Association, who saw it might be wise to have the Indians make the trip, whereupon he collected and remitted to the agent the sum required, viz, \$700.

On their return a sort of impromptu reception was held at the agency. The scholars and teachers were present; also such Indians as were near at hand. Speeches were made by the excursionists, which showed how remarkably they had been impressed with what they saw; these speeches were translated and taken down in English, and are added at the close of this report. They are an interesting study, for they show thought and appreciation, besides the development of the untutored mind. The stories of the travelers speedily circulated over the immense reservation, and the results are now being seen. The Indians are asking for more school accommodations and for industrial training; they tell the agent that they want to learn all practical industries—blacksmithing, carpentering, wagon building, harness making, farming, etc. Practically it is a revolution, for this tribe has been so intensely

conservative. The one school at the agency, suitable for about 130 scholars, could be kept full only by constraint, with many absentees. Now if the children go home the parents bring them back, and there are no absentees.

In September it opened with 15 scholars. At the time of our visit, three weeks before the time for closing the school for the summer vacation, there were 199 enrolled. Every week witnesses the bringing in of fresh scholars. They are badly crowded, three boys in a bed and sometimes four, which is very unwise.

The agent stated that he had seen an occasional one cry because of being turned away. It seems almost fabulous; I never before heard of such a thing at an Indian school. A great problem is presented to the Indian Office; what can be done for the education of the Navajo children? Here are 20,000 Navajoes, and at least 4,000 of school age, with school accommodations for less than 150. They are an exceedingly interesting people, having many excellent traits of character, and have not been much contaminated through intercourse with unprincipled whites. They are not so lazy and the men have some ideas of property and thrift, an unusual thing among the Indians. The proposition of the Commissioner to establish a few day schools on the reservation, for which Congress has given him a small sum, is so utterly inadequate that it is hardly worth considering.

The sum suggested for each plant is too small, as the agent has informed Commissioner Browning. Day schools, if sufficient in number and conducted upon the plan which works so admirably among the Zunis, would accomplish a good deal, and the school at Fort Defiance could be enlarged and made an industrial training school for this tribe, which seems a very desirable thing to be accomplished. But something radical in the way of enlargement ought to be done and entered upon without delay, for the Navajoes seem ready for it. In some individual cases they are getting dissatisfied with their houses and are talking about the houses of the white men, but there is only one sawmill upon this great reservation; they say that if a wagon breaks down they are obliged to travel many miles to the agency to get it repaired. They want their boys to learn this and other trades, for it is so necessary for their convenience. They are asking for farming implements and tools, which indicates progress.

To show how the spirit of thrift is working in one instance, I mention a fact as reported by Lieutenant Plummer. He pointed out the man to me and said: "Shortly after I came last year I proposed to him that we cultivate a piece of land on shares, sowing oats; he agreed and did his part of the work. The crop was gathered, a portion of his share (he had a third) he sold during the winter to the Government for \$150, which led him early this spring to bring to the agent \$40, requesting that he buy seed oats, as he was going to cultivate that land this year on his own account, without going shares with Uncle Sam."

It was exceedingly gratifying to the agent, who secured for him the seed oats and helps him as is necessary.

The great need is irrigation and it was expected that some work would be accomplished this spring, but the sum of \$60,000 is available from appropriations by Congress.

The reservation was carefully surveyed and plans drawn by army engineers, to one of whom might have been intrusted the development of the work and the expenditure of the money rather than to a civilian at increased expense. Mr. E. C. Vincent, the civil engineer who has the matter in charge, was making slow progress in perfecting arrangements to begin the work. It was quite evident, however, that the season was too far advanced to allow any expectation of benefit for this year's crops. Mr. Vincent's aim is to employ Indians as far as possible in doing the work, which will be a great blessing, as many of them are quite destitute.

The agent has sent requests to the Indian Office that the reservation be extended to the Little Colorado River, westward, also to extend a portion of it southward, as indicated in the drawings accompanying the request. Practically the Navajoes are occupying the territory in question, and it might be desirable for the Commissioner to consider the request favorably, although the time is not far distant when the "lands in severalty" law will come into operation here, and the reservation be wiped out.

As things now are, difficulties are arising in the neighborhood of Moencopic between the Indians and Mormons, who are there without authority. At the time of our visit there was a delegation of Indians from beyond Keams Canyon at Fort Defiance in consultation with Lieutenant Plummer upon this subject. They are very earnest in their desire for this extension.

The agent has also asked that the Damon farm, which is near the school and is needed for garden and agricultural purposes, be purchased. There is no doubt about the desirability of the purchase, particularly if this school should be enlarged and made an industrial training school. The land is fertile and artificially well watered. To improve the water system for the agency Lieutenant Plummer had nearly completed the excavation in the rock of a huge tank with capacity of 30,000

gallons. It is situated on the side of the mesa at an elevation of 150 feet above the plain upon which the buildings are situated. From the well which he is digging at the foot of the hill he proposes to force the water to the elevated tank.

In case the well does not supply sufficient water he will use it as a reservoir, conveying to it some of the water which comes from up the canyon and which is now conveyed past the well in a ditch to the valley below, where it is used for irrigating purposes. His plans seemed eminently practical and inexpensive, for his purpose was to use an old, castaway, but still good, portable engine and boiler, whereby to obtain power to elevate the water to the tank upon the hillside. Coal can be had on the reservation at a distance of only 8 miles.

A visit to the warehouse where are the school supplies was made and the merchandise inspected. Scarce any complaint was heard; none except in such minor matters as in colors and quality of goods for girls' wear, and patent buttons for boys' trousers. It was exceedingly gratifying to learn that there was little or no sickness among the scholars, who seemed happy and very much attached to the superintendent, Miss Merritt, and the agent, Lieutenant Plummer. The corps of teachers were unusually good, being ladies of experience and character, who were working together in harmony and in the right spirit. The Methodists have a pastor here who conducts a religious service Sabbath evenings in the school hall. In addition to his other duties he is to be employed by Engineer Vincent, as an assistant, to look after the Government property, tools, etc., used in developing irrigation.

INDUSTRIAL TRAINING SCHOOL, ALBUQUERQUE.

This school is situated about 2 miles from the city, upon a level piece of fertile land which has the advantage of abundant water for irrigating purposes. It is a well-arranged plant consisting of many buildings, all of which, as well as the grounds, were kept in good order and condition. Originally the buildings were purchased from the Home Missionary Society of the Presbyterian Church, who maintained here a large and successful school, having a contract with the Government. At request of Commissioner Morgan the property was turned over to the Indian Office, since which time it has increased somewhat and become one of the large training schools. Special Agent John Lane has been in charge for several months, and has kept the standard high; he was anticipating being relieved shortly, as Mr. Avery, the new superintendent, was daily expected.

The Albuquerque school suffers from lack of drainage more than from any other one thing. It is a somewhat difficult problem for an ordinary mind to grasp, the ground being quite level, rendering necessary the employment of power to raise the sewerage, should the plan be adopted of causing it to flow into a reservoir. Colonel Lane, the agent, was giving much thought to the general question, as he saw the importance of successfully solving the problem.

Upon the school roll were the names of 283 scholars, all of whom were present except 2.

There was a general appearance of happiness and contentment on the part of the youth and young people, which is always pleasing to see at an Indian school. The visits to class rooms, although not of extended duration, showed that the scholars were doing well. In one class room, in the absence of the regular teacher (a temporary vacancy), one of the scholars, a Pima girl, was instructing the scholars, some of whom were larger and older than she, but she was doing the work with dignity and ability. In fact there were two Pima girls acting as teachers with much satisfaction. They were educated at the Presbyterian school at Sacaton, Ariz. It was also gratifying to meet several young men who were equally competent to teach industrial branches—these Pueblo or Pima Indians—two were in the shoe shop and one in the harness shop. There were 19 employees under the acting agent. Mr. Lane had reduced the force somewhat through consolidating the positions of industrial teachers and disciplinarian, also the positions of farmer and engineer.

We saw evidences of good work in the kitchen, bakery, harness shop, shoe shop, tailor shop, and dressmaking room. What little we saw of the farm work was favorable, although we did not make careful inspection. There is a large accumulation of fine harness which ought to be turned into money. The office has sent word to sell at auction, but the agent had a feeling that it might be unwise to offer so many sets in such a small place as Albuquerque. They might be sold to better advantage at Kansas City or some other large place. The farmer keeps 16 boys at work and has 12 hired out to local farmers. The dormitories were clean and fresh and the conduct at the tables and in marching to and from the dining room was good. Only one sick with a serious trouble (pulmonary), and she was at the table, showing that she was not very ill. We saw quite a number who were well along in years and who possibly ought to make room for others—men grown—rather unusual. A prosperous school with a good teaching corps.

SANTA FE NORMAL AND TRAINING SCHOOL.

Practically nothing has been done here in the way of instruction during the school year. Supervisor Col. Thomas M. Jones, who came last September, expects to be appointed superintendent on July 1 and Mrs. Jones to be made matron. The scholars were transferred mostly to the school at Fort Lewis prior to the arrival of Mr. Jones. He expects that some of them will be sent back at the beginning of next school year. The plan seems to have been to make this a normal training school. I am not sure as to why the plans have been changed, but the proposition now is to have a normal school, an industrial training school, and a primary school, with kindergarten instruction, all under one roof. There evidently was a misunderstanding last autumn, for some few advanced scholars came who have been waiting many months for studies to begin. There are 40 Indian children and young men and women here, of whom perhaps half came for the normal course. A number of the young men were doing good work upon the substantial picket fence which Colonel Jones was having put up along the front of the grounds.

We met two intelligent-looking Omaha Indian girls who came last September and who have been unable to accomplish anything during the school year. There is but one teacher, and she only recently arrived, Miss Anna Egan, who ranks high as a kindergarten teacher. We also met the blacksmith, who acts as disciplinarian. The new plan contemplates clothing the boys in a uniform. The seamstress was employing some of the girls. The plant is of large proportions and worthy of the great United States Government. The laundry may be pronounced perfect. Plenty of water for the buildings and for irrigating purposes.

If the Indian Office contemplates training and preparing Indian young men and women for the work of teaching in Indian schools—and it is an experiment worth trying, in my judgment—this is an admirable place where to make the effort. I hope it may be a great success.

The climate is healthful, the buildings are spacious and well arranged for light and ventilation, and the 106 acres of land is ample for farming pursuits.

The second of the series of institutes arranged by Dr. Heilman, for superintendents, teachers, and other employees in the Indian service, is to be held here from July 9 to July 14. Mr. and Mrs. Jones were arranging to accommodate the guests and were doing all within their power to make the occasion a thoroughly profitable one; they were quite enthusiastic over the favorable outlook.

RAMONA SCHOOL, SANTA FE.

Professor Chase, the superintendent and manager, was absent, therefore we were unable to consult him. Mrs. Chase did us the honor of making us acquainted with the work. She informed us that Mr. Chase was in the East soliciting funds for the school. The grounds are just outside of the city, upon an elevation, and contain 16 acres. There are 69 scholars, 27 boys and 42 girls. Professor Chase has a contract with the Government for 64 scholars at \$125 per annum each. Ages of the scholars 6 to 16, two being over 16. It might be called a family school, for scholars, teachers, and the family of Professor Chase are necessarily thrown together as one, because of lack of room. The children do the housework, half working and half studying.

The accommodations are insufficient for so large a number. One building is of brick and is fairly well adapted to school purposes; the other one is rented from a Boston gentleman, and is situated upon land adjoining the school property; it is a frame structure and not what is needed; in fact, it is ill adapted to the purpose for which it is used. A new and large structure is in contemplation, however, and a number of the boys were hard at work upon adjoining property engaged in brickmaking. This work is being done upon shares, Professor Chase having made arrangements with a firm to do the work in this way. The clay bed is a good one; the distance to the site where the new edifice will stand is not many rods, so the brick for the structure can not cost much delivered at the place needed. For a year Professor Chase has had full charge, and evidently it has kept him hard at work to maintain the institution. Indications pointed to a lack of money, and things generally were not in as good order as one could have wished, and yet the scholars seemed happy and contented; saw some thirty in the recitation room, saw a good many girls in the sewing room, and others at various occupations.

The teachers and helpers were not numerous and had a good deal to attend to. They were as follows: Miss Burger, teacher; Miss Hosmer, assistant matron; Mrs. Landon, seamstress, and Miss Aldrich in the cooking department. The scholars were from various places; 4 recently came from the normal school, as they were not wanted there (so we were informed); a large number were from Laguna (Pueblo), being transferred from a Presbyterian school, which had been closed; others were from the Santa Clara and Nambé Pueblos; 7 were San Carlos Apaches. The Ramona school is well known in the Eastern States, it was formerly connected with the

Congregational Church, receiving from the American Missionary Association some of the funds necessary for its support. The property is now held by the trustees of the University of New Mexico, ex-Governor Prince being president of the board, and is independent of all denominations.

ANADARKO.—KIOWAS AND COMANCHES.

As one enters the Indian Territory from the south by the Rock Island Railroad, which runs from north to south through the Territory, and near the line separating it from Oklahoma, he passes into the land belonging to the Chickasaw Nation. At the time of our visit two members of the Dawes Commission were holding meetings and discussing with the people plans for the extinguishing of their rights and for the settlement of the great question of the opening up of their lands to the public. It is a momentous question with many points to be considered, for many and varied interests are involved. The subject of the opening of these lands was uppermost in the minds of all whom we met, and all were eager for definite information. It is estimated that there are 100,000 people within the limits of the Chickasaw Nation. Possibly this is an overestimate, but there is a large number of people living and working within the limits of this Indian nation, virtually without law and without schools for their children; they are occupying houses erected upon sites which they do not own, and are hedged in and restricted because of force of circumstances beyond their control. It is true that they are within the bounds of the little Chickasaw Nation without legal right, and yet who can say it is not wise that they have come, for they are running the railroads and developing towns and cities which are in the near future to be centers of industry.

What is true as to the value of the lands of the Chickasaw Nation is equally true of the land of the Kiowas, Comanches, and Wichitas, which adjoins on the westward. The pressure for the opening of these lands is almost equally great, but I very much hope that the work of surveying and allotting the land will not be forced, and that the work will be carefully guarded against such practices as obtained when the work was undertaken and carried out among their neighbors, the Cheyennes and Arapahoes. The Indians are still depending upon the rations issued by the Government, and will not do much in the way of self-support until forced to it.

The agent at Anadarko, Lieut. Maury Nichols, U. S. A., is a young man without experience in dealing with Indians, and who has a task upon his hands which might stagger a veteran in the service. He has 3,700 Indians, Kiowas, Comanches, and members of the affiliated tribes, at this critical time in their history, to guide and instruct. In three years the treaty under which they receive supplies expires; meantime the lands are being allotted, and the change which they have not sought is upon them with all that it implies. At this time little real work is being done; on issue days the custom still prevails of letting the steers loose upon the plains, and of chasing and shooting them; a weak reminder of the time when they chased and shot the buffalo which roamed these fertile lands.

School work is being prosecuted by the Indian Office and by religious societies with considerable success. Probably more than half of the children and youth of school age were enrolled in some school. Omitting the school of the Presbyterians (now very small because of the destruction by fire of their main building) there are eight others, of which four are Government reservation boarding schools, and the remainder missionary schools of different denominations. Fully 400 are enrolled in the said schools. The only one visited was the Riverside School, 2 miles from the agency across the Ouachita River, and located upon its beautiful banks. The school is overcrowded, having 65 scholars, who are Wichitas, Caddos, and from the affiliated tribes located hereabouts. Mr. George L. Pigg, the superintendent, has sent to the Commissioner plans with estimates for another building, to be used as a dormitory for girls; also estimates for the removal of the dwelling where the superintendent resides to a spot nearer the school. It seems desirable to enlarge accommodations here, as there is abundant room and sufficient scholars; the matter of the removal of the superintendent's residence is not important, but as it is inexpensive probably it would be well to do it.

I think I can truthfully say that the present school building, which is dormitory, schoolroom, etc., was in better order and condition than any ever before visited. The girls' sitting room was especially attractive. The matron seemed well adapted to the place. Two teachers are giving instruction in school. They ask for a kindergarten teacher. One hundred acres are under cultivation, the work being mostly done by the boys. The girls attend to the usual duties of such schools. Before leaving the agency I went through the warehouse to inspect the merchandise stored there. The first thing noticeable was the large pile of bacon, cut into pieces, weighing perhaps 2 pounds each, which were to be issued upon the following day in lieu of beef, supplies of which had run out under the old contract, and the new one had

not yet begun to operate; it was an unattractive sight, and the Indians have no fondness for it. Very little complaint was made with the quality of supplies furnished under contracts made by the Commissioner, none of sufficient importance to notice.

I had the pleasure of meeting Special Inspector Able, who had come to investigate the matter of the removal of an individual from the reservation by the agent. He was awaiting further instructions from Washington, as the man was back and he was informed the matter was compromised. It seems a peculiar way of proceeding, and so thought the inspector. The agent is finding more or less difficulties in his way, but he is young and inexperienced.

CHEYENNES AND ARAPAHOS, DARLINGTON, OKLA.

The impression prevails among the friends of the Indian in the East that the work of allotting the lands to these tribes was prematurely done, and has been attended by circumstances more or less unfortunate. It is thought that these people were not sufficiently advanced to be given their allotments and told to go to work; also, that signatures to the petition requesting it were not all genuine; that certain signatures were placed upon the paper by fraud, and that there was collusion between certain white men and certain Indians where money was used; also, that the price paid for the surplus land by the Government was far too low, considering its value. These are grave charges, but doubtless are true, and it is not surprising, therefore, that there has been great dissatisfaction on the part of the Indians.

One of the worst features about it is the fact that some of the most earnest men among the whites who were engaged in persuading the Indians to sign and who argued them to accept the nominal sum offered for the surplus land by the commissioners who acted for the Government were men who had been regarded as real friends of the Indians. Some of the Indians were overpersuaded by these supposed friends, and therefore signed. Not getting sufficient signatures in this way, other methods were adopted which were dishonest. It was thus the work was carried through. They were made the victims of a gigantic scheme, whereby they relinquished their surplus land for 40 cents per acre, accepting part in cash, while the remainder was invested and is in the keeping of the Treasury Department. But even in the cash payment there was another grievance; the sum of \$67,500 was held back and paid over to certain white men, who claimed that they were entitled to it as agents who had been employed by the Indians to get the transaction through. Preposterous as this may seem, it was carried out to the letter.

It is gratifying to learn that the agent now in control, Capt. Albert E. Woodson, U. S. A., is making a strong effort to get the latter wrong corrected. He is being aided by Captain Lee, who was formerly an agent here. I append a copy of an appeal made to President Cleveland and sent to him in February of this year. Captain Woodson is devoting himself with untiring assiduity to the service of these Indians and is endeavoring to make the best of the unfortunate circumstances and to correct the evils so far as possible. He is making a special effort to get them upon their allotments, but is not meeting with much success so far, as they are still living in camps, while the tribal relations are as strong as ever and their chiefs are exercising as much influence as heretofore. In answer to the question as to how many were living upon their allotments, the agent replied very few; in answer to the question as to how many were doing work upon their land, the agent said that perhaps two-thirds were doing more or less of such work. As the treaty under which they draw clothing and supplies expires in three years, the agent is laboring early and late to warn them to be ready against the time when their rations will be cut off.

Of course they have no house upon their allotment, no fence around their quarter section, no sod broken for tillage, except in an exceedingly small way; no horses heavy enough for such severe work, and usually no plow or other farm implements. Some are asking the agent for houses, but at this time the Government is not erecting houses for the Indians. Of farming tools, many have been given out during the treaty years, but they have been careless with them, and many have been stolen by their neighbors, the whites. Twice a month, when the supplies are issued, all the Indians go to the issue stations. This opportunity is embraced by characterless whites to seize upon such things as they need which are lying around; trees are cut for fence posts, plows are "borrowed" and seldom returned. In fact, the Indian, with his careless habits, is the prey to the more energetic neighbor. The agent filled my ears with recitals of the woes to which the poor red man is subject through these ways. In selecting land the Indian wisely chose plats near the springs of water or he took the wooded portion, leaving the dry and treeless parts for the homesteader. When the latter comes he preys upon his neighbor; he needs posts for a wire fence, which he sees he can secure from the land of the Indian, so he watches his opportunity to cut and haul the same. Sometimes this work is done at night and sometimes during the absence of the Indian at the issue station.

The agent is about to establish five new issue stations. There are now four; formerly there were three, so that the Indians will not have to go so far for their supplies; thus they will not be so long absent from their homes. He is also planning to open repair shops here and there. At present there is only one, and this one is at the agency, necessitating long journeys on the part of those who live at a distance, taking much time, just for some trifling and yet necessary repair. The agent has done a wise thing in subdividing what was once the reservation. He has made nine districts, over each of which he has placed a farmer whose business it is to look after and help the Indian. He desires to subdivide still further and appoint more farmers if the Commissioner approves. There is a well-organized Indian police, but the agent keeps many of the men out, as he will have no Indians loafing about the agency. I think I was never at an agency where I saw so few Indians hanging about in a listless manner; in fact there were none. We spent most of one afternoon in a conference with three prominent leaders among these tribes, Chief Young Whirlwind, Rising Elk, and Medicine Crazy, in discussing Captain Woodson's plan, which meets the approval of the Indian Office, for carrying out the "lands in severalty" law in fact as well as in theory.

Under the treaty whereby they accepted lands in severalty, each man, woman, and child received a quarter section, and also received from the proceeds of the sale to the Government of the remainder a cash payment. This cash payment was of little real value to the people, as it was unwisely used. Over and above this cash payment there was left \$1,000,000, which the Government holds, paying interest semiannually, and which brings them in a little ready money. The proposition is that the Indians petition Congress to pass an act permitting them to use a portion of this reserve fund for the erection of dwelling houses upon the allotted section which they chose for their homes, to fence the selected quarter section, in the breaking up of forty acres of land, in the purchase of cooking and farming utensils, in the purchase of a cow, hens, etc.

In other words, using a portion of their reserve in a practical way whereby they will have a house to live in when forced out of the camps and have some fruits of the soil growing for use when the rations cease. The details are not all given, but if the Indians will accept the plan and ask for it, and if Congress grants permission and Captain Woodson is here to carry it into execution, I sincerely believe that the question of landing the Indian in his own house upon his allotment and getting him at work will be solved so far as the Cheyennes and Arapahoes are concerned. The plan has many attractive features and was carefully discussed. It was received with reasonable attention.

The conferees were requested to talk it up among their neighbors, asking all to consider it and be ready for the calling of a large conference at an early day. I could not help thinking that if I were in their places, after having been deceived so many times, I would be very slow to accept any propositions from the white man.

It was with great satisfaction that I listened to a detailed statement of Captain Woodson's plan of issuing the live beeves and of the mode of slaughtering and dressing them for use. It is a thoroughly humane, proper, and businesslike way of doing the work, and so different from the old way of letting the animals loose upon the plain and shooting them as they formerly shot the buffalo. So notorious did it become that people flocked in upon issue days to witness the sight. They came in great numbers and from long distances; but it is all changed now. I visited the great warehouse and inspected the goods which come from the purchasing agencies with satisfaction, for I heard little complaint and saw little that points to fraud in fulfilling contracts.

The buildings and property at Darlington are kept in excellent order and Captain Woodson has improved the general appearance by painting fences and grading the roads, and in other ways, so that the village is very cleanly and presentable.

SEGER'S COLONY.

Seeger's colony, so called, is an exceedingly interesting feature in a visit to the Cheyennes and Arapahoes. The school, which is the central point and where John H. Seeger lives, is 60 miles or more southwesterly from the agency at Darlington, and is approached by carriage or by stage from Minco, on the Rock Island Railroad, driving fully 50 miles westward. My route was by stage in going; the return was made with the clerk, Mr. Davis, and Professor Meserve, using Mr. Seeger's team.

Mr. Seeger is a genius in the Indian service, small of stature, without the advantage of schools in his early days, yet possessed of characteristics which have made him a remarkable character in the work to which he has given nearly all of his life. A modest, unpretentious man, yet wherever he has been employed he has left an impress for good which has been lasting. The secret of his success is his unselfish life among the people for which he has lived. He has given himself unreservedly to them and won their confidence in a remarkable manner; except he had it, he never could have succeeded in the work he accomplished in drawing off from the agency and from about the reservation the restless and uneasy ones to a point he selected,

and there controlling them for a series of years. The work was undertaken the time when Captain Lee was the agent, and was done at his solicitation. Seger started with 150 Indians. They located in the region near where the school now is, which is situated on a beautiful grove called Seger's Glen, with its wonderful spring of delicious water.

The place was made one of the three issue stations and became an important center. From the 150 who came at first the "colony" has grown to 600; not that they are located in or around a common center, for such is not the fact, but those who live in the general neighborhood consider themselves as belonging to the so-called "colony." What has made it more of a center is the fact that Commissioner Morgan established a reservation boarding school here over which he made Mr. Seger superintendent. The edifice is of brick, which were made upon the premises; it is spacious and modern, and is located in the center of the glen. Sixty-five Indian children are here receiving instruction. The school is full, with no absentees, and accommodations are needed for more scholars.

Mr. Seger is very anxious for another building, as he is desirous of doubling the capacity of the school, there being about 140 children of school age in the "colony."

Seger never spares himself and takes hold of all kinds of work, working with his hands as well as with his head. He is planning to manage a large enterprise at small expense to the Government. He is eminently a practical man and studies to success in all lines. Everyone works, the staff, the teachers, the scholars, each in his own department, or out of his department if his services are wanted; they follow the example of their leader. The school was only opened January 11, 1893, and although the discipline is not as good as it might be, yet the children have made great progress, when it is considered that not one child could speak any English when they came less than a year and a half prior to our visit. Four full sections of land have been reserved for the school farm, of which already 120 acres are under cultivation. Great progress has been made in breaking up the land, clearing the grove from the underbrush, erecting buildings, and developing a watersystem. The spring whence the water comes is invaluable and is situated in a cleft near the house, from which it is elevated by a windmill to a tank and distributed over the grounds and through the buildings. In the wonderful glen are twenty or more varieties of trees, specimens of which were taken to the World's Fair last year. So far as possible the services of the Indians are used in all kinds of employment. Six are under pay as assistants in various capacities about the school, and all are making good records. Two were taken from camp where they had returned after their school days were over.

One had been four years in camp since leaving Haskell Institute; she and her sister, who was two years in camp after leaving school, are doing well as seamstresses.

It was a refutation of the charge that scholars who on their return home and again become what is called "blanket Indians" are never after good for anything. These girls were doing well, earning money, which they were saving and part of which Mr. Seger has invested for them in cows. It was delightful to see the existing harmony among the employees, who were interested beyond the money compensation in the success of the work committed to their care. Recently a new farmer came to supersede the one then at work; he remained a few days, looking over the field, taking note of what was being done. His conclusion was that he was not as well fitted for the place as the man whom he was to supersede; he therefore wrote to the Honorable Secretary of the Interior, through whom the appointment came, expressing thanks for the kind consideration shown, but declining the place and commending the man who was holding the position and so successfully doing the work. A strong and concerted effort was likewise being made to supplant Charles L. Davis, the efficient clerk. Probably the effort will not be successful. It would be an unfortunate thing for the work, as he is a man of versatile talents and the one person upon whom Mr. Seger depends. Professor Meserve, who was visiting the school in the interest of the Indian Rights Association, joined with myself in a letter to the Honorable Secretary, stating the facts and requesting that both the clerk and farmer be continued here.

ARAPAHOE SCHOOL.

Among the Cheyennes and Arapahoes are five schools: the Seger school, the Arapahoe school at the agency, the Cheyenne school, 3 miles away from the agency, the Mennonite school, likewise at the agency, and the Mennonite school at Cantonment. The scholars in attendance number 350.

Seger school	65
Arapahoe school	110
Cheyenne school	110
Mennonite at the agency	17
Mennonite at Cantonment, about	50
Total	352

The Cheyennes and Arapahoes number 3,300; of school age there are probably 700; in other words, the school accommodations are equal to about half what they should be. The Arapahoe school gave evidence of being under good management. Mr. J. W. Dwire, the superintendent, has been in charge four years. I visited and inspected the classes and was gratified at the recitations. I also visited and inspected the dormitories with satisfaction. The water supply is good.

This school, like nearly all I have visited, has paid little or no attention to methods of egress from the sleeping rooms in case of a conflagration. The main edifice of this place has been erected many years and is less modern than those more lately constructed; perhaps it was this fact and that the stairways were narrower than some, suggested the thought that more attention should be given this subject. One hundred and ten acres are under cultivation. Scholars do the customary work in the kitchen, sewing room, and upon the farm. The school was started in 1873-74. In its early years it was unsuccessful, except for short time in 1878-79 under the superintendence of Mr. Seger, and following him, Mr. Hutchinson. Recently it has become a good school. Scarce any absentees. As usual, Mr. Seger left his mark in various improvements, which were pointed out. The beautiful grove of cottonwood trees in the lawn upon which the buildings face, he started, though discouraged by nearly everyone. It is a worthy movement.

CHEYENNE SCHOOL.

The original school building is of wood and was erected under the supervision of Mr. Seger. The new, large building (boy's dormitory) is of brick, and was erected during the commissionership of General Morgan; the school site is upon a wooded ridge near the railroad track, and distant 3 miles from Darlington. Here is a spring of delicious water, which is carefully walled in and so kept that the water is not polluted in any way. So much is thought of it that all the drinking water used at Fort Reno, 4 miles or more away, is daily drawn from here. The superintendent, Thomas P. Ullom, and his corps of teachers, are all young, and all except one are civil-service appointments. Only the younger children were in the class rooms, as the school work was practically closed for the school year; the older ones were at work in the harvest field or in various capacities about the premises. In the school room of Miss Black a kindergarten and calisthenic exercise was going on, improving to voice and muscle; the young Indian children were being taught to speak out in full tones and in clear English, which was gratifying.

In the rooms of the seamstress the girls were preparing the material for rag carpets; great rolls were ready against the time for weaving to begin. Rag carpet seemed a feature in this school, as we noticed on our approach to the buildings several of the older boys hard at work shaking and cleaning them; afterwards rolling them up to be put away for the summer. Four hundred acres under cultivation, part being upon shares—the school is cultivating 205 acres. The superintendent spoke of the boys as being good workers. The superintendent spoke in unqualified terms of approbation of Paul Good Bear, the disciplinarian, an Indian who was educated at Carlisle. His influence over the boys is good in every way. He leads rather than drives them, and withal is a good worker on the farm, working with and inciting the boys.

MENNONITE SCHOOL.

This school is located at the agency, in a grove of cottonwood trees; good brick building, with an extensive garden; capable of accommodating 40, although but 17 were enrolled; a missionary enterprise, supported by the Mennonite Christians, but drawing certain rations and supplies from the Government, such as the children would be entitled to under the treaty were they living at home. The superintendent, Mr. A. S. Voth, is teacher and "all hands," and seemed a capable and worthy young man. He had seen service at the Cantonment school before coming here. The recitations of the scholars were creditable, and the place altogether was attractive, but why they have so small an attendance I could not understand, as there are so many children who ought to be in school. Possibly there may be some reason which was not divulged. The young man stated that more were expected during next school year. I was informed that the attendance has averaged small for several years.

CHILOCCO SCHOOL.

This is an industrial training school; scholars in attendance, 270; capacity since the addition of the new buildings, 350. Thoroughly equipped with efficient and experienced teachers, both in the school and in the industrial department, presided over by B. S. Coppock, superintendent. Situated in Oklahoma, immediately on the

Kansas line, 6 miles south from Arkansas City, Kans. In the reservation are thirteen and a half sections (8,640 acres) of as choice farming land as is often seen, nearly all of which is available for cultivation.

There is under cultivation about one section (640 acres); the remainder is used for hay-cutting, grazing, etc. Farming is done upon an extensive scale; 100 acres are in corn, 100 in wheat, and 200 in oats. The great kitchen garden for the use of the school is luxuriant in its growth of nearly every vegetable for the table known in the latitude. The orchard of peach trees presented an appearance of healthfulness and thrift.

Apple, apricot, nectarine, pear, and other young trees were coming forward and will soon yield abundant fruit. The soil is kept so well tilled that in these nurseries scarce a weed was to be seen.

The superintendent informed me that one object he has in mind in developing these nurseries is to have plenty of young fruit trees of the choicest varieties for the farms of the scholars when they make their homes upon their allotments. The work upon the farm is largely done by the boys under the supervision of the farmer; they are good workers and were seen in all directions, handling the plow, harvesting the wheat, pulling weeds in the garden, gathering vegetables for the table, milking the cows, or at some other employment. The smaller boys were in the class rooms.

The buildings are upon a grand scale, something unequaled in appliances for the work for which they were constructed. The material used in building the fine edifices is a light-colored stone which is quarried upon the farm; it makes a beautiful structure, and the architecture of the two which were completed a year ago and which have been in use meantime, is of a high order. The internal arrangement of the girl's building is as nearly perfect as human experience has devised or conceived. The building containing class-rooms, with the superb auditorium on the upper floor, is a model in every respect. The building in which is the great kitchen and dining room is also a model in its way—clean, spacious, well ventilated and comfortable.

The stable for the horses, as well as the immense barn for hay and for the cattle, are upon a grand scale; not so expensive, but large and convenient. Everything is planned for an extensive work, and yet when I got the figures as the cost of the structures recently finished they seemed small to one familiar with the cost of putting up large and fine buildings in the East. Much attention has been given to sanitation, so that the health of scholars, teachers, and employees ought to be good; this work is not yet completed, however. One feature of the plan consists of a furnace with a large and tall chimney, where is burned the refuse, etc., of the establishment. The building used for hospital purposes is a marked exception to the others; it is an old, low, frame structure, inferior and ill adapted to the purpose for which it is used. Requisition has gone to Washington for a new edifice, which I hope may be granted. Only a few days prior to our visit the tall chimney connected with the kitchen was struck by lightning and a good deal shattered. Masons were running up a staging preparatory to a careful examination to see if it could be repaired or if it must come down. Fortunately, though shattered and apparently split, it did not fall; had it fallen it would have crushed the kitchen roof and might have fallen upon the hospital, which is quite near.

Great preparations were in progress for the closing exercises of the school, which were to occur within a few days. The handiwork of the girls as exhibited in the triumph of combination in lace and satin, for graduation gowns, was worthy their white sisters; and the work was all their own. We saw nothing of class exercises, but the art specimens exhibited, the work of the scholars, was superior.

Work and progress are the watchwords here, and withal there is a moral side; there is so much of religious and Christian influence that a branch Young Men's and a branch Young Women's Christian Association are maintained.

CONCLUSIONS.

Several features impressed themselves upon my mind which were gratifying. Increased efficiency in the schools I mention first, a higher grade of teachers as a whole, better attendance on the part of the scholars, greater regularity, and less absenteeism. Most schools visited were filled to their limit, and some were overcrowded. I visited no school where the scholars seemed to be unhappy or discontented. I found very little sickness, and only one who was seriously so, and yet she was with her mates at the supper table, but was suffering from pulmonary trouble. More of the children were learning to work on the farm, and there was improvement in that work.

The tribes visited this summer had had less intercourse with the whites, so that the scholars were mostly full-bloods and were freer from the evils which contact with low whites imparts. Much can be said in favor of civil-service appointments, and

I am more and more satisfied with the working of the law, and advocate its further extension. This is the result of observation, for I have come gradually and through experience to favor its application in the school service. One superintendent whom I met, a civil-service man, was successful as a teacher, but a poor manager of the farm. Such cases occur, but I am satisfied that much of the improvement is owing to the toning up of the service, and the civil-service law and rules have done much to this end.

Very respectfully,

DARWIN R. JAMES,
United States Board of Indian Commissioners.

Hon. MERRILL S. GATES,
President of United States Board of Indian Commissioners.
BROOKLYN, N. Y., August 23, 1894.

APPENDIX.

Hosteen Deete Sahghy said:

"We started from Gallup, N. Mex., and it took us three nights to go to Chicago. The agent wanted us to see the Americans and to see how they live. The place where the Fair was is fenced on one side, and on the other is a lake; one side there are houses, big houses, all fenced in. The white people's and Indians' world is round, and people live all over, east, west, south, and north. Indians don't believe the world is moving; but the white people showed how it moves, and they showed the Indians how to live, and everything. 'Way back, when the white people commenced to live, they lived like the Navajoes; now they show the Navajoes how to live. It took four years to collect all the things at the World's Fair. We saw all different kinds of shoes and hats, etc., from all different parts of the world; all other goods, and things brought from everywhere.

"It was like sweeping together all these things and all the people at the Fair from all the world. It might take some by steam to cross the ocean three months. Navajoes were brought for the whites to see and to see the whites. We saw machinery that made cloth. It used to be made by hand, now all made by machinery, and that is what they want Indians to see; and the locomotive and cars that were first made not long ago, not one hundred years yet. There was an old can and they stopped it up and saw how to make an engine; that the steam was strong. Different kinds of calico were gathered there, and old axes and new. Now they eat different kinds of food; way back they did not eat good food. Away back they used to cut trees for wagon wheels; now they make them different. Away back they used to have log huts; now they have good houses, and steamboats that run along on the water, and big cannon to shoot off on the water.

"The boats were there like which men had when they discovered this country. White man said there might be more land. That ship went back across the ocean and told the people more land here, and more came across. Mexicans at first came over. 'Way back the ships used to go by sail and wind; now they go by steam. We saw lots of white people's guns. 'Way back they did not have good guns; now they have good ones. Light used to be from lard or grease, and then oil; now it's electric lights. The white man caught the lightning and found out how to make electric lights. We saw different kinds of hoes and plows and shovels—all things to work with. To know how to read and write does good, for they can think more; they can see more; they see better with eyes. It is better to read and write than to be strong. We saw everything gathered from all over the world. Lots of white people going back and forth, and they been doing that all summer. It is time to let up now."

Peshoki spoke as follows:

"We thought when we got back we could tell the children what we saw at the Fair. That is what the agent took us there for. When we started from home we saw farms all the way. They are farming all the time back there. They don't lay around in the sun; they work all the time. There lots of white people work all the time for a living. The Indians looked to see how it is done; how the white people do the work. We seen for all the Navajoes. If you don't believe it, it is all right.

"The Navajo does not keep track of the days and nights like the white man. He don't think.

"Back there the wheat is all planted and green (autumn wheat) and the corn is gathered nice. That is the way it is back East. You can think about it. I never dreamed of what I saw there. Now I have seen it. Coming back I never slept for thinking of it.

"You should let your children go to school to learn to read and write. They don't read and write much, but better leave the children in school. No difference how much you love them, better let them go to school. Look back how the whites

used to live. 'Way back learned to do better. Better have them go to school and learn to do all kinds of work. Some of the Navajoes said when we went away we were not coming back. It took six days to go and come. We came back; we did not go there to live. White people looked at us all the time. We went to see two big white headmen. They were glad to see us.

"We did not get money from Washington to go. Got the money from other men. The agent worked all summer to get money to go. Just enough to go to Chicago, not to go to Washington. Saw lots of white people. More than ants, when you shovel out a hole where ants are. Two schoolboys went, so they can tell each other."

Hosteen Bagota said:

"I want the people to send their children to school to learn to read and write. The old people will think the same way. I want the boys to learn to read and write, so they can deal with the white man. I am glad we went to the Fair. I never knew how the white people lived until I saw it. Never thought about it. When we saw a car, did not know how it was made. Never thought about it. Do not know if the schoolboys could make an engine; might when they get older and learn.

"I have wished a thousand times since I came back that I was a boy, so I could put myself in school. I have put two children in, and a neighbor has put one in.

"The headmen were ashamed of their hogans after seeing the houses the white men lived in.

"I have told the people that after we traveled a night and a day the white people were taking care of the earth all the way. Look at our country; we ought to be ashamed of it. Look at the difference.

"We were treated well; the white men did not push us, or crowd us, or swear at us. If we die out in our country the flies and worms see us; if we die in the white man's country lots of people see us. When we saw a picture of a coyote killing a lamb old chief said he was bad, ought to be ashamed of himself; he could do that back on the reservation but ought to be ashamed to do it here.

"The white people are like ants, industrious, working all the time; they are thick, coming and going all the time. Before, we thought the agent told lie when he told us how many white people there are. All believe now because so many of us saw. So many headmen (chiefs) saw. Now the people came and went to hear all about it. Formerly they paid no attention.

"Hosteen Nez used to say anything told was a lie. When he got to Chicago he liked to have ten fits.

"The headmen see that it is the head and the hands that do the work, mostly the head.

"To see the progress of the white man, like the corn growing from the seed, fast in one season. Old things are like the seed. From the old to the new is like from the carita [Mexican cart with wheels of solid wood] to a Studebaker wagon.

"We saw nice trains on the road, but a fine one at the Fair. Indians not fit to ride in it. It seems that other tribes are ahead of the Navajoes. When I saw the big guns I told the medicine men what did they mean by telling the young men they could protect the Navajoes against all the whites. Two white men with one of these guns could whip all the Navajo tribe. Out here we make fun of the Americans on the horse. Americans East can do anything on the horse.

"I was asked by an ignorant Indian from Cotton Weed Wash if there were more white men than Navajoes. I showed him the dust and grass, and told him I could just as soon try to count them as to count the white people; that he lived on the water as well as on the land. Then he sat down and wanted me to tell him all I saw. I told him I could not if I talked till I was gray."

APPEAL.

To our Great Father at Washington, the President of the United States:

We appeal to you to help us. We believe you have an interest in our affairs and that you will listen to our grievances. We have no one to plead our cause for us, and we therefore come to you, our Great Father, trusting in the kindly and generous disposition you have always shown toward your red children.

We want to tell you that we have parted with the greater part of our lands to the Government in order to make homes for our white brothers, who are now living in peace and harmony with us as their neighbors. We sold these lands to some white men whom the Great Father (your predecessor) sent to us to treat with us, who were known as the Cherokee Commission.

They were not men of generous spirit and did not exercise the proper regard for our rights that they should have done. They were not liberal with us but drove a close bargain with us and cut down the price to be paid to the small sum of 40 cents per acre. We held out for a bigger price for a long time, but they finally threatened

us if we did not accept their terms the Government would take our lands away and we would get nothing but what it chose to give us.

They promised us \$1,500,000 for our surplus lands, but it has not been paid us according to our contract. A large part of this sum was withheld from us and paid out to a company of attorneys that we never employed; and although we loudly protested against this payment, and our friends did the same for us, yet nevertheless the money was paid out and our people have been compelled to bear the loss.

We want to tell our Great Father that the Interior Department allowed this outrage to be put upon us by approving a contract that a few of our people who were influenced by the promise of reward and who were in the pay of the attorneys had signed, falsely representing themselves to be our authorized agents, when, in fact, they were the paid employees of these attorneys. (See affidavit of parties to this contract, hereto appended as Exhibit A.) It is proper that you should know that our agent, in order to make this contract binding on us as tribes and give it a legal effect, did append his certificate to the effect that the contract was made by representatives of a majority of all the Indians, and that they were selected at a full council of the representatives of the two tribes, and was free and voluntary on their part, when, in fact, the parties to this contract on the part of the Indians were selected by the agent and one of the attorneys, as will be seen in evidence, and did not therefore represent anything like the majority of our people, not even as much as one-fourth of them. We offer in evidence Appendix B, showing that this so-called contract was never read or interpreted to the parties who signed the same on the part of the two tribes, and that they did not know its contents when they signed it.

These so-called representatives were promised many things of value if they would sign the contract with these attorneys. The interpreters employed were in the pay of the attorneys; one of them has sworn that he was promised \$10,000 if the deal was consummated and the attorneys received any money; but in the end they only paid him \$500. The others were paid from \$100 to \$200, while others still were promised pay, but did not get it.

Our Great Father, we ask you to read the report of Prof. C. C. Painter, of the Indian Rights Association, published in pamphlet form March, 1893, concerning this so-called contract. He made a full investigation into all the circumstances connected with this fraudulent contract. We also invite attention to the papers and correspondence published in Senate Ex. Doc. No. 18, Fifty-second Congress, second session, in compliance with Senate resolution of June 1, 1892, pages 1 to 51 and 201 to 247, touching the matter of contract of certain attorneys with the Cheyennes and Arapahoes. It contains the report of Capt. J. M. Lee, U. S. A., transmitted to the War Department by Maj. Gen. Nelson A. Miles, U. S. A., commanding the Department of the Missouri. Also copy of charges preferred against these attorneys by Captain Lee, all of which are heartily indorsed by us.

We wish to add that our people as tribes did not assert any right or title whatever to the treaty reservation in the Cherokee Outlet. We had not been allowed to live there, and had never lived there; but had been in peaceful occupation of the Executive order reservation for more than twenty years, and our rights to this land had been recognized by the Government in every official reference thereto.

The Interior Department did not recognize that we had a title to the treaty reservation in the Cherokee Outlet, and until these attorneys suggested it, our people had never given it a thought.

Our Great Father, we have not space in this paper to give you all the facts in this case, but we are prepared to prove beyond the possibility of successful contradiction, that fraud, collusion, deceit, and trickery have been practiced on us, and to the end that all the facts and evidence may be brought to light, we earnestly pray and beg that you will ask the Congress now in session to appoint a committee to investigate this whole matter. This will give us an opportunity to be heard in our defense, and to show how grossly we have been wronged.

Our Great Father, we pray that you will listen to us and not close your ears to our petition; if we have been wronged and unjustly treated you should help us to make known our wrongs. The truth will injure no one, and we only ask the whole truth to be made public. Therefore, our Great Father, send us a committee of the great council at Washington to inquire into this whole matter; and we, your red children, now striving hard to make a living like our white brothers, will ever pray.

Names of signers, also affidavits, omitted.

REPORT OF C. C. PAINTER.

WASHINGTON, D. C., *January 10, 1895.*

SIR: In accordance with your request I attended the Teachers' Institute at St. Paul.

A series of institutes for Indian teachers were held during the summer under the management of Superintendent Hailman, as follows: At Chilocco; Santa Fe; Salem,

Oreg.; Fort Shaw, and St. Paul. These were quite largely attended, and were of very great interest and profit, if all may be judged by the last one held at St. Paul. About one hundred and forty teachers, superintendents, matrons, etc., were present at this last, paying their own expenses, but sufficiently interested to remain almost a week.

A few facts observed seem sufficiently noteworthy to find a place in this report:

(1) The eminent fitness of Superintendent Hailman for the position he holds, and the immense need that his position shall be made permanent, and its powers so enlarged that he shall, without party annoyance or cramping restrictions, be able to do the proper work of his office.

(2) The manifest improvement of the teaching force since the schools have been put under the civil-service reform regulations. It is safe to say that a large majority of a like assemblage, a few years since, would have been without the gleam of an idea as to what Dr. Hailman was talking about, as he explained and illustrated principles of pedagogy. He would have been to them a blank fool, and they to him, as to most others, utter barbarians. Now, there was mutual understanding, sympathy, and helpfulness, for by an exchange of ideas the superintendent gets a broader view of what is peculiar in this work, while they carry away new ideas as to methods, and a greater inspiration in seeking for results.

(3) This conference of teachers from various reservations, from various grades of schools, from the day school, to the distant and fully equipped nonreservation industrial boarding school, begat, evidently, as the sessions progressed, a sense of unity in the school work. Missionary teacher and Government teacher, Catholic and Protestant; superintendent in charge of schools, numbering hundreds; isolated teachers of twenty from an Indian camp, came in touch with each other, got ideas from each, felt inspiration from each, learned to honor each, and parted, feeling that they were collaborators in one common and noble work.

There was manifest, early in the conference, a decided jealousy on the part of the reservation schools—Government and mission—of the nonreservation schools, and a feeling that they were perhaps held in contempt by them. It was asserted that these schools came in and robbed them of their best pupils, and yet did no higher work than they were doing at home with better results, so far as the home and the future stability of the student are concerned. There was also a manifest decadence of this feeling as the discussion continued, from day to day, and it can be confidently asserted that a repetition of such gatherings, with greater permanence in its membership, would eradicate this feeling, so prejudicial to the best results.

(4) Until this school work has been continued long enough for a grading of these various schools strictly as to studies pursued in them, it should be held that the day school has accomplished its highest and best result when it has gained the consent of parent and child that it shall go to the reservation boarding school; and the teacher's success be measured by his ability to do this. And the reservation school should be considered successful in proportion as it can bring forward willing candidates for the distant schools, looking to the day schools in turn to make its losses good.

(5) One's conviction grew stronger all the while, as one listened and observed, that the reservation schools throw too much emphasis, consciously or unconsciously, upon the reservation and tribal idea, and do not educate either children or parents away from it; also, that the nonreservation school has this advantage, that children from various tribes who are gathered in it get more of the idea that they are not simply Apaches, or Comanches, or even Indians, with tribal traditions to cherish and reservation homes to perpetuate with the life which this idea almost necessarily begets, but they are a part of the human family and of the citizenship of this great country, and that their thinking and living is to be adjusted to this larger idea.

(6) That the failure of partially educated Indians, especially those from Eastern schools—the others are not, in most cases, sufficiently differentiated by dress, language, or manner of life from the uneducated to render a failure noticeable—is due to the fact that they have found in their education and its circumstances a certain adjustment to the decencies and comforts of civilized life, and a relish for them as they exist, but when thrown back into conditions in which these are not found they know not how to create them.

The question for us to answer is whether education is to be given where the conditions to be dealt with exist, and shall have reference to a change of these as its results, or whether it shall be given where it will be largely an adjustment to those which will no longer exist for the pupils after they return home, except so far as there may be developed strength on their part to create them. The conviction, as one listened to what was said, was that the reservation school tends to perpetuate the reservation and tribal idea, while the nonreservation school adjusts the pupil to comforts and decencies, and gives him a taste for them, but does not to any great extent give the ability to create these for himself.

We should not be content to ask which of these is the better, but rather what is best. This, perhaps, has not been found.

SHAWNEES AND POTTAWATOMIES.

Attention has been called to a provision in the last appropriation bill for the expense of the Indian service, authorizing the Shawnees and Pottawatomies of Oklahoma to sell all their land, recently allotted to them, in excess of 80 acres, except that those not residing in Oklahoma may sell their entire allotments. Information came from certain educated Indians who had labored for years to persuade these tribes to consent to take their land in severalty, that the Indians were made to believe that it was the wish and purpose of the Government that they should sell—in fact, that the law compelled them to sell; that unscrupulous white men were using all means to rob them of their lands; especially that they were subsidizing the liquor saloons of Tecumseh, and other towns, to this end, and that many contracts had been made, and recorded, even before sales were authorized under the law.

In response to the urgent solicitation of these young men, and the request of the Board of Indian Commissioners, I visited these Indians in November last, hoping to give them some encouragement and aid in their fight for their people. Before they were authorized to sell, many, if not most of the Indians, had already leased their allotments; immediately after Congress authorized sales, and before the honorable Secretary had issued rules regulating such sales, many contracts had been made.

A few cases, both of leases and sales, will give a correct idea of the equities observed in these transactions.

J. W. Moyle leased 240 acres of children's land from John Spybuck for five years, for improvements. These are, a three-strand wire inclosing fence, a house, stable, and well. This land is about one-half mile from Tecumseh, and of a most excellent quality. The house is a box house, about 14 by 18 feet, of native lumber, no chimney; the stable, of same material, about 10 by 12 or 14 feet, covered with straw. House and barn worth probably \$45 or \$50.

J. W. Leach leased of Frank Shinces 160 acres smooth prairie, 1 mile from town, for five years. He is to break 80 acres, build house 14 by 18, and stable, dig well, inclose with three-strand wire fence.

James Malone leased of Charles and Mary Starr and children, 640 acres of magnificent upland for eight years, for 25 cents per acre per annum. He is to fence and break what he can. Lease runs from 1892 to 1900.

John Barone and wife, Jennie, leased quarter section of land, half mile from town, five years, for improvements. These are one small log house, no value to speak of, box house worth \$25 or \$30, a little straw-covered stable.

Ben Bull-frog leased to P. E. Britton, for five years, 68 acres belonging to Lizzie Samson, for one-third of all grain, and one-fourth of all cotton raised. Ben is the self-appointed guardian of Lizzie, who does not live with him, nor is she in any way cared for by him.

Shawnee go leased to George W. Blevins, 200 acres for five years for \$300 per annum. Of this land 120 acres were under cultivation and 80 acres of pasture. There were on it, built by the Indians, a double house, well, cribs, corral, and orchard of 200 trees in bearing. The Indian is in the Creek country, driven out by the tax collector, who attempted to collect \$300 tax on his cattle.

Bolestha Hood (called Peter) leased to Mr. Crossley, for three years, 120 acres for \$375. This was an improved farm, good hewn log house, bearing orchard, well, and 50 acres under cultivation. This is excellent land.

Martin Starr leased 120 acres of bottom land to J. A. Cole for five years. The consideration was to be an orchard planted at once; a house of oak or cottonwood, and wire fence. He has built a box house 16 by 18, no chimney, and so far failed to plant orchard. Starr has been offered \$20 per acre for this land, and it is said that Cole had sold his lease for \$1,000 to George Brown.

Many other cases of like character came to my knowledge.

The value of the committee—of intelligent Indians, of which Thomas W. Alford, John C. King, and Walter Shawnee are the principal men, as a protection to the Indians, whose approval must be given to such contracts before they are sent in by the agent for approval by the Secretary—appears from the fact that the ruling prices for bottom land before their appointment ran from about \$2.70 to \$4 per acre. The same class of land now sells from \$20 to \$25 per acre. The value of education to these Indians is seen, to an extent at least, when it is learned that these young men are graduates, two of them of Hampton, and one, Shawnee, of Lawrence. Alford, a half-breed, and King, a full-blood, ran away some twelve years since, and made their way to Hampton. Alford is a surveyor, and has done a great deal of work for the Government on his own and the Kickapoo Reservations, in the allotment of land. King is a merchant in Tecumseh, and carries a stock of some \$3,000 or \$3,500 worth of general merchandise. Shawnee is a very competent harnessmaker. They are not only doing well for themselves, but a noble work for their people.

Alford and King illustrate the wisdom of a remark made to me by a Winnebago

graduate of Carlisle, who ran away from his parents, they being bitterly opposed to his going, and went to that school. When he returned home he built his father a house (he learned the trade of carpenter), broke up land for cultivation, and put his parents far along the road toward civilization. When the next son was old enough to go to school, his father said he must go. This young man said: "The Government ought not to wait for the consent of the child's parents, but should send him to school. They are ignorant and do not know anything about the value of an education."

These men now stand as a wall of protection for their own people. They are not cheated by the whites; are not arrested on trumped-up charges, and have a standing in the community in which they live as men, illustrating the fact that education is the solution of our so-called Indian problem.

CHEYENNES AND ARAPAHOES.

The visitor to the Cheyenne and Arapahoe Agency, who has been acquainted with the conditions prevailing for the past eight years, or since Captain Lee gave up the control of these Indians, recognizes at once a most wholesome change in the atmosphere surrounding it. A general appearance of repair, thrift, and tidiness prevails, where there was decadence and dilapidation. The hosts of loafers, Indian and white, have largely disappeared, and one feels that a tonic ozone of energy impregnates the air which for years has been loaded with a suffocating miasma of indolence.

The Government schools are full to overflowing, and the mission school, which had been deemed about dead two years since, is once more full of promise.

Much of Captain Woodson's time is necessarily given to the almost hopeless effort of protecting his Indians against the determined purposes of whites to prevent their peaceable occupation of their land.

Brutal murders have been committed by cowboys, the undoubted purpose of which is to force the Indians to assail their white neighbors, and prevent others from coming in to occupy lands on which they are now herding cattle.

The agent is giving very earnest consideration to the question of settling the Indians upon their allotments, and making such use of them that they will, as speedily as possible, become self-supporting. Their annuities cease, under their treaty, after three years. The scheme which he has proposed, and which strikes me as wise, is this:

Assuming that three-fourths of the allotted land belongs to minors, and one-fourth to the heads of families, he proposes that three-fourths of this land should be leased for a series of years to white men who shall be obligated to bring the land under cultivation, and to make permanent improvements, and so put it in proper condition for these children when they reach their majority; that the Government shall advance from their permanent fund a sufficient sum of money to make like improvements upon the remaining one-fourth part of the allotments, which the allottee will be induced to cultivate for himself. With perfect supervision by an agent who recognizes the fact that he is agent for the Indians, and not for the white man, and who will rigidly enforce the obligations of such leases, this scheme seems entirely practicable. Incidentally this would necessitate, if the leases run for a series of years, say five, as it would seem wise they should, the introduction of the common school system, the building of district school houses for the benefit of white children; it would necessitate the making and keeping in repair of roads for the accommodation of the whites, and a proportionate share of these expenses ought to be provided for in the leases.

It would seem altogether feasible that the amount of money advanced from the funds of the Indians could also be made good from the fifth year's rent of these lands, so that they would suffer no permanent diminution. The figures given by the agent seem to make clear that this plan could be carried out successfully. Certainly some plan must be adopted.

The wisdom of selecting army officers for the position of Indian agent, whatever may be true at other points, seems to be justified by results at the Cheyenne and Arapahoe Reservation.

APACHE PRISONERS.

The sudden disposition made by the President and his Cabinet of the Apache prisoners, in removing them from Mount Vernon Barracks to the Fort Sill Military Reservation, was a very great surprise to many, especially as it seems to have been promoted by certain army officers who protested against it a few years ago. It is to be regretted that no preparation was made for their reception at Fort Sill; that they were dumped unprotected upon this land so near the beginning of winter. It is a matter for congratulation that they are put under the care of Lieutenant Scott, who is a very enthusiastic and ardent believer in the possibilities of Indian civilization; a man of unlimited energy and good sense.

It was a bleak, raw day when I visited their camp, and many of them were looking back regretfully to the comfortable houses they had built and occupied with so much pride at Mount Vernon. They were protecting themselves as best they could in brush and cloth tepees. It is to be hoped that this recurrent plunge into tepee life may not have a demoralizing effect upon them.

The War Department had turned over to Lieutenant Scott 50 mules, harnesses, wagons, and varied material from Fort Supply, which had just been abandoned. A detail of the men were engaged in cutting trees for their picket houses, and the work was being pushed with energy. Provoking delays had occurred because of what seems somewhat hesitating cooperation of the commissary department in Washington, but the obstacles were disappearing, and the lieutenant was quite hopeful of all the support necessary. His plan is to establish them for the present in a somewhat compact village, select lands on which they are to be, as he hopes, permanently located for cultivation the coming season, and gradually, as an Indian is ready, move him out upon it and build for him a permanent house.

The question of a school for the fifty-odd children who were in the school at Mount Vernon was giving him some anxiety; there was no room for them in the school at Fort Sill nor in the Kiowa or Wichita schools. The probabilities seemed that he would make a contract with the father in charge of the Catholic mission school near Anadarko. It seems unfortunate that the ladies who had charge of them at Mount Vernon could not, or at least did not, accompany them to their new home, for they were doing admirable work. It is encouraging to know that after all these years of wasteful delay in disposing of them, and of inexcusable injustice to those who were wrongly classed with and treated as hostiles, though possessed of certificates of good conduct and faithful service as scouts, they are at last to have a home.

KIOWAS AND COMANCHES.

Captain Baldwin, the officer last detailed as agent for the Kiowas and Comanches, reached his agency the morning of the same day on which I arrived. Job said, in his great patience, that he would await all his appointed days until his change came. Had he been agent for the Kiowas and Comanches his delay probably would not have been long, for the changes here have come with great rapidity; too great for any continuity of work, and, of course, for any hopeful results of work on the part of any agent however good or wise he may be. This is not intimating at all that changes there have not been wise, considering the character of some of the appointments.

The future of these Indians depends largely upon what action may be taken with reference to the approval or nonapproval of the recent agreement made with them by the Cherokee commissioners. That they were defrauded outrageously in this agreement is certain. That they were greatly deceived by the commissioners, they assert, and the state of mind in which they were left after their negotiations was not a hopeful one. It is to be hoped the expressed determination of the Secretary of the Interior to hold this land for the Indians, if allowed by Congress to do so, will be carried out, and thus the experiment will be made under wise supervision, whether they can not be made self-supporting upon it.

The appointment of Captain Baldwin as agent was regarded by army officers who are friends of the Indians as being a wise one. Of course there was no opportunity to form an opinion in regard to this, as he was not in possession of the agency.

INDIAN SCHOOLS.

A visit to the Ponca, Shawnee, Arapahoe, Cheyenne, Comanche, Kiowa, and Wichita schools, allowing opportunity for comparison with observations made from time to time during the past six or eight years, affords ground for congratulation. These schools are all full; there has been a very marked elevation in the character of the employees in charge, and abundant evidence that great progress has been made, especially in the last two years, in educational work. There are yet many things that are open to criticism, but advance has been so marked and so gratifying that criticism is almost silenced. Positions in these schools which are not under civil service, it must, however, be said, are weak points, and the objective points at which the politician still aims. These are openings through which, to a greater or less extent, disturbing influences still find their way. There is good ground for hope that still greater progress will be made when the working of a reformed service is less hampered by traditions of the past, or by hope for its overthrow and defeat.

Many of these schoolhouses and dormitories are deficient and badly constructed, and school must always be carried on under some difficulties. For instance, the reported capacity of the Comanche school is 155. There is not room in the dormitories to decently care for more than half that number, and the rooms are literally packed with beds in which two or three children, and in case of larger beds perhaps more, sleep.

Comparisons are tedious, perhaps, but the work of the matron at the Wichita school is so far in advance of anything I have ever seen in any Indian school it should have special commendation. Not only was everything "spick and span clean," whatever that may mean, but pains and good taste had been used to the utmost of available material to make the dormitories pleasant. One could not but feel that a subtle but potent element of refinement here entered into our civilizing effort, which has been hitherto sadly wanting, except in the most advanced of the nonreservation schools.

Very respectfully,

C. C. PAINTER.

Hon. MERRILL E. GATES, *Chairman*.

The expenditures by religious societies during the last year for Indian missions and education (not including special gifts to Carlisle, Hampton, and other schools) are as follows:

American Missionary Association (Congregational)	\$43,546.69
Baptist Home Mission Society	13,644.21
Bureau of Catholic Missions	50,000.00
Friends (Orthodox)	6,990.71
Mennonite Mission Board	10,195.33
Methodist Episcopal Missionary Society	8,576.00
Methodist Episcopal Missionary Society, South	17,498.00
Moravian Missions	9,676.09
Presbyterian Home Mission Board	185,805.00
Presbyterian Home Mission Board, South	10,330.00
Protestant Episcopal Missionary Society	59,835.32
Unitarian Mission Board	5,000.00
Women's National Indian Association	26,183.69
Indian Rights Association	7,000.00

JOURNAL OF THE TWENTY-FOURTH ANNUAL CONFERENCE OF THE UNITED STATES BOARD OF INDIAN COMMISSIONERS WITH REPRESENTATIVES OF MISSIONARY BOARDS AND INDIAN RIGHTS ASSOCIATIONS.

The conference met at the Ebbitt House, Washington, January 16, 1895, at 10 a. m., President Gates in the chair.

Prayer was offered by the Rev. Herbert B. Turner, chaplain of the Hampton Institute.

President GATES: On Saturday last our honored friend, Prof. C. C. Painter, was deeply engrossed, as he has been for years, in plans and work for the cause which brings us together. On Sunday morning he found himself not quite well, yet he arose, not anticipating any serious illness, nor did his friends feel alarmed; but before the close of the day he had passed on into the larger life—as our Friends are accustomed to say, “from works to rewards.”

We can not escape a sense of especial sadness at this meeting as we come together at the open grave of one who, for several years, has been most active here at Washington, and upon whom our honored Secretary had learned to rely as upon a younger brother. They two guarded the interests of the Indian here in Washington at many threatened points. We can not, I say, escape a feeling of especial sadness, his death coming so immediately before our own meeting and at a time when he largely held the threads of these different lines of work in his hands. No one has yet been able to gather up all the lines of effort which he held when he so suddenly fell in his place at his work.

At a later hour we shall wish to speak more fully of Professor Painter, and of what he has accomplished for the Indians.

It is but a few weeks since another, whose counsel was always most valuable at our conferences, was as suddenly taken from us. No one who ever met President Rhoads, of Bryn Mawr, can have failed to be impressed by the singleness of his purpose, his absolute kindness, his utter unselfishness and guilelessness, and the power of his noble character. And yet, when he took hold of a matter which required practical judgment and penetration, he gave evidence that the wisdom which cometh down from above makes earthly plans prosper too, when applied to their conduct, and is more than a match for selfish, sinful scheming. He was a most valued adviser and friend.

President Rhoads had left his home to go to Philadelphia, and had taken his seat in the railway station to wait for a train that was to take him to attend a lecture on sociology, the first of a course by his friend the Rev. Dr. George D. Boardman. As he sat waiting for his train, his head was seen to fall quietly forward, and in a moment he had breathed his last.

We can not enter upon our conference without referring to these friends of such long standing, of such unselfish devotion to this work. We can not look forward without missing them. But sorrow is not to be the keynote of our meeting. Our work is unfinished. Their memory incites us to go forward with it, hopefully.

There has never been a year since I have been connected with this work when there was more promise and more need of careful supervision and devotion than now. But instead of attempting to outline the present condition of the work, or my own thought of it, I shall ask you to pass with me at once to the principal object of this conference—the securing from the representatives of our various religious bodies a report of the facts at their schools and missions, and of the tendency of their work. Special interest attaches to these reports at this time, because of the severance between the contract schools and the Government, when we think what this severance means.

Shall it mean that by a narrow economy on the part of the Government every dollar so withdrawn shall be covered into the Treasury; or shall it mean that the money no longer appropriated for these contract schools, with an additional sum, shall be used to establish a full and adequate system of primary, secondary, and higher education open to Indian children and youth, until Indian schools shall be merged in the general public-school system of the land? The religious denominations, in withdrawing from the contract system, do not mean that they give up their interest in the Indian. Shall we, as Christian workers and lovers of our fellow-men, let the surrender of Government aid mean a diminution of interest in the Indians? Shall we allow ourselves to be drawn into this view of the case that, since Government has withdrawn its aid, Christians may draw back from Christian missionary

and educational work? I think we shall look with great interest to the reports that are made this year, and to the work of the denominations in the coming year, as indications of the future attitude of the religious societies toward the Indians. Never was there such a demand for the power of the gospel of Christ as to-day.

Those who have had children know that during the transitional period from boyhood to manhood young people must be guarded by parents until they are accustomed to manage their own affairs; and all thoughtful persons understand that in the progress of a people from savagery to Christian citizenship there comes such a period, when to help them to stand alone, and to guard them as they learn to act for themselves, is the greatest kindness. We have protested against continuing that system which held the Indians pauperized by rations and prevented the development of their manhood and womanhood. Now, under the operation of powerful laws which we have set in motion, that old parental relation of the Government to its wards, involving duties which were never fully and wisely discharged by us, is coming to an end. Of course we ought to help our former "wards" to meet the especial dangers of the new life of entrance upon citizenship. We can help them most efficiently by Christian education.

When the Indian has taken his allotment and begun to manage for himself, how shall he be protected when he needs protection? Our first and instinctive feeling is that he ought to have the same sheltering and protecting arm about him that he has had in the past. But the question arises, How can this be? If the bill provides that when a man takes up an allotment, he becomes a citizen of the United States, how far can the Government still shield him? The Indian agent can not have his old power. What powers do remain to him? The courts have given different opinions upon this question. How the power that is to remain with the agents, while agents are still continued, how this power is to be defined by the ultimate authority, is an important question, which must await the decision of our highest courts.

But, meanwhile, Indians in this transition period are threatened with dangers which we can see at once clearly. They are going rapidly to destruction at some of the old-time agencies, under the flood of intemperance and of other vices, which pour in upon them under the greedy guidance of saloon keepers. We are driven to see the need of what Lowell speaks of as the work of greatest importance for educated men and women who love their country, the work of "strengthening the bases of personality" in these newly made citizens. And there is but one power that does this work effectively. There is but one power sufficient for it, and that is the power which the religious bodies here represent. It is the power that works at the center of life and out from the center of each man's life, breaking the power of temptation and strengthening manhood. We therefore turn with pleasure and interest to the reports of our religious societies. It has been our custom to hear from them in the alphabetic order of their names, and I shall call first for the report of the Baptist denomination, from Dr. Morgan, former Commissioner of Indian Affairs. He is not here, but he has sent us a message.

There has been no very marked change in the work carried on during the year, and that done hitherto, by the American Baptist Home Mission Society in the work among the Indians. Our work is confined entirely to the Indian and Oklahoma Territories, and embraces both missionary and educational effort. For many years the society has prosecuted its work among the Five Civilized Tribes, with very encouraging success; latterly, it has established mission stations among the Comanches near Fort Sill, among the Kiowas at Rainy Mountain and Elk Creek; very encouraging reports reach us from all three of these new stations. The society has employed, during the year, fifteen missionaries, one of whom, Rev. Dr. J. S. Murrow, who has been engaged in the work for about thirty-seven years, is now a general missionary, having the oversight of all of our Indian missionary work.

During the past year some new chapels have been erected, and especial attention has been given to the development of the Indian churches in the way of organization and self-management. It is estimated that there are nearly 4,000 Indians who are communicants in regular Baptist churches, and the general average of piety and of Christian life among them compares very favorably with that among frontier people of similar grade of general advancement in civilization. The total amount expended by us for strictly missionary work has been \$5,410.

The society sustains 5 schools: Indian University, located at Muscogee, Ind. T., with an attendance of 96 students; Cherokee Academy, at Tahlequah, with an attendance of 58; Seminole Academy, We wo ka, with an attendance of 137; Atoka Academy, Atoka, attendance, 127; Wichita School, Anadarko, Okla., attendance, 43; making a total of 461 pupils—241 males and 220 females. The whole number of teachers in these schools is 21, and the expenditure of the society for their support during the year has been \$8,234.21; so that the total amount of money paid for missionary and educational work has been \$13,644.21. This does not include the amount that has been paid for the erection of chapels.

Yours, very truly,

T. J. MORGAN,
Corresponding Secretary.

REPORT OF AMERICAN MISSIONARY ASSOCIATION'S WORK.

The work of the American Missionary Association, which represents the Congregational churches in the Indian field, was reported by Secretary C. J. Ryder, D. D. The A. M. A., is now reaching some twenty tribes with its schools and missions. There are 8 central stations with 60 missionaries, and 26 "outstations" with 40 missionaries. These missions represent all forms of Christian educational work. Industrial training is a prominent feature in some of these central stations. We have now the following industries taught in our Indian schools: Shoemaking, blacksmithing, carpentering, tinning, printing, cooking, sewing, nursing.

Some of these lines of industrial training are especially important and significant. Take printing to illustrate. The Indian pupil does not learn the English language in an indifferent and loose way, as is often the case, but accurately and exactly through typesetting. He must know the spelling of words and the construction of sentences even to their punctuation, in order to meet the requirements of this industrial discipline. The printing class work under the A. M. A. is the best possible means of Americanizing in language the Indian people.

The Dawes bill has been a very great help in this missionary work among the Indians. The Indians are taking property in severalty and so gaining permanency in local habitation, and little by little getting the idea of possession and of home. This land hunger, or desire for possession of real property, is the basis of all permanent civilization. The Dawes bill is making this possession possible, and the missionaries little by little are bringing the Indians to realize the importance of this personal possession of property. The home love and desire are also fostered by the missionaries of the A. M. A., greatly to the advantage of the Indians and to the permanency of their development. They also emphasize the duties and responsibilities of citizenship, holding mass meetings at Fort Yates, in which lessons of patriotism by object lessons are thoroughly inculcated. These A. M. A. schools planted on the prairies are the nurseries for the Indians in intelligent Christian citizenship, and are of incalculable value to the Government.

Another interesting feature of the A. M. A. work is the comparatively new mission at Crow Agency, Mont. The Congregationalists are the only Protestant denomination doing work among these Indians, of whom there are about 3,000, with the exception of a school under the direction of the Unitarians, but largely supported by Government funds. This mission of the A. M. A. is under the charge of a devoted young man and his wife, and has proved very useful and promising, but it suffers greatly for lack of funds.

Another important feature of the Congregational work under the A. M. A. in the Indian field is the progress and development of outstations. These outstations are in the heart of the Indian country. The teachers and pastors are converted Indians. As in foreign fields upon the testimony of experienced missionaries, so in our own field, no one can so effectively reach the heathen people as the members of their own nation when thoroughly converted. Acting upon this fundamental principle of successful missionary work the A. M. A. has commissioned Christian Indians who are doing work in the heart of these reservations. This has already proved an essential element and an important one in the final solution of the Indian problem.

The A. M. A. has work among the Indians in Nebraska, North Dakota, South Dakota, Montana, Washington, and Alaska. Notwithstanding the pitiful reduction of funds, this Indian work has forged ahead hopefully and encouragingly. The blessing of God has evidently been upon it and most self-sacrificing missionaries have been at the front. It is with great pain that Secretary Ryder reports that Dr. A. L. Riggs, of Santee Agency, Nebr., has been seriously and painfully ill from overwork, and that Rev. T. L. Riggs, of Oahe, S. Dak., has been stricken with blindness from the same cause. We hope that the loss of Mr. Riggs's sight is only temporary. But is not this an appeal to the churches adequately to support this great work, that this pitiful affliction has come upon Mr. Riggs through the lack of consecrated funds to carry on the work properly, and with sufficient force?

The hospital especially for Indian women and children at Fort Yates, N. Dak., which has been conducted by the A. M. A. for several years has been closed temporarily for the lack of funds. Last year the doctor, a Christian woman from the East, thoroughly trained for her work, reported 40 patients in the hospital, and professionally visited between 1,200 and 1,500 Indians in their tepees and cabins on the prairie. It seems a sad pity that such a magnificent work as this should be discontinued even temporarily. It leaves a multitude of Indian women and children in sad straits when sick.

To sum up I would say, first, that the central missions have suffered in numbers from the loss of Government aid, but improved in quality of pupils because such careful selection was made from the many who applied; secondly, that the outstation work of the A. M. A. has been especially prosperous and encouraging. It has been the prevalence of the gospel of Jesus Christ reaching the Indians in their homes and tepees, and proving as it always does "the power of God unto salvation" to the red man as to his pale-face brother.

FRIENDS YEARLY MEETING.

The report from the Friends Yearly Meeting was made by Mr. Joseph J. Janney, who said:

We are here, Mr. Chairman, to give evidence of our interest in our work rather than to make any formal report. In fact, the character of that work for some years has been of so little importance that it does not justify a formal report. We have been in the work for many years, with greater or less activity, as much as two hundred and fourteen or two hundred and fifteen years. But latterly we have been, in a measure, crowded out in view of the fact that other denominations, far more numerous and with much larger resources, have occupied the field to better purpose than we could. At the same time, we consider that we are in the field for such usefulness as we are capable of. We have been devoting our energies to the establishment of field matrons for the last eight or ten years, and it is a matter of satisfaction that that department is now pretty firmly established, though not on so large a scale as would be profitable to the Indians. The last Congress appropriated \$5,000 and designated that a portion should be used for furnishing equipments for these field matrons. That ought to be attended to. A field matron with a large area can not do her work successfully without equipment.

President GATES. I am glad that the field-matron work has not been forgotten. Can Dr. Hailman tell us anything further about it?

Dr. HAILMAN. Miss Cook is here. She has special charge of that and can tell us.

Miss COOK. I understand that for the coming fiscal year the appropriation is \$10,000. That will enlarge the work. There is a great advantage in having the missionary work back of the field matron. She needs the support of the regularly organized missionary society. It would be better if some of the equipment came from such a society, so that she could feel there is a power behind her that will furnish some of the sinews of war.

Mr. GARRETT. How much does it take to equip a place for a field matron, and how many field matrons are there?

Miss COOK. We could easily and wisely use 50. The salary is \$60 a month. The equipment would vary—perhaps from \$100 to \$200 a year.

President GATES. I do not think of any point where work will count for more than in this equipment and sending out suitable women for field matrons. The field was never so open as to-day, and never had so much need in many directions. The Commissioner in his report says:

“There are gaps and omissions in all directions. For instance, at several agencies the school accommodations of all kinds are 50 per cent, or less than that of the school population, as follows:

	Per cent.
Colorado River, Ariz	50
Tongue River, Mont.....	50
Uintah and Ouray, Utah.....	47
Eastern Cherokees, N. C	44
Western Shoshone, Nev	41
Nevada, Nev	41
Moquis, Ariz	30
Pima and Papago, Ariz.....	30
San Carlos, Ariz	25
Navajoes, Ariz	4
Jicarilla, N. Mex	0
Southern Ute, Colo	0

“Many other tribes have but little over 50 per cent of their children provided for.”

The following report was given by Mr. Edward M. Wistar:

REPORT FROM ORTHODOX FRIENDS.

[By Edward M. Wistar.]

For many years President Rhoads has been the only properly qualified person to report on behalf Friends' work. A report was prepared by Dr. Rhoads shortly before his death and it can be read. The Indians are advancing slowly but steadily. During the past year we have also lost by death Charles W. Kirk, the head of the work in the field. He had charge of all those stations in which we had an interest and he made monthly reports. His death seemed almost to cause a stoppage of work for a time. His wife, however, was able to continue it to an extent. George M. Hartley has been appointed by the committee to take charge of the work. The chairman of that committee is John Nicholson, of Baltimore. He has been in office only one year, but has done excellent work. We are scattered over the country. The repre-

sentatives come together once a year. In the Indian Territory there is a school specially under the charge of and supported by the Friends of Philadelphia which is giving us very good satisfaction. Eva Watson is at the head of it. Her parents live with her and take part in the work. There are about 80 children in the school.

The report written by President Rhoads before his death was read by General Whittlesey.

To the Board of Indian Commissioners:

The associated committee of Friends on Indian affairs reports:

The conditions that attend efforts for the preparation of the Indians for citizenship have greatly changed in the Indian Territory within a few years. The whole of Oklahoma has been thrown open to white settlement and the Indians resident in it have been brought suddenly into contact with the white people. The lands of several tribes have been allotted and the surplus sold. This has scattered the Indians in some cases, and removed them from the schools and church buildings that had been erected for their use, and has greatly disturbed and troubled the people. To a surprising degree it has become more difficult to come into direct contact with the Indians and they have seemed to be partially lost among the whites or to have withdrawn to isolated spots. Alcohol, vices, violence, and disorder have come in with the white settlers, and have increased the difficulties of the Indians. But the old law that all advance is through suffering has been again exemplified. These changes are forcing the Indians to endeavor to meet the new issues before them.

They feel more keenly than ever the necessity for work, for education, for Christianity, for adaptation to the modes of living common to white people.

The committee has now 23 organized congregations in Oklahoma and Indian Territories, an increase of 3 over last year. The membership is a little over 1,000, an increase of nearly 200. Of the whole, about 440 may be classed as Indian. The average attendance at worship on first day mornings has been 797; at Bible schools, 505. The death of our superintendent, Dr. Charles W. Kirk, whose practical wisdom and fervent zeal fitted him for his duties, has for a time somewhat checked the progress of the work.

The Modocs continue to advance. Seventy-eight per cent of the band are church members, and they have gained in steadfast Christian morality and industry.

The boarding and day school at Skiatook has been prosperous and efficient, with 86 pupils. The Blue Jacket day school has had about 10 Indian pupils and some white children. The Iowa day school has been kept up, but most of the band have moved away to allotted lands. The boarding school for the Mexican Kickapoos has had 26 pupils, whose needs as to food, clothing, and lodging have been supplied. This band has suffered shameful injustice as relates to their lands from one or more white men, yet continue to trust those who have proved faithful to them, and are more than ever disposed to embrace Christianity and a settled, industrious life.

White's manual labor school near Wabash, Ind., has been as efficient as ever and has had 66 pupils. Reports from wholly unprejudiced sources as to the good character of the returned pupils of this school have been received. The Government has furnished about two-thirds of the actual cost of educating the pupils; the remainder has been supplied from private funds.

The mission on Douglas Island, Alaska, has continued to do efficient work. The school has 35 pupils, and there are 40 church members. Some of the Indian pupils have been sent to schools in the States to secure for them a more complete training. A mission school has been opened upon Kake Island, Alaska, for the benefit of the several hundreds of Indians living upon that island.

The school at Tunesassa, New York, supported by Friends of Philadelphia, is vigorously conducted, and its good effects are manifest in many Indian homes.

It is very evident that the Government should continue its guardianship over many Indians who have had lands allotted to them, and who are very unequal to the struggle with the competition in our social and industrial life. More care should also be exercised not to allot lands to Indians yet unprepared for it, and not to sell the surplus lands too hastily when allotments have been made.

JAMES E. RHOADS,
Chairman of Committee.

BRYN MAWR, PA., 12 Mo., 28, 1894.

MORAVIAN.

Mr. J. TAYLOR HAMILTON. Permit me to report that our society (the Society for Propagating the Gospel among the Heathen—Moravian Mission Board, at Bethlehem, Pa.) expended \$9,676.09 on work for the aborigines of this continent during 1894. The sum would have been larger were it not that our missionaries to some extent support themselves by farm work, etc. We received no aid from Government for schools during this period. We have seven stations, with four filials. While noth-

ing of novelty is to be reported, I may add that Christianity is making decided progress in the valley of the Kuskoquin in Alaska. Our missionaries report that during the winter of 1893-94 no heathen ceremonies took place in six of the prominent villages of the region throughout which their influence extends. The winter was a very trying one, cases of starvation being reported. Hence we all trust that the reindeer experiment may continue to develop in a gratifying and speedy manner. Three native helpers are doing efficient service at various villages along the river. Two boys, David Skuviuk and George Nuklachluk, Eskimos, partially educated at Carlisle, Pa., are rendering satisfactory assistance in the school work as monitors, etc.

The Rev. Dr. William C. Roberts was asked to report for the Presbyterian Church.

THE WORK DONE BY PRESBYTERIANS.

Dr. Roberts first read a brief outline of the work done during the year by his church, then spoke as follows:

Time will not admit of my taking up our Indian schools one by one because there are too many of them, as you have learned from the enumeration I have just given. I will confine myself therefore to certain salient points or important features of the work, as a whole. Let me call your attention—

First, to the number of our pupils. It is large for one church to take care of. We have at the present time in both day and boarding schools very nearly 2,500. More than 1,000 of these attend our boarding and industrial schools. The latter are very expensive, requiring from \$100 to \$150 for each pupil. The difficulty in raising money on account of the prostration of business and the relinquishment of Government appropriations, have led the woman's executive committee and the Board of Home Missions to consider not the propriety merely, but the necessity of reducing this number in the near future.

No less interest than formerly is felt by the church in the Indians. She does not put less value on their souls because she expects no longer to receive aid from the Government toward their education. The proposed change is due to the impossibility of raising sufficient funds to keep up the work at its present dimensions. The proposition now is to reduce the number of our day schools and to admit fewer pupils into our boarding and industrial ones. But in doing this we hope to be able to adopt a plan that will not largely diminish the ultimate value of our work. It is proposed, first, to give up those day schools which are located in places where there is a Government or a denominational school and urge the pupils to attend it; second, to reduce a boarding to a day school in those places where the parents can, by a little effort and economy, board their own children; thirdly, to consolidate two or more of our boarding schools, if they are near enough, without destroying or seriously injuring the work; and, fourthly, by dismissing from both kinds of schools all those who, by their conduct, are a detriment to the other pupils, who make but little use of their privileges, and who will be of little value to the church or the world if they should be allowed to remain in school any number of years. In other words, we propose to practice our good old doctrine of election in our treatment of Indian pupils.

Second. The character of the work done during the past year. As to its quality, I can confidently assert that it is better than that of preceding years. This, of course, is to be expected. Experience has taught us much concerning the peculiarities of the red man, and the kind of instruction best adapted to his mental, moral, and social condition. Acting upon this, we have made a number of important changes. Superintendents and teachers have been selected who are not only interested in the Indian, but who are also well acquainted with his character and condition. We have endeavored, as far as practicable, to introduce into our schools just such industries as the Indians are likely to take to and need where they live in order to earn a respectable subsistence after they have left our school. It is a part of our plan, also, to appoint for every good-sized boarding school a physician to take care of the sick as well as to teach some branch of study. In a few of them we have hospitals with a fair amount of convenience for taking care of the sick and the injured.

Third. We have recently discontinued applying to the Government for appropriations to carry on our schools. The general assembly passed a resolution to this effect a year or more ago, but the board had then unexpired contracts that made it impossible to give it up at once. Presbyterians believe in the sacredness of contracts and agreements, and try to carry them out to the last jot and tittle. In a late discussion on the subject by the officers of the board, the allegation was made that the Government acts in this whole matter merely as a guardian, paying for the schooling of the Indians out of the money it holds for them in trust. If that be the case, it is hard to see the force of the cry that this is a question of church and state. Whatever may be the relation the Government holds to the Indians, its apparent, if not real, partiality shown in giving so much larger sums to the Catholic than to the

Protestant churches is a sufficient reason for severing the connection. Just at this point three important questions arise, namely:

(1) Is it the intention of the Government to put in its own treasury the funds which the Christian churches decline to accept? If so, Presbyterians believe that great injustice will be done to the Indians. Even if every dollar of this saved money is afterwards given to the tribes for food, farming implements, and home comforts, it will not be half so valuable as education would be to them in early life. The guardian in such a case would not be doing, in our judgment, the best possible thing for his ward.

(2) Or is it the intention of the Government to ask Congress for the same amount of appropriation and give the whole of it to those churches which are willing to accept it? That will be deemed an outrage, for the whole or nearly the whole of it in that case would go to the Roman Catholic Church. That is the only body at present which introduces into the schools sectarian doctrines and forms of worship, which has furnished any ground for the charge of the union of church and state. Such a course will inevitably bring upon the Government the anathemas of all the Protestant denominations in our land. The synods and the general assemblies of the church I have the honor to represent will certainly continue to issue their protests against it until such a practice ceases.

(3) Or is it, on the other hand, the purpose of the Government to ask for the same amount of appropriation from Congress and spend it all in the multiplication and betterment of its own schools? If this be the plan, I am sure the Presbyterian Church will aid the Government by all means in her power. She will use her utmost endeavor to supply the religious element which it can not supply for the civilization and christianization of the Indians. Happily, she is in a position, not through any sagacity of her own, but through the providence of God, to prosecute with advantage the pure work of missions among them. Within two years all the Indian missions that had been under the care of the foreign board have been transferred to the home board. There is a number of missionaries and native helpers in these missions who can be deputed with profit to labor in connection with the Government schools. If things should take this turn Presbyterians may be depended on in the future as in the past to aid in elevating the red man.

Within the past year striking evidence has been furnished us of the practical interest felt by our people not only in the Indians, but also in the Eskimos of our land. It is frequently alleged by those who are not favorably disposed toward the Christian religion, that its adherents are not willing to exercise the same self-denial for the sake of saving souls that worldlings are to prosecute business or to secure gold. This is an error. As soon as a report was circulated that Mr. Stephenson, the Presbyterian missionary at Point Barrow, was about to return to Ohio, leaving the mission without a teacher or preacher, urgent applications came to the board for the position. Though Point Barrow is within the Arctic Circle and is the most northern place at which there is a mission established by any church, though the cold winds are almost unendurable to white men, and though the privations from the want of food, of decent society, and of mails from any quarter are beyond description, yet five or six parties, delicately reared in different States, have applied for a commission to go thither to teach 300 or 400 of the most ignorant and uninviting natives of our country. This is heroism seldom equaled. Nothing but the love of Christ could constrain anyone to make such a sacrifice for the sake of benefiting his fellow-men.

PRESBYTERIAN CHURCH (SOUTH).

Rev. J. N. CRAIG, D. D., Our church, "The Presbyterian Church in the United States" (South), has had all or a part of the services of nine missionary ministers in the Indian Territory, in the Choctaw and Chickasaw Nations, during 1894. Four of these were Indians, five were white ministers.

We also have seven schools, two of them at Durant and at Cameron, Choctaw Nation, of high grade, with over 60 pupils each. The other five are taught by ladies, neighborhood schools.

Our expenditure for the year: \$1,048.50 in school buildings and \$4,116.50 for salaries of missionaries; total, \$5,165.

I regret that I am unable to accept your invitation to be present at the annual meeting of the commissioners on Wednesday. Permit me to take this opportunity to express my appreciation of the courtesy of the commissioners in inviting me year after year with the representatives of other societies engaged in education, charitable, and religious work among the Indians, to attend the meetings of the commissioners.

I recall that on the first occasion of my going to Washington to meet the commissioners, nine years ago, I ventured to express the opinion that the custom of making appropriations to aid religious societies was at variance with the spirit of our

institutions and likely to work harm. The convictions of the public upon this subject have certainly been manifest of late in earnest protest against the subsidies of religious bodies by the United States Treasury.

I have observed that it is now proposed that the appropriations for contract schools shall be reduced 20 per cent each year until the system is abolished. May I ask whether a more rapid extinguishment might not be accomplished without serious hurt? The growth of the evil above referred to is forcibly illustrated, to my mind, by the fact that one religious body has come to receive annually from the United States Treasury for its missionary work among the Indians a sum equal to the whole amount that this society of the Episcopal Church expends for all its missions, not only to the Indians and the colored race, but throughout the United States and in foreign lands.

I regret to notice the announcement of the death of Commissioner Painter. He has certainly been a devoted friend of the Indians.

Sincerely yours,

WM. G. LANGFORD.

REPORT OF THE MONTANA INDUSTRIAL SCHOOL, CONDUCTED BY THE AMERICAN UNITARIAN ASSOCIATION.

To the Secretary of the Indian Commission:

The Montana Industrial School, which is conducted by a committee appointed by the American Unitarian Association, has carried on its work as usual during the past year. The school has now been established eight years, and the committee in charge feel that the work which has been begun with these Indian pupils, some of whom have been in the school for several years, ought not to be suspended. The question how the school shall be carried on in the future is one which is at present engaging very seriously the attention of the committee in charge of it.

At the last meeting of the National Unitarian conference held at Saratoga in September last a resolution was introduced by the writer, Samuel J. Barrows, to the effect that no further money from the Government should be received for carrying on this school, and also urging the Government to extend its own work of education among the Indians to the full extent of the responsibility which belongs to it. This resolution was introduced too late to receive full consideration and discussion, and therefore a vote was not taken upon it, but it is safe to say that there are many who would have voted for it under the conviction that the United States Government ought not to appropriate money to be expended by different religious bodies in any denominational work. It should be distinctly added that the motive of the writer in offering this resolution was not to interfere with the relations of any other religious body with the United States Government, and was not to express any feeling that the money now received by any religious body is being misappropriated. It was simply an expression of a conviction that in this country the functions of state and church should be separated and the present arrangement with the Government seems a distinct violation of this principle.

Unitarians have endeavored to use the money they have received from the Government and that which they have raised themselves for Indian education in a broad, unsectarian manner, and for the purposes of education rather than for religious propagandism. They have conducted their school almost precisely on the same lines as the best Government schools. They have a conviction that for the last eight years the Government has not been helping them to do their work so much as they have been helping the Government do its work. With the dissolution of the Government contract there are therefore two methods which might be adopted for carrying on the school. One is that Unitarians should carry it on simply as a private or denominational enterprise. The other is that the United States Government should take the school and carry it on as a part of its school system. If the question were of the dissolution of the school, I have no hesitation in saying that its friends would unite to maintain it in the future as it has been maintained in the past. But this school was established and carried on under the conviction that something must be done by private enterprise for the education of the Indians until the United States Government was ready to do what it can and should do in this matter. If, therefore, the Government is now ready to give all of its Indian wards the education which they need and which it ought to bestow, the committee of the American Unitarian Association will very gladly, we believe, commit to the Government this special enterprise on the Crow Reservation.

With the view, therefore, of making it easy for the Government to extend its work the Indian committee have made a proposition to the Indian Commissioner offering to turn over the buildings erected and maintained by the American Unitarian Association on the Crow Reservation to the United States Government on condition that a school shall be maintained there and that the present enrollment of pupils may be continued, and that the teachers and employees may be continued if found qualified

for their work, so that no violent change may take place in the administration of the school.

This proposition has been indorsed by the superintendent of Indian schools, Dr. Hailman, and has been submitted to the Indian Commissioner, but an official answer has not yet been received.

The proposition thus made involves a sacrifice to the Unitarians of several thousand dollars for the value of their buildings. They have full confidence, however, in the Government school system, and also in the policy set forth by the Secretary of the Interior in his report and by the President in his message in regard to the absorption of denominational schools by the Government and the general extension of Indian education.

The committee appointed by the Indian committee of the American Unitarian Association to negotiate this matter were Rev. Alfred Manchester, superintendent of Unitarian Indian work, and Rev. S. J. Barrows.

I am your obedient servant,

SAMUEL J. BARROWS,
For the Committee.

President GATES. This completes the list of reports from churches. When at Hampton I heard a young man from Alaska, Mr. Marsden, speak, and he interested the 700 students wonderfully. It was one of the three best addresses I have heard within a year. Seven or eight years ago this young man did not know a word of English. He is now a senior at Hampton. I shall now invite another man from Alaska to speak, Dr. Sheldon Jackson.

Dr. SHELDON JACKSON. With regard to Mr. Edward Marsden, he was a delegate from one of the Christian Endeavor societies to the great convention at Cleveland last summer. A minister from New York who was present said to me that Mr. Marsden's address, to his mind, was the best one made on that occasion in that great convention. Mr. Marsden is also the man that is being helped by the Mohonk conference. The members of the late conference will remember that they raised a sum for assisting young men, to give them better facilities for a higher education. For two years Mr. Smiley has sent me \$100 a year for Mr. Marsden's education at Marietta College.

ADDRESS ON WORK IN ALASKA.

[By Rev. Sheldon Jackson, D. D.]

The last printed report on education in Alaska, 1891-92, is now ready for distribution, being received from the Government Printing Office last week. The work changes little from year to year.

When the Christian denominations voted to cease taking money for contract schools Congress cut off \$20,000 from the appropriation instead of taking up new school work. The reduction in the appropriation has hampered our work and closed three or four of our schools. This last year we had 16 day schools, with 846 pupils, and 15 contract schools, with 592 pupils, making 1,438 pupils in school out of a total school population of 10,000. From the appropriation given by Congress less than 15 per cent can be educated. To the eight contract schools the Government gives \$7,892, averaging \$15 for every boarding pupil. On the other hand, the churches gave \$77,967; that is, the churches put in \$10 to every \$1 that the Government put in for the support of the contract schools. At the present stage of civilization among our Alaska natives there can be no sectarian instruction, as it is understood among us. The schools are all primary, and we cannot make sectarians of the people if we should try. There is no sectarian training.

I would like to call your attention to the wise distribution of effort on the part of the Government and of the churches. The work is arranged in such a way that the schools are located in the widely separated centers of influence. Not being able to supply every place, we have designed to take strategic points. In southern Alaska the Presbyterian Church has six missions and a training school; the Friends have two missions, and the Roman Catholics one. In the same region the Government has ten day schools. Three hundred miles north of the Presbyterian missions is one of the Swedish Evangelical, with a school attached. Five hundred miles westward are Government schools at Kadiak and Afognak, and a Baptist mission-home school at Wood Island. Four hundred miles farther west a Government school, at Unga, and 200 miles west of that a Government school at Unalaska, one of the Aleutian Islands. There is also at Unalaska a very successful mission to girls that is supported by the Women's Board of Home Missions of the Methodist Episcopal Church. They attend the day school carried on by the Government.

Eight hundred miles northeast from Unalaska are the great rivers Kuskokwim and Nushagak, where the Moravian Church has missions, and in connection with which are two Government contract schools. The Moravians have had extensive revivals.

Their missionaries travel each winter thousands of miles on snowshoes, with the thermometer from 30 to 40 degrees below zero, preaching all up and down those valleys.

Crossing into the interior of the country, upon the Yukon River, there are three Roman Catholic contract schools. The Protestant Episcopalians have two missions and day schools. They receive no funds from the Government. To the east of the Yukon there are three schools and missionaries of the Church of England receiving, of course, no aid from the American Government. West, 200 miles from the Yukon, is a mission and school of the Swedish Evangelical Union Mission, whose headquarters are in Chicago. Four hundred miles farther you have a school of the American Missionary Association on Bering Straits, aided by the Government.

You will remember that two years ago Mr. H. R. Thornton, a missionary of the American Missionary Association, was killed at Bering Straits. To show their abhorrence of the murder, the natives at once caught and shot two of the three young men connected with the deed, and promised that they would kill the third one when caught, and keep his body on ice until the vessel came back again in the summer, to show that they had killed him. The man did come back, after the departure of the ship, and his uncle caught him and told him that he might take his choice of being shot or hanged or stabbed. He chose to be shot, and was at once killed. At the time of the murder Mr. W. T. Lopp, the second missionary of the A. M. A., had gone to take charge of the reindeer station. Last fall he, with his wife and two children, returned to Bering Straits, where they are now, the only white people in that village of 600 people. They were warmly welcomed back by the people to the mission work. Mr. William A. Kjellmann, a Norwegian from Madison, Wis., has been appointed to Mr. Lopp's place at the Teller reindeer station, and with him are seven Laplanders who know the best methods of caring for the reindeer. We brought them, with their families, from Lapland, and they were taken across the continent to the station. Immediately upon their arrival they showed their proficiency over the Siberian herders in the treatment of the herd.

The reindeer enterprise, so far, has been a complete success. Since its establishment in 1891 there has not been a single reverse, and all the prognostications have failed. We have had no difficulty in transporting them or caring for them, nor interference from the natives or from their dogs. This action on the part of the natives is the more remarkable from the fact that in the later months of the winter they are on the verge of starvation. Day after day the men and women and children go out on the ice in the early morning, trying to fish for something for breakfast; and they fish there over a hole from three to fifteen hours sometimes before they get anything. And yet that reindeer herd, within half a mile of them, and at that time under only two white men, was untouched. It would have been easy for them to kill the herders and take possession of the herd, but it evidently did not occur to them to disturb the reindeer. Out of about 400 at the station last spring the births numbered 200, so that we had 200 natural increase. This past summer, 120 more were brought over and added. We have made our first experiment in distribution. One hundred and eighteen were given to Mr. Loop, and he took them to his station. That is now our second herd. Arrangements were also made that upon the 1st of January a third herd of 100 should be given to five of the best Eskimo young men, those that have shown the greatest proficiency in caring for the herd. The agreement which they have signed, with their names, not making their mark, is that at the end of five years they shall return 100 reindeer to the Government and keep all the increase themselves. This, we trust, is the beginning of a distribution of reindeer that will eventually introduce them over that whole country. The Laplanders say they never saw such abundant pasturage as they find in northern Alaska.

The dissemination of the reindeer has a great bearing upon the development of the interior of Alaska. During the last summer unusually rich gold deposits have been found upon the smaller streams. One miner, as a result of two month's work, took out \$12,000 in gold dust, of which \$8,500 was net profit. Four men took out \$30,000. There are about 700 men in that region now; they expect, this coming spring, to have 1,000 miners go into central Alaska, where the thermometer is in winter 70° below zero. The question of food supply is a pressing one to the miner. Small steamers ply for 2,000 miles up the Yukon. They can carry provision in summer, but they cannot take it up the small tributary streams, upon which most of the mines are situated. There are not dogs enough to convey it by sleds, and consequently the miners are obliged to leave in the winter. They are urging the Government to hasten the time when they may have reindeer for transportation, and to increase the herds so as to develop the industry in the central portion of the country. The commercial interests demand this rapid extension.

Every winter the whalers, who have destroyed the whales in the neighboring waters, are now compelled to go round the most northerly point, 800 miles, near the mouth of Mackenzie River, and allow themselves to be frozen up. Twelve ocean steamers are frozen up there this winter. Five of the captains have their wives with

them, and there are six or seven children. If these men could have a mail communication with the rest of the world it would be worth, to the capitalists that furnish these steamers, many thousands of dollars in fitting out the fleet next spring. They do not know what to depend upon; they do not know what has been the success of the Arctic fleet.

It is proposed, as one of the possibilities, to establish a reindeer express, starting from Point Barrow, calling at the several mission and the reindeer stations, crossing to the Yukon, and coming down to the coast near the Chilcats, where the mail vessel can go once a month through the entire year. The Government is now talking of making a trail from the sea to the Yukon River. That will open communication out from the country, and keep these whalers from being cut off from communication with the outside world.

Question. What would be the whole length of such a route?

Dr. JACKSON. Including all the branches, it would probably be about 4,000 miles. That is the only way of communication unless you could hire natives.

Question. What is the latitude where those whalers are frozen in?

Dr. JACKSON. About 70°, I think.

Question. What is the speed of the reindeer?

Dr. JACKSON. In good condition, and when the snow is good, they will make 18 miles an hour. In Lapland they easily make 150 miles in twenty-four hours. A hundred miles a day for a reindeer in Lapland is ordinary traveling, if the snow is in good condition.

Question. You say the allowance for the students by the Government is \$15 a year. What does it cost for each student?

Dr. JACKSON. Probably \$75 year.

Question. For what purpose is whaling carried on now?

Dr. JACKSON. For the bone. Kerosene oil is so cheap that whale oil is now of little account. The commercial value is in the bone. It is worth from \$7,000 to \$10,000 a whale, according to the size of the whale and the quality of the bone.

Col. M. H. Kidd, one of the commissioners to the Indian Territory, was next introduced.

THE INDIAN TERRITORY.

[An address by Col. H. M. Kidd.]

MR. CHAIRMAN, LADIES AND GENTLEMEN: I spent about four years in the Regular Army as a commanding officer in the Indian Territory and Oklahoma, at Camp Supply, Fort Sill, and Fort Arbuckle. It was my business to study the character of the Indian, and I did what I could. For the last year I have been in the Indian Territory, among the Five Civilized Tribes, under the guidance of ex-Senator Dawes, endeavoring to make a contract with them for the division of their lands and the acceptance of a Territorial instead of a tribal government. I have very decided views with regard to the way to civilize the Indian. It is absolutely necessary, if you would civilize and Christianize the Indian, that you should look after his temporal wants. You might as well undertake to civilize a man or woman in the cellars of New York as a nomad Indian. You must first localize him and establish a home round which will cluster his hopes and his love.

I have heard some things here that I may say I do not agree with.

President GATES. We make it impossible for any one to leave these conferences without hearing some things that he does not believe in.

Colonel KIDD. The cruelest thing the Government ever did was to allot land to the Apaches, the Arapahoes, and the Cheyennes. Last summer I had some curiosity to see what progress had been made since the land was allotted. I find the wild Indian tribes in groups together, destitute, living, or eking out an existence upon rations, brought in contact with the lechery and saloons of that new country; and I say to you that they were being borne down a hundred degrees where they were being elevated one, by the influences around them. I do not approve of the allotment of land among Indians until they have reached a point where they are fit for it. And the five tribes of the plains are not fit for it—the Comanches, the Kiowas, the Arapahoes, the Cheyennes, and the Apaches.

I wrote to Judge Holman that the only way the Government could repair the injury done to this people was to have them cede their allotments to the Government, and move them to the Kiowa and Comanche country, and take charge of them and shut out from them all the bad influences of whisky and bad white men, until they had reached a point where they were fit to take care of themselves. They are being made drunkards of to-day in Oklahoma.

There is another way that they might be helped. If you could find honest men, devoted to their duty—and I want to say that after they get out there there is a wonderful shrinkage of that virtue—if you could find such men who could go out to these allotments and have some provision made by which the Indians could have

houses put upon their land, could have their ground fenced off and plows given them, and so have them encouraged in a small way to raise something to live upon, that would be an immense benefit to them. Perhaps, under the existing circumstances, that is the best thing that can be done for them.

The Kiowas and Comanches have made a contract with the Government for the division of their land and the cession of the residue. The Government has never approved that. When I was there many of the people were making commendable efforts to make houses, but there is much misdirected effort among those that try. The country is leased out, most of it, to cattlemen from Texas, and the Indian does not dare to have his house out on his land, for he must protect his family against the cowboys. So they are building houses close together where there will be too many on one allotment. They will have to be moved from there. If there could be somebody to direct them it would be better.

I talked with a subagent there about it and he told me that he had not time to give them the attention that they ought to have, and it was impossible, over such an extent of country, to direct them.

Now, about the Five Civilized Tribes. While allotment is ruin to the Indian before he is fit for it, there comes a time where tribal government, the holding of land in common, is the worst possible injury that can overtake him. The governments of the Five Civilized Tribes are utterly inefficient; they protect neither life nor property. The blood that is being shed by the whites and Indians, the robberies that take place and other crimes, are carrying these people back to barbarism, and undoing what people have been doing for them for fifty years. I have been there with Captain Kennan and Senator Dawes, and this is the conclusion that we have all reached.

We have been trying to effect a change. We have failed so far, and the prospect is discouraging. The country of the five tribes embraces about 20,000,000 acres of land. There are mountains and hills with black-jack groves, in which the land, except in small valleys, is worthless for cultivation. Here the real Indian settles, and raises hogs on the acorns; they find springs and wood convenient, and make their homes there. The balance of the country is one of the finest that the sun shines on, but it has been taken possession of by "intermarried citizens," as they are called; Senator Dawes calls them "squaw men." They are white men married to Indian women, and their descendants. Some of them have married for proper purposes, and some are educated and accomplished men; I am not speaking of squaw men with disrespect, for many of them are estimable gentlemen.

A few avaricious and grasping men have taken possession of nearly all this valuable land, and are holding it in quantities of from 5,000 to 100,000 acres each. In the Creek country they pay 5 cents an acre for the use of it, and let it for 50 cents to \$1 an acre. These half-breeds or mixed bloods and intermarried citizens do not treat the Indians as if they were human. You may say that is not speaking in a complimentary manner of them. It is true. There is a great deal of bribery, and they reconcile their consciences to this by saying, "That is the way with State legislatures and State governments." They say to the Indians, "Congress sells out, and if you do not do that you are not doing like white men." When I have talked with them about this they say, "It is not a bit worse than Congress."

They have in various ways monopolized the whole country, and the Indian, who ought to enjoy the benefit of it, has to live in the barren, hilly part of it, with his house, a typical Indian house, a log cabin 14 feet square, with a cook stove, a deal table, and a rough bed; that is usually the extent of the furniture. But the Indian woman is a model housekeeper, so far as cleanliness is concerned. There is generally a shed on one side. The women take care of the house and do the little farming that is done. You will find that they pick out from 1 to 10 acres in some little mountain valley near the houses, where there is a bit of land that can be cultivated. Here the squaw and the children raise corn, beans, and sweet potatoes, and these, with an occasional acorn-fed hog, constitute the substance of the food for the family. The wealth of a family consists in a few hogs and sometimes a few cattle running over the country. The Indian man has perhaps a horse, saddle, and bridle, and in the morning he gets up and when the rations are short he rides out to a more favored neighbor and gets his victuals there, while his wife and children remain in destitution. Yet that man and woman and their children are owners of princely fortunes, but the white intermarried men have got it and are enjoying it.

The Choctaws and Chickasaws, as near as we can make out, will have about 700 acres of land each, as good as there is in the world; and yet the white man has got it and the Indian is living in such a way that it is impossible to force an existence out of the soil. The intermarried men chuckle and say, "We have got it, and what are you going to do about it?" We can not make those men give up the land. This conference will do very much if it can aid in extricating these poor people from this condition.

The Cherokees have two fine schools. There is not a full-blood Indian pupil among them. They have a fine corps of teachers in each. The children appear to

be white, but most of them have a little Indian blood, though you would never suspect it.

President GATES. Can the children of white citizens of the United States come into these schools?

Colonel KIDD. No; they are not allowed any privileges at all. There are neighborhood schools, but, as a rule, they are mere shams; most of their teachers are incompetent and take no interest in their work. They teach for a pittance, but they teach only for the sake of the money. That is one evil.

If you will help the Government to make these intermarried men let go, and restore to the Indian what belongs to him, you will perform a real service to the Indian.

We have said to them, "We will divide the land. We will not buy an acre of it. We will put the title into your own hands, so you can not sell it, and no man can take it from you. The land will be made inalienable during your life, or for fifty years if you want to make it so."

When you go down there—as Senator Dawes can attest—you fall into the hands of these wealthy gentlemen, who are all along the railroads and in the towns; and they will take you out riding, and tell you all about the thing, and how well the Indians are getting on, and how wonderful it all is. When we first went down there we thought it was so; but by and by an Indian came in and asked if we would talk with a common Indian. We said, "Yes, of course," and he came up. He was a Cherokee. We talked with him, and then we began to find that there was something beneath the surface that we had not expected, and we learned some facts about the situation. We said to him that if any others wanted to come and talk to us, he was to tell them to do so, even the freedmen. Then they came, and our office was literally filled for days and weeks with those people who came there to tell us the true situation. We asked them why they did not make these representations to their governments, and let them know what the people wanted. One of them replied, "It is not healthy to advocate allotment in this country. It frequently lightnings from behind a tree." It is treason, in the constitution of the Cherokee Nation, for any man to hold communication with a "foreign government," and there is a tradition in the Cherokee tribe that any man who advocates allotment shall be held guilty of treason, and executed by any Indian who meets him. They do not dare to say anything there in favor of allotment.

Another thing: There are 250,000 white people in that country, 60,000 white children without any schools. All the education most of them have is daily association with criminals who go unwhipped of justice. They are trained in such a way that they will become criminals and a curse for generations to that and surrounding States.

Now, these evils can only be reached by the organization of a Territorial government that will establish schools. But these gentlemen stand back and point to the treaty and say, "Did not you solemnly promise that you would not establish a Territorial government without our consent?" Yes; but it was also agreed that the white men should be kept away. They have invited the white man in until there are 250,000, while there are only from 50,000 to 60,000 Indians in the five tribes. But they fall back upon the treaties and insist that those treaties protect them, and the Government ought not to violate its treaty. But there has been no attention paid to these treaties through all these years; they have disregarded them. We have disregarded them, too; there is no question about that. And the Government has the right always to repeal or abrogate a treaty when, in its judgment, it deems it desirable to do so, being answerable to its conscience in disregarding treaties to the other party.

The Secretary of the Interior has been trying to establish courts that should stop the perpetration of crime there. When we first went down, and found the situation, I wrote to a Senator from my State, suggesting changes in the judiciary for the benefit of these people, and he offered it as a memorial in the Senate, and they have been trying to drive me out ever since. Here to-day in Congress you can not get a judicial bill passed that will reach the evil. Why? The United States district courts at Fort Smith, Ark., and Paris, Tex., have jurisdiction of offenses committed in the Indian Territory, and we spend \$200,000 on each of these courts. That is a rich find for the criminal lawyers of those towns, and for the saloons, and for the boarding houses. They do not want to give that \$200,000 up. Now, the Government made a law long ago that there should be no intoxicants brought into the Indian Territory, but they take the Indians right to Fort Smith and to Paris, away from home and the restraints of home, and keep them idle in these towns, and the fees that they receive are poured into the saloons. Judge Culberson lives in that district, and so far as I can see, for a purely selfish purpose, fights this change in the judiciary, and he is aided by the cattlemen of Texas, who want this region as a grazing ground.

I am talking plainly, but I am talking about what I know, and what I say will be

verified by every disinterested and intelligent man in that region. I have said, perhaps, more than I ought but the first thing that we ought to try to do is to give the Indian in the Indian Territory his land and establish a home for him. If he gets his money he will have abundance to make a house for his family to live in, and have suitable stock. He may then establish his home there. Then you may Christianize him, and if you have made a Christian of him you will bless him and perhaps be able to keep him a Christian.

Adjourned at 1.15 p. m.

SECOND SESSION.

WEDNESDAY AFTERNOON, *January 16.*

The conference was called to order at 2.45 p. m. by the chairman. Dr. W. N. Hailmann, superintendent of Indian schools, was invited to speak.

ADDRESS OF DR. W. N. HAILMANN.

I find in my work, wherever I go, that progress in Indian educational work is due chiefly to friends of Indian education, and on that account I feel, when I address you, that I speak to those who, if my suggestions are of any worth, will help the realization of these suggestions.

One of the questions which has presented itself to me as of the utmost importance within the last few months is that of the relative value of reservation schools and nonreservation schools. There are powerful parties, in and out of Congress, who hold that the nonreservation school has scarcely legitimate work to do in Indian education; that the nearer we bring educational work itself to the reservation the more efficient will the work be; that it would be a wise thing to reduce the nonreservation schools gradually and to substitute for them schools on the reservations.

The chief argument brought in favor of this proposal is that those who graduate from the nonreservation school, when they return to the reservation, are not prepared to enter into the tribal life upon the reservations; that, nevertheless, they soon lose whatever the nonreservation school has given them and become, to all intents and purposes, again savage Indians. On the other hand, they hold, boys and girls brought up in the reservations, upon their return home to their parents, from whom they have never been very widely separated, who have seen them again and again during the time that they have been at school, and are still identified with their tribes and agencies, with their home people, and their interests—when such boys and girls return to take up their residence on the reservations there is less danger of their losing what they may have acquired than in the former case.

This argument is very plausible. Yet when we look at it in the light of the general tendencies and policy of the Government with reference to the Indian problem, of so managing Indian education and the treatment of the Indians generally that as soon as possible the tribal relation shall be broken up; that as soon as possible reservation life shall cease, then it appears that it would be the opposite of prudence to do the thing that will maintain and strengthen reservation life, and that we ought to welcome all influences that will have a tendency to break up tribal reservations and reservation life. Consequently nonreservation schools, in taking Indians from reservations and bringing them within the influence of white civilization, letting them feel the influence of white civilization, leading many of them to yearn for this white civilization—that is, to get away from the reservations and become to all intents and purposes citizens of the United States like the rest of us—must in due time exert upon the Indians on the reservations a salutary pressure in the right direction.

At any rate this problem needs much unbiassed study, careful collection of facts, and deliberate sifting of these. At present many exaggerated statements are put out on the scantiest foundations of facts. This tendency should be consistently discountenanced by the true friends of Indians and of Indian education, and by all who are laboring to free our nation from this great curse of the Indian reservation. Every agency should be employed that will remove the Indian man from the tribes into homes, so that the power of the reservation, with its tutelary influence upon the Indian, separating him from the white, may be steadily lessened.

On the other hand, I ask you to give to the Indian Office every support that you can possibly give it, every help that it is in your power to give it, in its efforts to bring Indians in all the border States into the ordinary American public district schools. In this direction the office is engaged in a very interesting experiment. It is proposed in some of the States to colonize Indians in the existing white public schools. There is considerable prospect of success in this. It is proposed to make, in Minnesota, an educational boarding house—not a school—in the midst of the cul-

tivated, prosperous, thrifty white community, and to send the Indians to board in this boarding house and to attend the public schools of this town. The citizens are perfectly willing; they propose to charge the Government no more than they would charge other nonresident pupils. The schools of the town are far advanced, they have an excellent manual training department, and much attention is paid to industrial training. It is hoped that by this experiment much good may come in time.

With regard to the present movement for doing away with contract schools, may I be permitted to say a word. Of course I am in favor of having the contract system, which is a constant source of dissension, changed; but on the other hand, it must be acknowledged that the contract schools have done and are doing a great deal of good in educating the Indians. In very many respects they have advantages over the Government schools which it would be difficult to supply. And not the least weighty of these is the fact that the contract school is more at liberty to develop the religious instinct than is the Government school. I hold that the development of the religious instinct is fundamental in education, and it is probably one of the most difficult problems to meet and solve, how to supply the Indians in Indian schools with some measure of religious training or the development of the religious instinct without offense to the various denominations that are interested in this phase of the work. Yet the advantages to accrue to our work from the transfer of the contract schools to the Government are so great that I think it is proper to do this. However, I do not admire the method proposed by Congress of killing the contract schools by inches—reducing them 20 per cent a year. Before the fifth 20 per cent shall be removed the schools will die by inanition. It is a false way. As long as they are allowed to exist they should be strongly and warmly supported. If there is to be a 20 per cent reduction it must not be applied to the schools in such a way that certain contracts may be wholly abandoned, but that full support may continue to be given to those with which contracts are still continued.

President GATES. How is it being applied in the Department?

Mr. HAILMANN. It has not been applied yet, because it is not yet the law.

I think the precedent established by the school of the Unitarians, their transfer to the Government, offers a most excellent precedent. The plan is to place at the disposal of the Government the continuance of the school. The Government purchases, if it sees fit to do so, the equipment of the school, and engages to continue that school on the same plan and with the same pupils and teachers and the same employees so long as they are competent for the work. In this way there will be merely a transfer of the control of the school; the school would remain as it is; the Indians would not suffer; we should still have a school for the Indians there. In the other case, where we take out of these schools 20 per cent of the scholars, what shall be done with them? Either it becomes necessary to establish a new Government school to put with this school or to remove these children to some other agency, away from the surroundings in which they should have been brought up, so that there are evil consequences. A similar proposition to that of the Unitarians has been made by one of the schools in New Mexico, which I hope will be accepted. But to discontinue the contract school without at the same time, either by the transfer of the schools or the erection of new schools, providing educational facilities for the children would be, I think, pernicious.

I am more and more impressed, as I study my work, with the great difficulty that comes to the schools by a sort of reaction when the students, boys and girls, leave the schools and return into practical life under conditions that are poorly calculated to give them an opportunity for properly using their educational advancement. They are given an education in the schools, they go back among the Indians, and they have few facilities for making use of their educational development. Their friends do not see that there is much value to be attached to this school education, and they lose confidence in it. People around them do the same, and designing men use this as an argument against the extension of school facilities to the Indians.

It seems to me one of the chief works of the friends of the Indian and missionary societies would be to provide facilities for returned Indian youth to make use of what they have learned at the schools; facilities for work; for pursuits in which they can use the things they have learned at the school; facilities on the reservation or among the white people in their respective States. All this should be done; and it can be done much better by these societies than by the Government. It is a natural task for missionary societies, especially if the schools are to come wholly under Government control.

During my late visit to the Cherokee Reservation I was impressed with the desirability of such a movement. There are many who, if they could have small loans of money given to them to buy a plow or a couple of steers, could lift themselves into comparative affluence and pay back the money in a short time. Surely that would be a beneficent work for philanthropic men and women.

The desirability of bringing the white population and the white schools of Oklahoma, South Dakota, and Minnesota to take an active interest in putting Indians into

the public schools is manifest. I find in some schools that a great proportion of the children are practically white, not Indians. They are the children of white fathers, who in many instances are well to do and who could easily send them to public schools. They prefer to send them to Government schools, because then the children are supplied with clothing and food. In some cases really deserving Indians, with a higher grade of Indian blood in their veins, are kept out of such schools for lack of room in the dormitories. All such cases would be removed if the Indian school and public school could come more nearly together than they now do.

Since the time when I entered into my present office we have been engaged in establishing the office chiefly. We have not yet had an opportunity to do aggressive work in the way in which we ought to do it. I have been compelled by surrounding conditions to do largely defensive work on every hand. Fortunately at present, with the help of Providence and the Secretary of the Interior, the superintendent of Indian schools has his work made as easy as possible, so far as the Indian Office is concerned. But there are hindrances upon hindrances in other directions; he is hampered by things that it seems can not be removed except by Congress. Congress could do it, and Congress is the servant of the people, and you who represent the people should take the deepest interest in this matter and free the hands of the superintendent of Indian schools, so that he may be enabled to do aggressive work.

Here is an instance: the superintendent has had given to him for the fiscal year 1895 a thousand dollars to travel over this vast continent from time to time, inspecting schools. That appropriation was exhausted by the 1st of December, so that henceforth he is tied to his seat in Washington, unless Congress sees fit to add to the appropriation a sum which can enable him to inspect the schools. This parsimony is unworthy of our great nation. If a work is to be done at all it should be done well; and those who are charged with the responsibility of this work should not have their hands tied by such paltry considerations as the inability to travel from Washington to St. Paul.

Dr. RYDER. In the passing of these schools over to Government there is always the practical objection that many of them have been built with money pledged to carry on religious work. We have no right to surrender it. Then, again, I remember Dr. Hailmann suggesting that ultimately the schools should all be made over to State control. How will the Government pass them over?

Dr. HAILMANN. In the States where it is possible, as in Minnesota, Wisconsin, and South Dakota, it would probably be well for the Government to pass the care of the Indians over to the State, and have the education of the Indians cared for by the States. But while this is desirable, and while I should exert myself to the utmost to bring this more and more fully to the front, I may say that it is still so far from us that we can postpone the consideration of the method of transfer. Yet such transfer is desirable.

I hold that the most desirable thing would be for the Indian Rights Association, or other societies, to establish in the various States branches or committees who should exert themselves to convince the State authorities that the control of the Indians within the borders of their States is one of the responsibilities of the State, and to urge upon the legislatures of those States the necessity of demanding of the Government that all persons within their borders should be transferred to their control. Yet, while it seems to me just and equitable that State control of Indians should become established, I do not think this should be forced upon the States. Each State should first be brought to see that it is neglecting its duty in not caring for the Indians. It should be aroused to a realization of this, and stimulated to demand of the General Government full restitution of the right to manage its own affairs with reference to Indians as well as with reference to all other inhabitants of the State.

Capt. WM. H. CLAPP. Mr. Chairman, ladies and gentlemen: I fear that my ideas may clash with the ideas of others who have spoken.

President GATES. There is nothing we welcome more than a variety of ideas. We like to hear both sides.

Captain CLAPP. I recognize the efforts of the Christian people of the country to elevate and Christianize the Indian races, and only fear that in some respects they have taken hold of the subject by the wrong end. It seems to me that while the old adage "Cleanliness is next to godliness" is true, I may be permitted to suggest it is next before it. It goes first. Right and proper living, with some observance of the decencies of life, must precede the knowledge of doctrinal points. Something has been said about the impiety of the pious; that has led me to think of the cruelty of those whose hearts are full of pity and kindness to humanity. That cruelty lies in returning children to the reservation after they have been educated away from it. I know and acknowledge the great work that my friend Captain Pratt, whom I have known for twenty years, is doing. He has gathered together probably thousands of children, and taken them more quickly into civilization than has been done in any

other school. But just there comes in the cruelty of this tender-hearted plan. It is true that the children can be better educated when taken away from the tribal reservation; but the home-coming is the hard part.

A bright young girl comes back, with her pitiful trunk full of clothing, perhaps with a jaunty hat and a smart dress on, and she finds the old shack on the reservation in the same bad condition that it was. There is nothing that she can do; in a little while her clothes become dilapidated, and she goes down and back and is soon a squaw among squaws. With all their enthusiasm and all their desire to do something, the return is discouraging to the boy or girl. Suppose the daughter of a Kansas farmer, living on the prairie, raised in the discomforts peculiar to a rough, wild life, should be taken to New York and taught all the elegancies of civilization, in a home where she had all the comforts which belong to the highest civilization, and should be kept there until she had become a young woman of 18, and then returned to the Kansas farm where she would have to go for the cows, to wait upon the farm hands, and to go through the daily drudgery of life there? What would the life in New York be to her but a bitter memory? How would she in any way be benefited by having that experience, or by being taught to enjoy things that she can never enjoy afterward? It seems to me these students, educated in the East, might be absorbed into our population; for we absorb everything, we are omnivorous. I think Captain Pratt is the originator of that idea.

My objection to nonreservation schools was, first, that so few students came back; and secondly, that others did come back. That is the way I feel about it. I think sometimes we overdo the mere book part of our education for these people. They should get the more practical things of life; they should know how to make their homes brighter and to surround them with more comforts. A great deal is said about industrial training, but what does it amount to? Too often it means that the Indian boy is taught to work a machine. In old times a boy learned his trade from the bottom up; now the machine does the largest part. If a boy has learned harness making, it does not mean that he can take a side of leather and make a harness of it; or if he has learned shoemaking, he has not learned to take the leather and cut and make a whole shoe. Then, even if they have learned trades, they come off empty handed. There is nothing to do, and there is nothing to do it with; and even if they could make articles, there is no one to buy them.

I believe that there are many objections to the reservation plan; it must be looked on as a temporary scheme. My idea is that these Indians should be gradually thrown more and more on their own resources. When you have taught these people to make their homes more comfortable, and to know more than they do now about sanitary measures, when we can take them away from some of their old habits, then will come the time when they can profitably hear of Christianity and all the various things connected with that. I have been intimately associated with Indians for twenty years, and I know them very well. I have been at the agency where I am now over a year and a half, and my ideas have only been confirmed by closer association with them.

There is one other thing that I may refer to. It seems to me that the fathers of the church, in long-ago days when Christianity first took possession of the earth, were extremely wise in one thing they did. They took the old heathen festivals and gala occasions and gave them a new meaning—not destroying the enjoyment of the people, but putting a new meaning into their anniversaries, so that many festivals that are apparently Christian are really of heathen origin. In the same way, it seems to me that it is impossible to stop all kinds of dances among the Indians; it seems to me it is feasible to change the current and direction of these things. There is no one thing to which the Indian is more wedded than the desire to be continually dancing. I appeal to Captain Pratt if that is not so.

Captain PRATT. It is a part of their religion.

Captain CLAPP. We have a regulation issued by the Indian Office which prevents the most innocent form of dancing. I think it would be wise to consider whether such innocent recreation, properly countenanced and encouraged, might not be an excellent substitute for the old dancing. I do not suppose there is one here who will agree with me on that subject; but I want to say also that there is no one in this room who desires the welfare of the Indian more strongly than I, or who more wishes to benefit and help them on the way to civilization and Christianity.

The following resolution, offered by Dr. Lyman Abbott, was unanimously adopted:

Resolved, That the chairman of this conference, with four others to be appointed by him, be constituted a committee to wait upon the President, Secretary of the Interior, the Commissioner of Indian Affairs, and the Indian Committee of the House, or either of them, in their discretion, and present to them the views of this conference, and especially to confer with them respecting plans for realizing the ideal presented by the Secretary of the Interior in his report—the development of a competent, permanent, nonpartisan Indian service."

President GATES. We can not let our friend leave without expressing our con-

viction that there is but one serious trouble with our Army just now, and that is that it is breeding a race of orators. I want also to tell him that we start with cleanliness as next to godliness, and if our missionaries are failing to inculcate cleanliness, I hope they will see to it. But I think, if they were going to get a man onto a higher plane of living, if they were going to make that man honest, they would begin by getting the spirit of God into his heart.

Two suggestions have been made to us. I agree as to the need of law and education in the Indian Territory; but when it is suggested to us that we must take these Indians and keep them apart from the white man until they are fit to take up land, I am reminded of the question, "How are you going to teach your children to swim without any water?" They must begin with land in severalty; they must become accustomed to managing land by managing it.

Captain PRATT. I think if Captain Clapp and I were to talk things over we should find that we are not so very far apart.

The problem to me has been a problem of adjustment, not to longer continue the increasing of the complicated plan of trying to adjust our civilization to the Indians, but to begin at once and get them to adjust themselves to our civilization. I look upon the United States as a country to be entirely covered by our civilization with all uncivilized spots and people eliminated. The problem is to adjust every man in the United States to the civilization that we feel should be universal here.

People of all sorts, civilized and uncivilized, have come across the ocean to our shores. They generally reach us with barely money enough to bring them, and are thus compelled to stay. Many of them, if they had money, would soon go back because of radical difference in conditions, but not having the means they are compelled to stay until used to it; and then it turns out that it is no hardship, for they agreeably wake up to a great deal more importance and prosperity than they ever would have had at home.

I have felt for a long time that the Indian was simply one of those people. By some means he should be brought into our civilization, held there, and made to become a part of it; and until he does get permanently into our civilization and becomes a very part of it he is a problem on our hands. All of our past tribal building illustrates this. We have the best product of our attempt at tribal building in the cases of the Cherokees and other of the so-called Five Civilized Tribes, and Major Kidd has here told us the sad results of that venture. If we can adjust the Indians to our civilization as quickly as we do all others, and my experience is that we can, so much the better for them and the Government. If annually hundreds of thousands of other alien people can be made to adjust themselves to our civilization, why not follow the same lines and in the course of a very few years get our 250,000 Indians adjusted to it?

My friend, Captain Clapp, and I have had many similar experiences, but I have had some that he has not had, and I know from my experience that an American Indian can comfortably adjust himself to our American civilization in short order, if the full influences of that civilization are brought to bear upon him.

Twenty years ago I took some of the hardest Kiowa, Comanche, Cheyenne, and Arapahoe murderous savages to Florida, and in three years they learned to work and to use the English language and so adjusted themselves to the condition of things there that they desired and requested to be allowed to stay. I want to emphasize that—they appealed to the authorities to be allowed to stay in Florida. They said, "If you will send us our women and children, we will stay here and take care of ourselves." Yet many of these were old men, and among the worst Indians we had three years before. Three years, only think of it! In that time they had accepted the dress of the whites, had become industrious in doing the things which the other people around them did, and did them well, and they had learned that it was better for them to stay there than to go back to the prison reservation and idleness. But they were denied the privilege and had to return to their reservations. To me that was a great lesson.

The Indian children, of course, adjust themselves to civilization more quickly than grown people, but grown Indians can and will fully yield to the forces that environ them. I believe that every dollar of Government money spent in building up the reservations, and thus holding the Indians together as tribes, is a dollar mispent. I believe the duty of the Government to itself and its wards requires that every dollar it spends for this people should be to pull them individually away from the tribal condition and into the United States, and not in trying to make things a little better on the reservation, which all our experience shows only compacts, builds up, and strengthens the tribe. Government money should only be spent in such a way as to make the Indians individual and citizen. I do not see why an Indian can not own land and be in Washington or elsewhere just as well as a member of Congress. If he is to have property rights, why should not an Indian be allowed to lease his land when he has not the adaptability to use it? Why compel all Indians to farm when some are not adapted to farming, but are well adapted to succeed in

some other industry? Why should the Government manipulate the Indian and his land estate so as to make the Indian a helpless slave to a degraded environment? It does just this when it enacts laws which practically compel every Indian to stay on his land and so remain in his tribe. Every tribe is imperious and yet more or less leeching on and dependent upon the United States for the maintenance of its autonomy. It practically captures all means, influences, and even supervision sent to it and assimilates and utilizes them for its perpetuity.

Even our Indian agents and missionaries once within the tribal circle soon become a part of it. Tribalism is Cahensleyism. Ecclesiasticism, seeking its own extension, realizes this, and hence its scheming and clamor against any break in tribal autonomy. What better illustration of the tribal magnetism than that presented by the Indian agents now here in the city? Each at the head of an empire tribe is unable to resist its power, and so requests only such means and added authority as will enable him to build up his tribe. He is ready to pass none over into the United States. The question naturally arises whether, in justice to itself, the Government ought not to at once entirely abandon all this expensive espionage, so inimical to the Government and also to the individuality of its wards thus only the more helplessly swamped in the tribe. By such abandonment, in many ways the whole problem of Indian civilization would be greatly simplified and that, too, in the best interests of the Indian himself. The facts are that sooner or later the Indian must inevitably part with his expensive picturesque exclusiveness and join us, or pass out. Nursing his identity kills and is hopeless; merging and losing it in the nation is hopeful and the only hope.

These things can not be discussed in a few minutes, and I shall be glad when our conferences are sufficiently prolonged to allow all our ideas to grapple and become worked out. From year to year we come together for only one day, and the great diversity of opinions is not enough allowed to boil down to substance.

A great deal is said about returned students. Captain Clapp has made a statement, borne out in a very few instances by the truth, but they are rather the exception than the rule, and to me such instances do not at all augur the ill so generally alleged any more than in white schools. I never attempt to contradict anyone who says that there are cases of that kind. But sometimes a mistake is made. A girl left Carlisle after graduation last year. Her graduating paper was about the difficulties of the returned student. She called it "Put yourself in my place." It was a good, true picture. She was a Kiowa. She went home; her mother lived in a tepee and she went to her. She had not seen her mother for eight years. She had come from the tepee to Carlisle, and she went back to the tepee from Carlisle. She stayed there less than two weeks, and she wrote back that she did not take off her clothes to sleep during that time—that she was afraid to. After that she succeeded in getting a place in one of the Government reservation schools near, where she has been employed ever since with credit to herself and her Carlisle training. A writer in the Baptist Standard, of Chicago, inspired by a missionary, drew a picture of that girl's return that was a flagrant misrepresentation. He said that when she saw her mother in her Indian dress and realized that she must go back to the tepee, she sat down and cried bitterly, and her mother was so angry that she tore off of her every bit of clothing and gave her only a blanket and kept her in the tepee, and compelled her to return to the condition she was in before she went to Carlisle, and there she still remains. There was no truth in it.

Twenty odd years ago Big Tree, Satank, and Satanta were prisoners under my care at Fort Sill. Big Tree and Satanta were taken to Texas, tried, and sentenced to be hanged, but the sentences were commuted to life imprisonment. Their people and their agent made such appeals that they were released on promise of good behavior and returned to the reservation. After two years, both having violated their pledges, they were caught and again in our hands as prisoners and sent back to Texas. Satanta committed suicide in prison, but Big Tree was again set free. Lately he became a Baptist, and, so to speak, was immersed in progressive conditions. He preaches in their meetings. When Mrs. Pratt and I were at Anadarko in October we found that Big Tree and the missionary were off in Kansas, Iowa, and Nebraska on a missionary tour. The night before we left Anadarko, Big Tree and the missionary returned. Big Tree had on a very clerical suit. I had been talking strongly to the chiefs about violating their treaties in holding back their children from school. Big Tree came and gave me quite a lecture about it, claiming, as the chiefs have for the last twenty-five years, that the Government should not be in a hurry. The next morning Big Tree came to the store where we were and then he had on nothing but a shirt, an old, dirty unbleached muslin sheet, a pair of leggins made of muslin, and moccasins. His face was painted and he was to all outside appearances the same old Big Tree again. The missionary, who was off in the States campaigning with Big Tree, was the same man who fabricated the story about our Martha Napawat in order to belittle Government Indian Schools.

Major CLAPP. My point is this, that this translation into a civilized man is a slow,

gradual process, and that the civilizing influences must come first. I hold that these nonreservation schools, of which Carlisle is at the head, are the best possible way of civilizing and Christianizing an Indian boy or girl, provided that they are not to be sent back to the reservation. In the cases which go back, except in rare instances, your kindness in educating them is in vain.

ADDRESS OF MAJOR M'LOUGHLIN, INSPECTOR OF AGENCIES.

Mr. Chairman, I am a friend to both reservation and nonreservation schools. I have had many pupils returned from Eastern schools who have done excellent work. I have never had any from Carlisle, but I have had them from Hampton and from the Indiana, Illinois, and Minnesota schools. In very many instances their health was impaired by residence in the East for a length of time. There are few opportunities at a reservation for an educated boy or girl.

(Here Major McLoughlin read a letter from the superintendent, a lady, of one of the Western schools.)

I would like to speak a little about the adult Indian. Ten years ago I began at Standing Rock Agency. None of the Indians wore the dress of civilized life. To-day, in passing over the reservation, it is difficult to find a single instance of an Indian with long hair, or wearing a blanket, and the women wear what they call with pride "skirts gathered in at the waist." I believe in agriculture being a great civilizer; it helps to build up the home, it brings chickens, cows, swine, and domestic creatures about them—these things that belong around country homes. A man who has charge of these can not go off for days at a time; he has to stay at home to take care of them. We have had no rain on our reservation since last April, but we have an excellent nutritious grass, hardly suitable for mowing, but good for the cattle, and for four or five years we have worked on that line; but this year it has been very dry. I require every Indian to cultivate some land; he must plant a small patch, and this keeps him interested in his home surroundings. They can raise corn, potatoes, garden vegetables, and they are making very commendable efforts in this direction. They have done better than most of the whites around us. Owing to the drought the whites are leaving. For the last three years we have had no harvests. I have encouraged the cattle industry, for the Indians derive several benefits from it. We have tried to break up the life of the nomad Indian. Although they have not taken up allotments, they are prepared for it, because there are hardly any three living on the same quarter section. We have one section with forty families on it, but they are gradually taking up land, and are now scattered, some 40 miles in one direction, some 80 in another.

While we are doing what we can for the adults, the schools are also doing good work with the young. We try to induce our educated Indians to marry. Our day schools are doing excellent work; I am a great believer in day schools. We have four day schools. The child is in school several hours a day, gets a touch of civilization, and the lessons he learns there he carries home, so that his parents are, through him, brought into contact with civilization.

The following committee was announced to wait upon the President: Dr. Lyman Abbott, Mr. Phillip C. Garrett, Mrs. A. S. Quinton, Gen. John Eaton, and Mr. Roberts.

The Secretary of the Interior, Hon. Hoke Smith, was invited to address the conference.

ADDRESS OF THE SECRETARY OF THE INTERIOR.

MR. CHAIRMAN, LADIES AND GENTLEMEN: It gives me pleasure to meet you, for I appreciate fully the efforts of this board and the help it and the other benevolent institutions render to the Interior Department in the management of the Indian service. I desire that the most cordial relations may continue between the Bureau, the Department, the commissioners, and the associations which are endeavoring to help our national wards and to bring them to a standard of intelligence and civilization fit for citizenship.

You will pardon, however, my expressing the hope that your patience will not be lost if at times those charged with actual responsibility are unwilling to embrace all the sentimental views that may be presented by those who are not required to do the practical work, but are left to the far more enjoyable side of theory, where the privilege exists of being controlled entirely by the heart, without the burden of everyday responsibility. While all of your suggestions can not be followed, it would be unwise in the administration to therefore disregard those that are serviceable, and it would be unwise in you to cease presenting your views because some of them are rejected.

The good people outside of the service have done much to purify the work of those in the service, and to remove scandals from it. I trust that labor of this character is now but little needed. The line of most effective assistance which can be rendered is that which will help to make the service permanent, which will

eliminate politics from the work of those engaged in the service, and will prevent changes for any cause except the hope of increased efficiency. I believe, to-day, that the most important advance which can be made will be that which will guarantee the permanent tenure of those whose work proves successful. In no line of employment is change so injurious as where great length of time is required before proficiency can exist, and this is certainly true where the service is to reach a people still almost half savage.

I admit frankly that at the commencement of the present administration changes were made too rapidly among the agents. This was due to the fact chiefly that charges poured in against the occupants of these places and the Department yielded to the opinion created by these charges, that the agents were not efficient. I wish here to go upon record with the statement that my experience has convinced me that it is scarcely possible for a man to be a good agent without bringing upon himself a great number of false accusations.

There are two lines of employment connected with the service which I desire to mention.

First, the teachers. The classified service applies to them, and there is no difficulty about their continued tenure of office.

Second, the agents. I regard the agent as the most important instrumentality for the development of the Indians. A thoroughly capable man continued for a long time as an agent is a guaranty that the Indians under him will make progress in civilization and efficient labor, and toward American citizenship. A capable agent will require good work by every one upon the reservation, including the Indians. His will is almost law, his leadership is, most of the time, free from control. No place furnishes a greater opportunity for effective service, and with each year of continued tenure of office the value of the service infinitely increases. No man should be placed upon an Indian reservation as an agent who does not intend to remain on his reservation as long as a reservation is required. He should look for no change except by promotion in the same service.

It is unwise to place under the classified service an office simply because a good man is in it, and because his retention is needed. In extending the classified service it should always be considered whether the right man can be selected through that service. It would be impossible to furnish tests by mere technical examinations by which Indian agents could be selected. Permanent tenure of the office of Indian agent must depend largely upon the high sense of duty entertained by those charged with the management of Indian affairs. I sincerely hope that the present administration may set an example of regarding nothing in the selection of Indian agents, or in the continuation of those now in office, except fitness for the places which they fill. By following this course I hope not only to help the service for the present, but to impress an example upon those on whom responsibility hereafter may devolve.

It is to you and the different associations that I turn to urge a careful inspection of the work now being done by agents. If sure of the facts, condemn or praise without reserve. Your organizations will continue through successive administrations, and you are in a position to help render the tenure of office permanent to every occupant who does his duty, and to help terminate at once the tenure of every agent who has failed to do his duty.

Of course these views apply chiefly to the civilian agent. As to the army officers, we have been met with the difficulty which has grown out of the fact that an army officer, so soon as he has made a good record at an agency, feels, usually, that he has done his share of frontier work and that some one else ought to take his place. We have a number of army officers who are making excellent agents. It is hard upon them to be removed from their commands and with their families to be assigned to a post almost devoid of those social surroundings that add so much to life.

I have recommended that the law applicable to the pay of an Indian agent be changed so that the Department shall have the right to give one-half the salary fixed for the agency to the army officer who may be assigned to the work. I believe that the passage of this recommendation by Congress will greatly aid the Department, both in obtaining and retaining the most capable officers and those best suited to this work. A thoroughly efficient and trained Indian agent can save his salary many times over to the Government each year, besides rendering infinitely more useful work than a raw man or an ordinary man. It is in the line of wise economy to pay the agent well, thereby making him wish to remain permanently in the service, with all of his zeal and energy aroused in its behalf.

You, and those interested as you are, must largely create the public sentiment which will bring from Congress liberal legislation of the character mentioned, and bring from future administrations recognition of genuine merit in the service, and therefore I cordially ask your active assistance.

President GATES. These words are most welcome to us all. They give us assurance for the future, so far as one secretary can control the future. For years we have

been pressing for continuance in the office of the agent, but no sooner do we get one secretary and president in favor of it than their successors come in and the work is overturned. If this Administration does what it can it will be easy to hold in position the men who are doing good work. I shall now ask Commissioner Browning to speak to us.

ADDRESS OF COMMISSIONER BROWNING.

MR. CHAIRMAN, LADIES AND GENTLEMEN: I have been greatly interested in the remarks made by Captain Pratt, Major Clapp, and others. My report, recently issued, shows the work that has been done the past year by the Indian Bureau and our plans for the future.

My work during the past year has been arduous but pleasant, and I have received the hearty cooperation of the friends of the Indian in all my attempts for his improvement.

The Secretary of the Interior has paid special attention to Indian matters, and his interest in them has been very gratifying to me. I believe progress has been made and is being made, and when I return to my law business at the end of my term of office, if we shall not have made progress on the lines laid out by the Secretary of the Interior, then I shall have spent four years without fruit and made a failure, because my only purpose is the advancement of Indian civilization. Cases are constantly arising where I must disappoint or oppose those who have some special project on hand. A question of that kind forced itself on me the other day. I had to reply, "I know that your friends want this thing done, but it is not in the interest of the Indians, and I must stand for the interest of the Indians." The result was I made a report in opposition to what was asked. I like the work, and if I can succeed in leaving the position that I fill with a showing that labor has been done for the benefit of the Indians I shall be satisfied.

PRESIDENT GATES. We appreciate the interest shown in the work by the presence here of the honorable Secretary of the Interior and the Commissioner of Indian Affairs, and we understand that the courtesy of the occasion does not require them to answer any question that we may ask unless they are so disposed. We have considered in this conference of the secretaries of missionary societies the future of the contract schools. There has been an impression growing that the contract schools must very soon cease, and I think this conference is disposed to acquiesce in a policy that will wind them up. We notice that the appropriation bill suggests that the amount to be expended for contract schools shall decrease by 20 per cent each year. If the Secretary of the Interior or the Commissioners feels free to give some indication of how that is to apply we shall feel more intelligently able to advise our friends in Congress.

COMMISSIONER BROWNING. In making the contracts for the present year after conferring with the Secretary of the Interior, I concluded that a reduction of 20 per cent could be made in expenditures for contract schools. We did not reduce the number of pupils attending each school, but wherever there was a school that could be entirely dispensed with, without depriving the pupils of school opportunities, the contract was taken away. If by extra effort the children could be put into public schools or Government schools, that was considered ground for refusing to provide for them in a contract school. Or if we could take 10 children out of a contract school, which had say 50 pupils, and put them into a Government school we would make the contract for 40 only, instead of 50. There were only two schools that we declined to make a contract with, one at Avoca, Minn., and one at Albuquerque. From the others we took away a certain number of pupils. We found that we could thus reduce contract school expenditures about 20 per cent, and that reduction was made before any report was made to Congress on the subject.

In making the report to Congress it was suggested that contract schools might be done away with entirely if an appropriation of over a million dollars were made to provide buildings, etc., for pupils now cared for in contract schools, but it would take at least a year or a year and a half to erect such buildings, and we recommended rather that reductions should go on as we had begun this year, so that in four or five years the contract schools would be entirely eliminated. That was the report made and I understand that it was incorporated in the bill, providing that there should be a reduction of 20 per cent annually until the contract schools should be done away with.

Major Powell was then introduced.

MAJOR POWELL. Mr. Chairman, I have listened with great pleasure and instruction to the speakers who have come from the practical work of the reservation. As you call on me for a word, permit me to express some ideas that have floated through my mind while listening to these gentlemen.

You are attempting to lift savages into civilization. That is the simplest statement that I can make of it. They are savages. You are attempting to lift them from

that lower condition to a higher life. To do that it becomes necessary to appreciate that this must be done not on one line but on all lines of human activity. The differences of opinion which have been expressed—if you will pardon me for so commenting on the words of others—have shown that the speakers were all right in the affirmations and wrong in their negations. Let me make this statement clear.

All human activities can be relegated to five logical categories: First, men engage in activities for welfare—to obtain the food, clothing, shelter, and comfort, for health and prosperity in life; they engage in activities of pleasure, in the athletic sports and intellectual games of idle hours; they engage in speech, in the expression of their ideas, one to another; they engage in institutional activities or arts for the regulation of conduct; they have their own opinions and receive the opinions of their fellows and inculcate those opinions to others. These, then, are the activities of life. Now, when the gentlemen say you must civilize them by reforming their opinions and giving them a true theology and pure religion, they speak well, but they have told only a part of the story. If you would reform their opinions you must at the same time reform their institutions; if you would reform their institutions you must reform their speech, their language; if you would reform their language you must reform their pleasures; if you would reform their pleasures you must reform their industries.

To elevate men in culture it is necessary to change all of their activities, industries, pleasures, languages, institutions, and opinions. The five coordinate systems of activity are so interrelated that one can not be changed without changing all the rest. You can not civilize their industries without civilizing their pleasures; you can not civilize their pleasures without civilizing their speech; you can not civilize their speech without civilizing their institutions; you can not civilize their institutions without civilizing their ideas. Every department of human culture must be influenced and reformed.

In their industries the tribes of the United States were hunters and fishermen. They gathered seeds, fruits, and roots, and the most of them cultivated the soil for corn, squashes, and tobacco. Thus they led a rude life with rude tools. The first thing to be done is to give them civilized industries with all its tools and machinery; then all their weird, savage, and demoralizing games and ceremonies must be reformed, for they have a profound influence upon the minds of the people, they being full of superstition and cruelties.

At the same time it is necessary to reform their language, for they can not be taught civilized industries and civilized pleasures without the use of civilized speech, and the task is great. They speak hundreds of different languages. The old languages can not be reformed, but they must be replaced by a tongue of civilization. You can not change their industries, their pleasures, and their language without at the same time changing their institutions, for they are organized peoples. They have forms of government and they have well established traditional laws, and all of their industries, and all of their pleasures, and all of their speech are coined into institutions of great tenacity. They do not believe in the ownership of property in severalty, but in the ownership of property by clan and tribe. They believe that superior age gives superior authority. They believe that there are two coordinate departments of government—civil government and religious government—and that the two are wonderfully interlocked.

Now, all of these institutions must be changed if they are to be given civilization. Then they believe in sorcery, and they worship animals and, to some extent, the powers of nature; and all their opinions must be reformed. Thus it is that to civilize the savage tribes there must be a modification of all of their activities, their industries, pleasures, languages, institutions, and philosophies. Any change made in one of these lines has its effect upon all others, and any endeavor to change in one direction meets with the resistance which arises from all the others, and coordinate development can be accomplished only by properly understanding all of the conditions and all of the influences that affect the status of culture in which the tribes are found.

The task is not one in which ignorant men can successfully engage. It needs trained men and able men; able by reason of their knowledge, able by reason of their skill in influencing men, and able by reason of their imposing characters. It is not the task of children; it is not the task of hired laborers securing employment; it is not the task of the tools of political partisanship, but it is the task of men trained for the purpose, trained in a knowledge of the ways of savage life, wise to direct primitive minds on the great highways of civilization. What has been said by the honorable Secretary of the Interior and by other gentlemen interested in the administration of Indian affairs, and by others interested in this council about a permanent and skilled administration of Indian affairs is pertinent and wise and suggests the true solution of the Indian problem. For a hundred years our method of treating Indians, as formulated in statutes, have been good, but to carry out the statutory provisions wise men permanently engaged in the service are necessary.

If you could appreciate the enormous task involved in civilizing all these tribes you would see that it would be a failure to depend only upon changing their notions of religion and Christianizing them and on trying to change their barbaric and weird ceremonies. You would see failure in attempting only to educate them by changing their language; in like manner it would be a failure to depend solely upon changing their institutions, enforcing new governments upon them. Failure lies in the sole attempt to change their barbaric pleasures, and failure must inhere in the sole change of industries. All of this change must be made, and simultaneously; that they may react upon one another you must lift them bodily through all departments of human culture.

Major Wright, Indian agent at Rosebud Agency, was asked to speak.

Major WRIGHT. I feel, Mr. Chairman, that no one here is more interested in this work than I am. I have spent twelve years of what I consider the best part of my life in this work, and in that time I have had to work pretty hard. Many people in the East, who had never seen a reservation, know but little of the annoyances, troubles, hardships, and the weary work that an agent has to contend with. I have had many men visit my agency who told me that I was foolish to spend the time and force that I do. I feel, however, that having been honored by the President with a reappointment, my efforts have been appreciated.

I speak only of the reservation. I know nothing of Eastern schools, but I know what can be done on reservations. When I went to Rosebud in 1882 the Indians of that agency were not more than 5 or 6 miles away from the agency. There was not more than one in two hundred who wore anything but a blanket. There was no school there. They had nothing. To-day I have not an Indian who lives within 5 miles, and my farthest camp is 100 miles away. I have 21 Government day schools, 1 Episcopal and 2 Catholic schools. I have 12,000 head of cattle. The Indians are able to do anything that is required in the way of agriculture, although three out of four years there is no harvest. Every year, however, they are required to do something, if it is only to cultivate a half acre of ground, or else they have to spend a week at the agency woodpile. The reservation schools are all day schools.

As to the Indians and the manner in which they are treated. The Rosebud Indians are part of the great Sioux race. There are about 4,260 of them there. They get rations under treaty. They are getting about two-fifths of the treaty rations because 1,800 took part in the Pine Ridge troubles. One of the causes of that trouble was said to be that they were giving short rations, and it was considered necessary to increase their rations to the full treaty amount, against the protest of the agent in charge.

Many of these Indians remained at Pine Ridge—about a thousand men. They did not want to come home, and they were allowed to remain. The result is that these Indians have been put back at least ten years. The agent at Pine Ridge can do nothing with those Indians. They will not build houses. Why? Because they were allowed to dictate the terms on which they would come in, which I consider the greatest mistake in dealing with Indians. My experience has been that if an Indian knows that he is wrong, and you can show him that, he will never make any trouble. I have had Indians come to me knocking, pounding to come in to ransack the office and do away with the agent and the land office generally, but where we had the argument on our side I have never yet failed to subdue any turbulent Indian. At one time four of them were arrested after considerable trouble. Some got badly hurt, and I got an injury myself, but they were finally landed in the guardhouse. That was in 1890, before the trouble, when they were getting uneasy. After they had been in the guardhouse and the leader was put in solitary confinement for six weeks, on bread and water, his spirit was broken and he is one of the best Indians now on the reservation. Experience has proved time and again that if Indians are allowed to dictate the terms on which they will come in they will be troublesome. I speak only from experience at Rosebud, because I have never seen any other agency, except Pine Ridge.

In 1883 there were no schools. My father was agent four years and he built ten. I have built eleven more. I contend that as a foundation of the work of education these day schools can not be excelled. My schools are at the camps, and from twenty-five to forty children attend. They are required to attend every day. If they are not there within half an hour in the morning the policeman goes and brings them in. Hence as the children must be in school the Indian family can not leave that camp. They can not rove about, which is the chief characteristic of the Indian. He has got to remain at home so that his children can go to school.

After you have allotted an Indian you can begin to civilize him—not much before. Heretofore the adult Indian has been overlooked too much. If the Indian children could be brought from the reservation and educated in such Indian schools as Carlisle, and kept here in the East, no better solution of the Indian problem could be made. But can it be done? Is it being done? Is it practical? If not, then why pursue that policy? I doubt if it ever will be done. I contend that the Indians

have got to be educated and civilized where they are, and any man who will go out there and see their condition will agree with me.

A great deal of criticism has been made of the day schools on the reservation, but I want to go on record as saying that those who have made the most criticism have never seen them. Dr. Dorchester, when he first came to my agency, severely condemned them. I asked him to go out and see them. He did so, and when he came back he could not have made a stronger report in favor of them. The children are as neat in their appearance as in country schools anywhere. The children are required to be clad and to be clean and have their hair cut. The schools take civilization out where the Indian can not get away from it. Nothing can occur without the agent knowing it, because everything is reported by the teachers and the police.

The children in the school are required to "speak up." They recite from the far end of the room, with the teacher at the other end, and the consequence is that they learn to speak. At noon they can not go home and I give them a lunch of hard bread and coffee. This fall I have adopted the plan of baking a part of the bread and giving them this at noon, the bread-baking being done by the older girls under the supervision of the teachers, and the good of this is that it becomes known in the camp.

Two years ago, at the time of the trouble, there was no trouble where the Indians were scattered and where there were day schools. The trouble always occurs where they live in idleness and grouped together.

The influence of these schools on the people, the carrying home of what the child learns in the school, is excellent. The girls are all taught sewing and cleanliness first. In organizing a school, for the first two or three months we have a liberal supply of bath tubs, and the girls are properly cared for. After a reasonable time they learn that they must keep that care up themselves, but they are required to do it at home. We are more strict with the boys, but they are required to bathe at home from the start. The result of the children taking these civilizing influences home every day has its influence on the home and on the camp. The homes are greatly improved. They also learn to do washing at home, for the children can not come neat every day otherwise.

In connection with that we have field matron work, women who go from house to house and show the Indian women how to do general housework. The trouble is we have not enough of them.

President GATES. The conference has expressed itself strongly as wishing that there might be a large increase of field matrons. How many ought you to have?

Major WRIGHT. I could use five; we have two. It is a new departure. If we had more we could do far better. We also need additional farmers. We have had no rain since April, and they have raised nothing at all, but we persevere and next year we hope to do better. Every Indian is required to do something. When you keep an Indian occupied you keep him out of mischief. You have got to educate the people up to that line.

In the work of allotment I have made about five hundred during this last year, and scattered the Indians out. The question is, When they shall have taken their allotments, what about their citizenship? That question is being discussed and whether some provision shall be made whereby that citizenship shall be eliminated from the allotment act. They are not prepared for citizenship, a large majority of them. As soon as you break up these camps and get the Indians away from large groups, then you can begin to progress.

We have at present in school about 800 children. There are about 300 not in school, who can not be accommodated because they are in small camps. If there were a large industrial school, they could be placed there. I hope that can be accomplished. It seems to me sometimes that this educational work is carried too far in the way of book learning. The law requires that an Indian shall go to school till he is 18. One boy wanted to quit school because he was 19. I wanted him to continue because he was doing pretty well. He said yes, he could talk English very well, but "What good does it do me?" Well, now, that was the point exactly. What good does it do if he has no industry that he can follow on the reservation? If this boarding school could be established and made entirely industrial, they could learn English in connection with the work and I feel that a great step forward would be made.

In connection with the day schools we have little shops where two half days in the week the pupils make anything they can under the superintendence of the teacher and take it home with them. I have a little garden where they are taught to raise vegetables. Each boy has his plot of ground and what he raises he takes home. We have a sewing class once a week for Indian women and the girls are required to do their own sewing. As they leave the school the teacher keeps watch over them and sees that they behave, and when they are married they are required to be married by some of the missionaries, and any boy who goes away with a girl is brought to the agent. If there is no objection to his being married to her, he is

properly married. If he has another woman, he is severely punished. No man is allowed to marry till he has a house and a team of horses, or something to work with. I think these things will convince any one who is interested that the money spent on a reservation is not wasted.

Mr. Standing, of the Carlisle school, has seen a school under my management. Before that he was very severe in his criticism of such schools. After he came back he said, "If they are all like that, I will say they are the best reservation schools I ever saw, and they are run on the same plan as our school at Carlisle, only on a smaller scale."

Under the treaties with the Indians large quantities of wagons and harnesses are sent out. By establishing an industrial school there I see no reason why the materials for these things could not be sent to the school and let the older boys make them. If we can not pay them wages, we can pay in the articles they make. We must have industries on the reservation that will help the people along.

At my subissue stations, of which I have six, I have little shops, but I am only allowed to pay boys \$10 a month. I allow them to charge for certain work for the people, such as setting wagon tires or repairing implements. All the work done for the Indians they are required to pay for. It makes them take better care of what they have. If an Indian finds he can come into the agency and get a new wagon every time he breaks his own, he will not take care of what he has. But if he finds he has to pay for repairs, he will be more careful, so as to make his repairs as little as possible. All that has to be taught the Indian. These boys in that way often make \$30 or \$40 a month.

The girls are required to dress properly after leaving school, and this reacts on the whole people. When you consider the condition of any tribe of Indians, it is necessary to consider what they were and what they are, to see whether anything has been accomplished or not, and I contend that the Sioux of the Rosebud Agency in these twelve years will demonstrate to anyone who goes among them that they are advancing. I paid them \$49,000 for cattle last year. I bought 1,000,000 pounds. I do not allow any Indian to kill an animal. If they kill an animal, they are punished.

When the cattle are issued, they are issued with the Government brand and an individual brand and they are all made a matter of record. Each farmer is required to see that his cattle are all right. I require every Indian to look after his cattle and know where they are all the time. The first winter I lost some. They got poor and died. They are required now to go out every day and look after them. The Indians can not kill them, with the police all over the country, without its being known. They must show their 5 or 10 or 20 head of cattle, and if they can not they are sent to me, and if they do not explain they are confined until they can. And if they are found to have killed any, they are confined for thirty days. I have had but two cases. They see the benefits of raising cattle and are taking an interest in it.

Up to two or three years ago it was customary to issue cattle on the hoof. The manner was this: Consolidations of 30 Indians were made. Each man was allowed 3 pounds of beef a day, and the issues were made once in fifteen days. The head man of these 30 people was called and an animal was led out. The men were all mounted, and as the steer was led out the Indians would take after it and shoot it. It was a cruel thing, no doubt, to be chasing the animals in that manner, and it would take three or four shots before it would be killed. They were wild cattle and it took a pretty good pony to catch them. After killing, it was divided among these 30 people. That was severely condemned, and it was an improper method. But at that time we could not make all these changes and issue things properly. We finally established subissue stations. I had corrals made and slaughtered the cattle there and issued the beef. It created a great deal of opposition, because all these innovations and changes incur the opposition of the old chiefs, who in former days influenced the people largely. At last I erected slaughter houses, and for the past year I have issued from the block. At some places they still kill the animal and issue the carcass, but every Indian gets his own share in the way we do it.

General EATON. Is any permanent official record kept of marriages?

Major WRIGHT. Yes; when they come in to get married they are given a license or permit. They take that to the missionary, and when he has performed the marriage it is returned to the office and is made a matter of record.

President GATES. I have never heard a more interesting or clearer statement of the work of an agent in the eight years I have been connected with this work.

Mrs. CAROLINE H. DALL. I want to say one word. When a great battle is going on it is not the soldiers in the field, not even the officers who command, who can see the issue. It is much more likely to be the correspondents of the papers on the neighboring hills. I have been a correspondent on the hill while the military contests have been going on this afternoon. My friend, Captain Pratt, has not done himself justice in meeting the objections of the opposite party. He has always, whenever it has been possible, placed pupils graduating from his school in the midst of the white people, and employed them in trade, and sent his young women into domes-

tic service. It is also true of the Cherokee Reservation in North Carolina that the pupils often go directly into service in the neighboring States, and they make excellent servants. That ought to be credited to the Eastern schools. The reservation school may be better than the nonreservation school, but if so, it is because it has a better teacher. If the nonreservation school succeeds it is because a master like General Armstrong or Captain Pratt is at the head of it.

In reference to higher education, I have not much experience in later years, but I have had experience formerly in reference to negro schools, and I know what is done there, and I have sometimes felt the danger of higher education. In my last visit to Atlanta I found young men and women of 18 who had been for seven or eight years studying drawing and designing. They had been taught gratuitously by a lady of fortune from Chicago; taught to design wall papers and tiles. They were grateful for it, but I felt in the atmosphere that they did not understand what they were to do with this instruction. They would never make tiles nor design papers. When it came my turn to speak to them I said, You do not know what this will do for you, but you boys learning to be carpenters and cabinet makers will be a great deal better cabinetmakers because you have been taught to make a tile in exact proportion, and you girls going into service will set your tables more neatly, make your beds more prettily, and set your tables more attractively for the same reason. After the school was over about twenty of the girls and boys came to me and thanked me. A boy of 17 said, "What you said gave me much pleasure. I had been afraid I was wasting my time." The highest education helps the lowest uses.

Adjourned at 5.30 p. m.

EVENING SESSION.

The evening session was called to order at 8 o'clock by the chairman in the parlors of the Ebbitt House. The first speaker was the Hon. Charles H. Mansur, Assistant Comptroller of the Treasury.

ADDRESS OF HON. CHARLES H. MANSUR.

MR. CHAIRMAN, LADIES AND GENTLEMEN: The burning question of the day, so far as the Indian is concerned, is the situation in the Indian Territory and in Oklahoma. It is a little odd that the final culmination of the Indian question is apparently to be wrought out in the very center of the continent. The talk for a century was, that we were continually driving the Indian westward from our Eastern seaboard. Now, we have him corralled and rounded up in the center of the continent, and there it is that this most important domestic question for the Government is to be solved.

The estimate has been made for a century past that there were probably 250,000 Indians in the area of the United States when America was discovered. The first census of the United States gave that number, and nearly every census since has placed it at similar figures. We have paid \$400,000,000 as a nation in fighting the Indian, and now the days of his warfare are over, as it is not likely that any more wars of consequence with him will ever occur. Our progress in civilizing the Indian has been very commendable for the past fifteen years. In 1878 Congress, for the first time, appropriated money—\$20,000—for the education of the Indian. In ten years thereafter we ran our annual appropriation for that purpose up to \$1,000,000, and have maintained it for the last five or six years at that amount or over.

We ourselves have made great progress in solving the Indian question, and I for one believe the time has come in which all the various bodies of Christian people interested in the question should combine and bring their influence to bear on the Federal Government, and demand that instead of appropriating \$1,200,000, as we are now doing for educating about 22,000 Indian children, that the appropriation should at once be increased to \$2,000,000, which will be amply sufficient to educate every Indian child of school age on the continent.

There are only about 37,000 or 38,000 of them in all, 15,000 more than we are educating. In one generation, by educating continuously the entire body of children of school age, we shall solve the whole Indian problem for all practical purposes. This has been my feeling for several years, and I feel sure that in the long run it is the best practical solution of the matter, and can be done within the short period of one generation. It is cheaper to educate the Indian than it is to fight him.

PRESIDENT GATES. We are delighted to have a conservative officer of the Treasury express himself in this way. We have been asking for just that thing for a long time.

Mr. MANSUR. Senator Dawes knows that this is no new thought with me. From the time of the colonies through the Continental war, and down to 1871, the Federal Government made treaties with each Indian tribe as if it were a separate nation. In 1871 Congress passed an act declaring thereafter no treaties should be made with any Indian tribe, and the policy ever since has been that whenever the Government enters into an agreement or a contract with any Indian tribe or nation, that the honor of the Government is not pledged beyond the extent that if we do the tribe any damage we shall compensate it under our contract or agreement for the damage done, the same as if we were treating with a body of white people.

A great defect in the Federal laws hitherto has been the want of an enactment to determine when an Indian ceases to be an Indian, and is ready for American citizenship. The first effort of that kind was in the Dawes allotment bill, passed in 1886. I think that law was a good one in many respects, but the allotment law ought to be amended so as to prevent the Indians hereafter from taking their allotments together. Under the Dawes bill they have done this hitherto. Not more than one Indian should be permitted to take his allotment in any one section. They should be scattered around amongst their white neighbors. There are certain locations in the Indian Territory where the Indians practically have taken all their allotments together; so that speaking of one township, for instance, their lands being exempt from taxation for twenty-five years, there will be no funds available for schoolhouses, roads, bridges, or other township improvement of any kind.

To state the case is to show the necessity for a change. The Indian should be mixed up with the white population. On the border there is very little feeling of caste between the whites and the Indians which we know is so prevalent between the whites and the colored people. The Indian is, and always has been, a free man. He may have been bloodthirsty and cruel, but always a free man, and the whites from the beginning of the civilization of this country have intermarried with the Indians with comparatively little prejudice created by such relation.

Now, as to the Five Civilized Tribes in the Indian Territory. There are two ways to treat the situation. One is to declare that our treaties made with those Indians in 1828, 1833, and 1835, supplemented by the treaties of 1841 and 1866, are no longer to be regarded as binding, and for the Federal Government, in the interest of all concerned, both white as well as Indian, by an act of Congress, give them a Territorial form of government. Our Supreme Court has decided that an act of Congress at any time can overturn and annul a treaty. Western feeling for long years has been that our friends in the East believe that our plighted faith expressed in those treaties must be kept. The Indian urges this as his best, if not his only argument. He continually appeals to our pride and honor that the early treaties made with the Five Civilized Tribes shall be honored and perpetuated, regardless of the different situation existing in their country to-day from that which existed when those treaties were made. This, in fact, is the only argument the delegates from that region urge upon Congress.

I was a member of the Fiftieth, Fifty-first, and Fifty-second Congresses, and I can speak from personal experience of the situation here in Washington during the past eight years. In the fight for the opening of Oklahoma Territory, and since then, and the laws passed for its government, I have from time to time seen dozens and dozens of delegates from the so-called Five Civilized Tribes in attendance upon the sessions of Congress here at Washington. Nearly all of them were white men. White Indians! A mockery in terms; and I assert that, as a general rule, to which there has been scarcely an exception, that the whiter the Indian the more intolerant he was in his argument, and he was always opposed to the white man and the Federal Government. I assert that it is as much a mental impossibility as it is a physical possibility for an educated white man to be an Indian—that is to say, an educated white man can not be an Indian and a white man at the same time; and I say regretfully, that as a rule the thinner and more diluted the Indian blood, the more capable they become of deceit, and when it runs down to one-sixteenth, one sixty-fourth, or one one-hundred-and-twenty-eighth, he can deceive the very elect.

In the fall of 1889 I was one of six members of Congress visiting the Indian Territory, and at Muskogee, Miss Alice Robertson, with a view to showing the progress made in civilizing the Indian, brought before us half a dozen young ladies with the statement, "Here are three Indian and three white girls; pick out those who are of white blood," and not one of us could do it. We picked out the Indians every time.

I have another remedy. It may not be so quick in its operation as a Territorial government, and the declaration that the treaties are at an end, but it will solve the question. For six years I made a study of the treaties of the Indian Territory. I visited the Territory three or four different times, and made speeches through that country and in the towns on the Texas and Kansas borders. I then took the ground that the Indians had violated their treaties continually from the start, because their original demand was that the whites should be excluded from their Territory and not permitted to come in. In other words, their demand was for Indian isolation.

Let us look at this for a moment. When they were moved from east of the Mississippi to their homes in the Indian Territory they were put in the southwest corner of the United States. South of them was Texas, a foreign land; west, Mexico, also a foreign land. Since then we have acquired Texas, absorbed half of Mexico, and surrounded the Indian Territory with five or six millions of white people, and in the last decade or two the railroad has transversed the Territory in half a dozen different directions. The Indians have secured a taste of the sweets of civilization. They became discontented with their condition of isolation. Unwilling to work themselves, and desiring the comforts and luxuries that the white man enjoys, of their own accord they broke down the treaty bars and invited the whites into their Territory.

For twenty-five years all the treaties with the Indians have been broken on both sides, disregarded alike by Indian and white man. The whites predominate in the Territory 5 to 1—250,000 white men and 50,000 Indians. If it be true, as the Indian declares, that the treaties are still in force, and that the Government can not destroy them without violating the pledged faith of the United States, then we can do this one thing, and we have a right to do it, and there is nothing in the law of the white man to prevent. We can regulate the status of the Indian and of the white man. We can declare what it takes to constitute an Indian and what a white man. We can draw the line, and can take from the white man his masquerade garb as an Indian and compel him to come out and stand his share and lot with us as white men. These white Indians may plead that we are injuring them, but the plea will fall before the bar of public opinion, flat and without effect. Whenever we, as a nation, take a man who claims to belong to an inferior race, and lift him to the plane of our own political rights, and declare through a law of Congress our intent to elevate him to the plane of American citizenship, and give to him every privilege that the law confers upon myself or any other white man, I for one insist that I do that man no injury. On the contrary, I confer upon him the greatest political blessing known to modern times. This is the remedy I propose, that Congress shall enact a law as follows:

Resolved, That from and after the passage of this act any member in whom the white blood predominates of any Indian tribe or nation in the Indian Territory or in the Territory of Oklahoma, shall be taken and considered a white person, and as such be entitled to and invested with all the privileges and franchises of a citizen of the United States, and henceforth be ineligible to vote or hold any office of honor, trust, or profit in any Indian tribe or nation whatever: *Provided*, That all those who become citizens of the United States under the provisions of this act shall not forfeit or lose any right of property or interest therein, whether by purchase or inheritance in right of descent through their Indian blood.

After some discussion, this resolution was laid on the table.

What would be the effect of this resolution? Every so-called white Indian, in whom the white blood predominates, would be as mad as a hornet. Of course, they would declare they are ruined, and that they do not want to be made American citizens. I have heard that kind of talk frequently in the Indian Territory. I have very often heard white boys 12 or 15 years of age, perfectly white, tell other white gentlemen as well as myself that they were better than Americans; did not want to be Americans, and when asked to give their reasons, stated that the Government paid them head money; that they did not have to work, and, therefore, were better than the Americans. But let me say to this audience that six months after the passage of that law, Othello's occupation being gone and the white Indians unable to masquerade any longer, unable to vote or to hold office, they would be compelled to turn around and take part with the white man in favor of statehood, citizenship, and all the blessings that follow in their wake. They could not escape it.

Major KIDD. I would like to ask Mr. Mansur if he has examined the bill which provides for the division of land among the Indians?

Mr. MANSUR. No; I have not, but I believe you would do a good work if you indorse this resolution which is coming up in Congress to-morrow.

President GATES. At first reading this strikes me as a dynamite pulverizer in its effect.

Rev. H. B. Turner was asked to report for the Hampton school.

Mr. TURNER. The work at Hampton goes on encouragingly. We feel the presence of the General. His spirit seems to pervade everything at Hampton. It inspires and vitalizes everything. Under the efficient leadership of Dr. Frissell the work has gone on without break, and the plans which were in the mind of the founder are being developed to-day. It has been my privilege to make two visits to the West, in North and South Dakota, and in Nebraska, with a threefold object. First, I wanted to select students for our institute; second, to visit the homes of our graduates and students and to see just what they are doing with what Hampton has given to them—to see whether they are an uplifting force in their communities; and then I wanted to visit the homes from which the students come, because I can get nearer to the boys at Hampton when I have been at their homes and know their fathers

and mothers and home surroundings. I also wanted to find out what trades these boys that come to Hampton can use to the best advantage on their reservations. We have twenty trades taught there and it is important that the boys go into the right shops, that they may learn what will be of use to them on their return to the reservations.

I have found in going after students that the feeling is growing that they do not want to let the little children come to schools in the East. On one reservation I met twenty-eight young people who wanted to come to Hampton. Of these sixteen were over age, for we can not take them over 18. They wanted to come because they wanted the industrial education, and they also wanted a higher education than they could get on the reservation. They had been through the schools there. The first trip I made I found after we started that five young men were over age and I was obliged to have the conductor stop the train, and these young men were sent back. Two of them had sold their ponies and gotten rid of all their effects to come to Hampton. Last year I had permission to bring those from 18 to 24.

I was glad to find our returned students doing such good work. In one place four young men were carrying on a Bible class and doing missionary work among the old and sick and poor. We do work of that kind at Hampton, having a large missionary band who do volunteer work. One time two Indians came to me and said, "We can not preach, but we can saw wood," and they did saw wood where it was needed that winter. At Crow Creek I found a Hampton association of young men banded together to look after returned students, and that association has been of great value. At the time of the death of General Armstrong these young men got together and held a memorial service and each young man rose and gave the sentence which the General had uttered during their stay at Hampton which had made the most impression on their lives. This work ought to be encouraged.

I found many of our young men filling responsible positions on the various reservations, but I was sorry to hear many say, "There is no work for us." I wondered if it would be possible to have industrial works built where these boys when they come out of Eastern schools could apply their trade. It is a tremendous temptation when they are exposed to the vices of idleness and the discouragement of having nothing to do, when they have once learned a trade. Dr. Treon is trying to stimulate the men to be industrious farmers by putting up a great flour mill, but heretofore the Government has distributed flour by the bag or barrel. He has induced a thrifty spirit among the people.

I have been gratified to see how loyal our students are to Christian civilization. We have sent 400 back to the West, and only about 10 per cent have proved disappointing, and we think that is a good record.

Mrs. Quinton was then asked to speak.

Mrs. A. S. QUINTON. It would be unnatural for me to say a word on Indian work without making reference to our society. Our last annual convention, which took place in New Haven, was one of the largest and best we have ever had, and our workers were full of spirit and interest. A good deal was said about our paper. It has served also as a petition. We sent 600 copies to Congress during the discussion on the appropriation bill. It is a matter of courtesy for a Congressman to look at such things. Our educational work has been small, because Government, properly, has undertaken that. We have one school in upper California, where our little day school has blossomed out into a boarding school for 40 boarders and 40 day scholars. We do mission work in connection with that and our other schools. Not long ago the Indians there at Greenville announced that they would have an old-time dance, and our superintendent protested, but with no effect, apparently; so he took a procession of the children and, singing hymns, they marched to the place appointed. The Indians gathered and sat down; the children sang, and the teacher explained the truth of the gospels, and as he spoke the Indians murmured, "Good talk, good talk." The dance did not take place, and has not since been proposed. Another thing I must mention. The wife of one of the leading Christian Indians there died, and the Indians insisted that the old-time customs should be observed. But a Christian funeral service was held, and the whole influence was greatly for civilization and Christian faith.

We have an excellent force of workers, including our lady physicians and teachers. I believe we could to-day fill ten new stations with excellent, first-class workers if the means were at hand. The work of the field matrons is most influential, too, and I wish there could be one for every tribe in the country. There could be if there were an appropriation of \$50,000, and I believe the Christian voters of the country could easily secure that appropriation.

We have a mission among the Moquis of Arizona, and there is a scheme of colonization for these Indians, and there is no reason why, if Superintendent Collins can be returned to that field, he can not secure a colony as large as Mr. Seger's. We were thrilled by hearing Dr. Ryder say that missionary work has increased this year, in spite of the diminished appropriations and the changes that have been made, and

that the work is increasing spiritually, and in the number of earnest Christian Indian workers. We were sure that would be the result, for I believe it has always been so in such cases. We were interested in the story of "Porcupine Hash," the last pagan worshiper in his camp, and in his devotion to what he believed to be right. Throughout the country there are efforts going on that will win such souls, and we should be only patient and hopeful and give to such sympathy and the Christian love which wins.

The efficiency of pictures by the use of the stereopticon has been spoken of. They are excellent means of preaching. We have used pictures of the life of Christ in this way, and they have been very helpful. The Indians will sit for two hours in a meeting where they can have the pictures to look at, with occasionally a brief prayer, or address or hymn, while tears often run down their so-called wooden faces. Oh, they are not wooden, but as human as any others.

I was very much interested in all said here about the old-time festivals, which should be converted into or displaced by Christian and patriotic festivals. The Fourth of July has been celebrated at some of our stations, and it was wonderful to see how the people entered into the spirit of it. I was among the 2,000 Piegians when they saw the first skyrockets on their first Fourth of July, and it was interesting to watch their faces. I believe in the scheme of one young Indian who turned even a ball club into a Y. M. C. A.

Another point should be mentioned. Field matrons, as a rule, have a poor place to do their work in. A room with a cellar under it, or a dry and cool place for milk, the room above furnished with shelves, table, chairs, and a cooking stove, would be very inexpensive, and would make it possible to do the work of the field matron much better. All friends of the Indian should see that money enough is appropriated to do this efficient work. It is a glorious thing that the Secretary of the Interior has said that we can have a nonpartisan Indian service and has pledged himself to help in that direction, and staying workers insure better facilities.

The Navajoes are crying for education as well as for food. Why can not both be provided? There are so many needs that call for quick and earnest work. There ought to be a permanent Government body of workers to see that these things are accomplished.

We women have opened directly or indirectly, during the last eleven years, thirty-five different mission stations, and thirty more would supply the pagans of our country. These can be provided if Christians will give us the means. We go to no tribe where there is any other Christian mission.

The chairman announced that Dr. Roberts would take the place of Dr. Ryder on the business committee, as he was unable to serve.

Dr. Lyman Abbott reported from the business committee.

Dr. ABBOTT. The matter of protecting the Indians from the evils of intemperance and the temptations of the saloon has been presented here informally, but no statement has been formulated. We have no definite proposal to make, although we consider it a very important subject.

The three following special resolutions are offered for the adoption of the conference:

Resolved, That in the work of civilizing adult Indians, field matrons are much needed, and that Congress is hereby urged to appropriate sufficient funds for the employment and equipment of field matrons for every tribe.

II. *Resolved*, That the reductions of salaries of bonded school superintendents proposed by the pending Indian appropriation bill has a tendency to cripple these schools and to reduce their efficiency and should therefore not be made.

III. *Resolved*, That the legislation proposed in the Indian appropriation bill now pending before the House of Representatives increasing existing difficulties in the transfer of children to schools off their reservations is detrimental to the true interests of the Indians and ought to be defeated.

Dr. Lyman Abbott presented the following resolutions, formulated by the business committee:

RESOLUTIONS OF THE INDIAN COMMISSIONERS.

I. *Resolved*, That it is the duty of the Federal Government to maintain at Federal expense, under Federal control, schools adequate for the secular education of all Indian children of school age not otherwise provided for.

II. That the Government ought not to throw this burden on the churches, nor to subsidize schools under church control; and now that nearly all the churches have ceased to accept subsidies from the Government, all such subsidies to church schools should cease as soon as the present contracts expire.

III. That this conference heartily indorses the position taken by the Administration that the educational work of the United States Government should be so carried on as to expedite the day when the work of public education will be remitted to the several States and Territories.

IV. That while in the secular education of all Indian children local schools are indispensable, nonreservation schools should be maintained and developed as a most efficient educational factor in assimilating the Indian with our national life, until the reservations are abolished and the Indians come into our State and Territorial public schools.

V. That we pledge our hearty support to the Secretary of the Interior in his declared purpose "to develop a competent, permanent, nonpartisan Indian service;" that we call on Congress and on the public press to cooperate with him to that end, and that we indorse the Secretary's recommendation of a bill making feasible increased compensation to army officers when appointed as Indian agents.

VI. That in view of the disclosures of the commission to the Five Civilized Tribes concerning the corruption and gross injustice in the Indian Territory, we affirm the paramount duty of the United States Government to protect the right of every resident within its national limits to life, liberty, property, and a share in the public provisions for education, and that no past compacts can exempt the nation from the fulfillment of this, its supreme obligation.

Dr. ABBOTT. I am not inclined to add anything to the resolutions which I have read. It is something for us to come together from time to time and get a clear apprehension of broad, general principles. It is also important to know how to apply those principles in the details of administration. The few minutes that I will take I shall spend in reaffirming the broad, general principles which the friends of the Indian have come almost universally to accept, and which have been formulated by the Lake Mohonk Conference, which I have often had the privilege to attend.

The first and fundamental principle is that the Indian is a man, and is to be treated like a man; that there is not to be one method of treatment for red men, another for yellow men, another for black men, and another for white men, but all are to be treated on the same broad, general principles.

The reservation system is not a system that would work well with any men. We do not take the Poles, nor the Hungarians, nor the Italians, nor the Swedes and put them into lots by themselves and fence them around and prevent civilization from coming to them. We do not shut them up in a 10-acre or a 500-acre lot, but we let them take their part in the play of life. Some get drunk, some fight, some shoot each other, some engage in strikes, but on the whole the Italian, and the Turk, and the Russian, and the Pole, and the Hungarian make progress in the play and attrition of American life. We hold that the reservation system is utterly and irredeemably bad, because it violates this fundamental principle that freedom is the condition of human development, and puts a fence around one class of men and imagines they can grow wiser and better without freedom. We hold that the best way to prepare the Indians for civilization is to throw them into the strife and struggle for existence. For over one hundred years we have had Indians in the civilized State of New York on a reservation, and they are to-day hardly more civilized than they were a hundred years ago, and I do not believe that they will be civilized a hundred years from now.

Acting on that principle we hold, secondly, that the general American system of education must be applied to the Indian race—not the same methods in detail, but the same essential principles. We hold, therefore, that there must be a public-school system for the Indian race as well as for the white race and for the negro race. And certainly the burden of maintaining that system for the Indians ought not to be thrown on the particular localities where the Indians happen to be. Certainly it ought not to be thrown on the churches. It belongs to the nation, and the nation does not fulfill its duty, nor approximately fulfill it, by saying, "If you will educate them we will give you \$1 for every \$10 that you spend on behalf of the Indians." We stand against the subsidizing of church schools by the State, not primarily on the ground that it makes a union of church and state; not primarily on the ground that it is bad for the churches to be driven to logrolling to get the biggest share, but on the ground that it is the prime duty of the people of this nation, who have taken the lands of the Indian and made themselves rich with the wealth that once was roamed over by the Indians—it is their duty to provide for the secular education of those Indians in all that is necessary for manhood. Even if the churches could undertake the work, it is the duty of the Government and not of the church.

Third. We hold that this is a transition period. It will take time, since the Indians have been fenced around, to take that fence down and put them in with the rest of the population, and it must be done with the least possible friction. It will take time to bring the Indians into the public-school system, but it must be done. Meanwhile, something must be done to prepare for that time when the Indian child will sit side by side with the white children, and the Indian children will have the same provision made for them that is made for other children. For we hold that the Indian children must have the same sort of education as we demand for our own. We are not satisfied with purely local schools for ourselves. We recognize the fact that the local school is a necessity, and hence local schools exist. But it is a good plan to send a boy away

from home to a boarding school and to college. So we stand for the nonreservation school as a most efficient factor in the organization of the school system, as well for the Indian as for the white. We must have for them the highest and broadest system of education. Education can not be broad and can not be high if it is confined to special localities.

There is one other thing that we contend for. I am told that there are a great many people who are not ready to accept this principle; but they will accept it sooner or later. Colonel Kidd told us to-day something about the condition of affairs in the Indian Territory. Ex-Senator Dawes told us something about it at Mohonk last fall. I say it is a disgrace to the name of America that such things should exist on American soil and in American territory. I insist that it is the first and paramount duty of this great American people to see to it that from north to south and from east to west there is no territory over which the American flag flies where the right to life and liberty and property are not adequately protected. If our fathers made any treaties in the past—I do not say they did—to forbid us from protecting life, liberty, and property, we can not unmake those treaties too soon. I remember an old book in which the story is told of a king who promised he would give his dancing daughter what she wanted; and when she said promptly, "I want the head of John the Baptist in a charger," he was sorry he had made that treaty, but he thought he must keep it. But that promise would have been better broken than kept. So if this nation has made a promise which keeps it from performing its paramount duty, this fundamental and paramount duty must take precedence.

It is the right of any nation to give notice that a treaty is abrogated, and that it will live up to it no longer. That is a recognized principle. If the Civilized Tribes are a foreign nation and we have made a treaty with them which prevents our fulfilling our national obligations, we have a right to give notice that we abrogate that treaty. If they are not a foreign nation, if they are part of our nation, then the treaty is a law of the United States extending over them, and we have the right and it is our duty to abrogate that law if it is working practical injustice, and to provide such new laws as may be necessary to protect the people in that Territory. If there be a great territory under the flag of the nation, belonging to the nation, in which a man can not advocate allotment of territory without being muzzled, without standing where "the lightning shines behind a tree," it is a disgrace to American civilization, and our first duty is to blot out that disgrace.

Now the questions come up: How will you abolish the reservation? How will you organize your school system so that it shall become a part of the State and Territorial system? How will you annul these contracts with the churches so as to do the least injustice and wrong? How will you right the wrongs inflicted upon the Five Civilized Tribes? How will you accomplish all this? These are questions for the greatest administrative skill, and they are not questions for this conference to decide. These matters must be left to such light and guidance as come to the Commissioner, to the Secretary of the Interior, to the Administration, and to Congress. When you have done wrong it is never easy to turn round and do right. Repentance is always hard, and you can not usually repent without hurting yourselves and hurting somebody else. But we have done wrong, and our first duty is to repent and do works meet for repentance, cost what it may.

ADDRESS OF SENATOR DAWES.

Mr. CHAIRMAN: I have been exceedingly gratified at many features of the discussion here to-day, about the best means of making the Indians self-supporting citizens of the United States. Every speaker has had a method of his own, and what is the most encouraging thing is that his is the best method, only let him not think that his is the only method. Of all our methods there will be a survival of the fittest, and the work will certainly be accomplished. Let us keep in mind what the purpose is, and what the end is, citizenship of the whole United States, and not of any particular locality; not to lead the Indian to get along as he can upon the old reservation, the fence of which has been taken down; not to confine our operations to bringing him up there and keeping him isolated and away from the rest of the people of the United States, just as if the fence were still up. As I look back I can see that a great many mistakes have been made, and one of those was in believing that you could civilize the Indian by isolating him.

The great mistake in the beginning in the Indian Territory was the attempt of the United States to isolate those five tribes, to keep the white men away from them, and keep them away from the white man. The end will be accomplished most effectually when you bring the Indian, at as many points as possible, into contact with the civilization of the United States. Every effort at keeping him away retards the progress. Civilization is not taught by books, it is not a fixed science; it is taken by absorption.

My associate has already spoken of the condition of things in the Indian Territory, and I need only allude to it.

A committee of the Senate went down to that Territory last spring while we were there, and came back and made a report that ought to have awakened the serious attention of both Houses of Congress. They never dreamed of such a state of things, they said. I never dreamed of it. I believed that these Indians were set apart, away from all white civilization, and were permitted to work out a civilization of their own. The white people were to be kept out. That was all on paper. So it may still seem to the man who goes through on the railroad, or to the newspaper man who goes down to Tahlequah or Muscogee, and then goes back to Philadelphia and writes an account of it. It appears on the surface as if they had a civilization of a rare character. But the truth has not half been told.

Captain Pratt, who has lived there; Captain Wotherspoon, who has been there; other officers of the Army whose duty has stationed them there, agree to the description which this commission has given of the actual condition of things, and say, We have not told the half of it. My friend, Dr. Abbott, has been elaborating the argument that, though we were bound by treaty to leave it so, yet, because it is a bad treaty, we are at liberty to break it. That is true of a bad treaty, if we can make compensation. We are bound by no treaty to leave things as they are in the Indian Territory. We are under no obligation to leave them so an hour, and never agreed to. But the highest obligation resting upon this Government is to put an end to the present condition of things. What did we bind ourselves to do? We bound ourselves to put these people upon a tract of land and keep them there all by themselves, and keep everybody else off. And they bound themselves to hold that land for the common use of each and every Indian, so that each and every Indian should have an equal common share, and share alike in every acre of it. They went to work afterward deliberately and broke every one of their obligations; and we went to work and broke every one of ours. There is not an executory stipulation of the treaty on either side that has not been disregarded and broken. They deliberately invited into their territory 250,000 white men. They invited railroads to build through their territory. They passed a law that a white man, though he have no other motive than greed, might come in and marry an Indian woman and become an Indian himself. And we stood by and let them fill up their territory in this and other like ways. They have brought upon themselves such a condition of things that it is impossible for it to remain in this country of ours, and we insist upon it that it must come to an end. But they turn round and point to the treaty neither they nor we have kept. They would cry out if we tried to drive out from the territory the 250,000 white people there.

These white people have opened channels of commerce; they have built the railroads, and established trades; and the Indians could not live an hour without these white men. It is not only impossible to drive them out, but it would be utter ruin to the Indians. Twenty thousand out of the 50,000 Indians belong to the class of those who have become Indians by marriage and their children, and they have crowded the other 30,000 less intelligent out of their inheritance, so that they are poor, ignorant, and degraded to-day. You can hardly find a full-blooded Indian there who could speak the English language; I doubt whether there are any full-bloods who do not live just as they did seventy years ago, when they went there, in their tepees and huts, speaking their own language to each other. And thus they will remain.

Our commission has been there and has collected information, and laid this condition of things before the Government. They have done their duty and executed their commission, and now it is for the Government of the United States to say whether murder and crime shall run riot through this territory, whether the real Indian shall be deprived of his heritage, whether lives and property shall be rendered unsafe, whether robberies of trains and stores shall be everyday occurrences, whether witnesses shall be shot to keep them out of the court-house, whether these crimes shall go on unpunished or not.

Suppose there was one county in northern New York with 300,000 people, constituting an independent nation, with no power in the Government of the United States to assert itself over them—an imperium in imperio. How long would such a state of things continue? How long before the United States would say, "This must pass away." Yet those 300,000 white people would be cultivated citizens like the rest of the people of New York and there would be no difficulty on that ground. But, suppose, instead, that one-third of them were savages, or suppose, if not savages, they were Indians who knew no law but the law of might. And then suppose that the county owned the land, and the 300,000 individual residents had no foothold on the soil. Do you think that such a condition of things would be tolerated an hour in the United States? That is the condition in the Indian Territory, and whenever the question comes whether they shall be compelled to conform themselves to the laws and Constitution of the United States, from whom they derive their power, they turn round and say, "When you agreed with us originally, you agreed to let us alone." And so we say to them, "You agreed to keep your doors shut; you

agreed to legislate under the Constitution of the United States." I hope Dr. Abbott will not be troubled with any idea of treaty obligation; there is no obligation resting on the United States that stands in the way of taking hold of this people and putting them upon a plane common to the rest of the people in this United States.

The real Indians are living in abject ignorance and degradation upon the hills and mountains of that country. You can not acquit yourselves by turning your attention to the Indians in the Northwest on the reservations, and discussing the question whether you will have your schools one side or the other of the reservation fence, and leaving these poor Indians in the Indian Territory, who do not know enough to know what is the matter with them, to go on in this way without doing something to prevent the wrongs, injustice, and crimes that exist in that Territory. I commend this last Indian work to you, to finish it up, and not to give over your work until every poor Indian shall be put in possession of his heritage, and be made a self-supporting citizen of the United States.

The following resolution on temperance was offered by Dr. A. I. Church:

Resolved, That in view of many grievous complaints of liquor sellers, invasion of the reservations, we do most earnestly protest against this habitual trespass on the laws which protect our wards, and we demand that the Attorney-General of the United States shall see that these laws are honestly and rigidly enforced, and that the weak be guarded against their ruthless destroyers.

The following resolution was read by Mrs. A. S. Quinton:

Resolved, That in the very recent and sudden death of President James E. Rhoads, and of the Hon. Charles C. Painter, a member of the Board of Indian Commissioners, and both officers of the Indian Rights Association, the cause of Indian civilization and elevation has lost helpers of exceptional ability, of great wisdom, and of unusual knowledge of the work in hand, and of many years of devotion to the best interests of Indians, and that while we sorrow for the loss of these most valued friends and associates in work, we shall ever be inspired by the memory of their courage, fidelity, high patriotism, and consecrated Christian character.

The resolution was seconded by Dr. Lyman Abbott, who spoke as follows:

I second the resolution, with strong appreciation of the services Professor Painter has rendered to the country, in keeping the press informed in respect to the condition of affairs among the Indians. He has been eyes for our Indian friends and Indian workers, and he has seen with that kind of clearness which belongs to the wholly disinterested nature. Dr. Rhoads brought to the Indian problems, when they were far more perplexing than now, a wonderful clearness of judgment, a rare radicalism of principle and conservatism of method. I am sure those who remember his earlier contributions to the Mohonk conferences, when we were not all of us agreed even on the fundamental questions, will now agree with me that no one man rendered greater service in bringing us together, not by any method of compromise, or vague indetermination, or double-phrased sentences, but by the method of carrying down the discussion to fundamental principles and making these clear and simple and cogent statements.

Gen. JOHN EATON. These resolutions express my own deep feeling as respecting both of these gentlemen. I knew President Rhoads especially in his educational work, and I should speak of him in the highest terms in that respect. What I have to say is with especial reference to Professor Painter. I do not know how many knew the situation of the Indian question when he first came here and began to present the initial point of voluntary outside influence against Congressional sentiment and against Congressional action. It was one of the most trying places that I ever saw a man put in. He had my deepest sympathy, and it so happened that he came very frequently to my office. I presume, in a number of years he never finally decided upon his course of action on any dubious point without coming to the office. It was outside my personal work, and it was a confidential personal relation; but it was delightful to me to see the fidelity of the man, and the wisdom and courage of the man. How many times he was assailed, but with what steadiness of purpose, what care of all interests committed to him, he stood firmly for the Indian according to the best wisdom of the time. He had my most hearty approval. Rarely have I seen a man so wise, so patient, so faithful, so unerring.

Dr. CHURCH. I want to speak a word of Mr. Painter. As a pastor in the same town with me, he went through very trying experiences. He took a poor society, without shelter or home, and at the risk of his own health and by his personal exertions left a new, beautiful church, and a united and strong society. He was a capable man, a faithful and efficient pastor.

President GATES. Nothing but an appreciation of the shortness of time could restrain me from saying a few words in memory of these dear friends. But I do think you will want to hear one who stood nearest to Professor Painter—General Whittlesey; and I want to ask him to say a word.

General WHITTLESEY. It will be only a word. Of Dr. Rhoads I will only say

that in the early sessions of this conference we relied upon him almost more than upon any other man to formulate the resolutions based upon our investigations and discussions here. He was a man of clear views, sound judgment, and earnest Christian spirit, and we always loved to hear him speak, and always read with interest whatever he wrote with regard to the Indian.

Of Mr. Painter, I hardly know how to express myself. He has been with me, sitting by my side in the same office, for years, and I have been in constant consultation with him with regard to all matters of legislation which we were urging. He has been my adviser and helper, and has grown of late years very much in my estimation as a man of experience in the work. The arrow has fallen so closely to me that I can hardly trust myself to say anything further about him. An earnest, faithful worker, loving the cause in which he was engaged, and in which he has done such good service that I am sure it will be very hard for the Indian Rights Association to find a man adequate to fill his place.

Hon. C. H. MANSUR. Having served six years on Congressional committees, and having been greatly interested in the welfare of Indian legislation, I know that no name was ever so potent or quoted so often by members of Congressional committees as the name of Mr. Painter. He exercised a great influence in that way.

President GATES. Mr. Painter was a Virginian by birth; his brothers were in the Confederate army. He was educated at Williamstown. You know something of his connection with Fisk University. He gave his heart to the work for the inferior races, and became familiar with all the details of it. No one followed out the principles more thoroughly than he did, and with an earnestness that always impressed you. He learned to restrain his natural violence of temper until it became a spring of action. He cultivated courtesy in dealing with obstinate men. He was perpetually active for good. There was a depth of Christian principle in his work. You had to know the man well to understand him.

It is not lost time to dwell on the memory of such men. In hours of discouragement we need the help of their memory. I have never seen a dark day in this reform when the memory of the unfailing patience and kindly temper of General Fisk has not come to help me; and so the memory of these men must help us to carry on their work which we must take up.

Mr. J. H. BRADFORD, of the Indian Bureau. I was rather sorry when Mr. Painter left the ministry to go into any other work. He was one of the best preachers I ever heard. When I had charge of a school of 700 or 800 children, he came and talked to my pupils, and was able to do what very few people can do, speak with acceptability to the children. He had a remarkable faculty in that way.

The resolutions were then unanimously adopted, and it was further voted to transmit the same to the friends of President Rhoads and of Professor Painter.

Adjourned at 10.40 p. m.

PROCEEDINGS OF THE BOARD OF INDIAN COMMISSISONERS AT THE
TWELFTH LAKE MOHONK INDIAN CONFERENCE.

FIRST SESSION.

WEDNESDAY, *October 10, 1894.*

The twelfth annual meeting of the Lake Mohonk Indian Conference began at the Lake Mohonk House, Ulster County, N. Y., on Wednesday, October 10, 1894, at 10 o'clock in the morning.

Prayer was offered by Bishop Whipple.

The conference was called to order by Mr. A. K. Smiley, the host, at whose invitation all the members were assembled. "It is," said Mr. Smiley, "a great satisfaction to see so many of you here, two hundred who have come expressly to attend this conference, besides one hundred and fifty guests already in the house whom we shall count as members of the conference. It is a pleasure to see so many men and women here who are veterans in the service, who have been identified with it from the beginning, and who have seen the great change wrought in the condition of the Indians. It is also pleasant to see so many new and earnest men and women coming up here to help us solve this great Indian problem. It is my great desire, as I have no doubt it is yours, to do something that shall help the Indians in the future. My object in calling you together is that we may get a variety of views. All the views that are presented are to be discussed, and at the close of the conference we shall try to arrive at some general conclusions which shall be unanimously adopted. We have accomplished this in great measure in past years, and I hope this year will prove no exception. I give you all a hearty welcome."

Mr. Smiley then nominated Hon. Merrill E. Gates as chairman of the conference. Dr. Gates was unanimously elected, and in accepting the chair, spoke as follows:

PRESIDENT'S ADDRESS.

[By Hon. Merrill E. Gates, LL. D.]

LADIES AND GENTLEMEN: Political science tells us that it is dangerous to give absolute authority to any monarch, even though he should be very good and very wise—dangerous to let him manage everything to suit himself. Mr. Smiley has a way of arranging everything here for our pleasure, and his sway is an approach to that dangerously attractive rule of the benevolent autocrat which, for the most part, lulls into placid acquiescence the well-pleased subjects. But now and then he is impelled to do an arbitrary and unwise thing (like putting me into this chair) to remind you that it is not wise to trust always to an absolute monarch, however good his intentions may be. You bear his arbitrary selection as well as you can when he thus reminds you of his autocratic power; and I thank you that you so generously help me to "make the best of it."

PROGRESS, BUT NOT YET ATTAINMENT.

I know that we have all been touched and have been prepared for our work together by the worship of the morning and by the words of our host. This has never been simply a pleasure excursion which has brought us to the summit of Mohonk, although we have found so much pleasure here, and have been reminded of a phrase of quaint old Andrew Fuller: "We serve not a God so severe but that he alloweth us sauce to our meat, and recreation with our vocation." Earnest purpose and high endeavor have characterized our meetings, even in the fairest weather and the pleasantest social surroundings. When we have met in the most glorious autumn weather, with the sun shining, we have rejoiced. And this morning, as the storm rages and the rain pours, I am reminded of a letter of Carlyle, written out of the depths of London fog and gloom, to Emerson, over seas. He says that he is terribly depressed, that for days the bleakest of winds has been blowing thick clouds about him; but in thought he rises above all the gloom, and says, "Remember, only a mile straight up, and it is clear, eternal blue all the year round." So, whatever difficulties and doubts may overlie this Indian problem, as the storm-cloud lies over us this morn-

ing, we know that if we lift up our eyes to the unchanging principles which always govern, the pure, clear sunshine of God's truth is always there, unclouded; and from the Author of Truth a light, a heat, a drawing power, ray out and insure the maintenance of the laws which hold all human affairs subject to divine order, and all the spheres of heaven in place. As friends of justice and of Christianization for the Indians, we are on the right side. And perhaps we have made as much progress in these last ten years as it is well for us to make. If we believed that this work was easy, that we could right all wrongs and accomplish all needed reforms by simply meeting here, enjoying our philanthropic "strawberries and whipped cream," we should not be fitted to do the work required of soldiers of the cross. Much that is hard remains to be done, and ought soon to be begun. But there is progress enough to keep us in good courage.

"THE UNWEARIED, UNOSTENTATIOUS, INGLORIOUS STRUGGLE."

When Lecky, the historian of European Morals, wished to single out for record "the three or four perfectly virtuous acts recorded in the history of nations," he names among them, as the crowning glory of the Anglo-Saxon race, the "unwearied, unostentatious, and inglorious struggle against slavery" which has been waged by the men and women of our blood through the centuries. We have seen something of that crusade, "unostentatious, unwearied," and for a long time "inglorious"; and we have seen something of the after-results of slavery, though we have still much to account for with the race so long enslaved in America before we can hope to regard our long account with them as settled. And so great is the number of our negro fellow-citizens, the seven millions to whom we owe a debt of helpful service, that when we meet here to deliberate about the welfare of a quarter of a million Indians, our work sometimes seems lacking in the sense of importance which attends upon planning for large numbers. While it is true that, reckoned numerically, the interests for which we work here do not concern millions of people, yet we need to be reminded that if a city of a quarter of a million inhabitants were overtaken by a conflagration, or by any great calamity which left its citizens in need of help, how quickly we should respond to appeals for aid! And the quarter of a million of Indians do not need to be set apart in a city by themselves to convince us that there are enough of them, and that they are needy enough, to call forth our sympathy. A passion for finding out what we can do to help this or that class among us has grown up in the hearts of Christian people. Many of you remember that bright young English woman who, five or six years ago, came to this country on a special mission. She had found out that our telegraph messenger boys had no society for disseminating the gospel among them, and she had come from London to undertake the especial work of forming such a mission.

Often contiguity in a city, the bond of neighborhood association, indicates for us those whom we are under especial obligation to help. But who is the Indian's neighbor? Where is the community which from motives of contiguity will be interested in him? With what kind of men is he thrown into association, when his "white neighbors" are his associates? The answer to these questions you all know. The Indians are the most friendless race among us, and they have not even that great compensating gain which the God of infinite justice and mercy has given to the recently enslaved negro race. The negro, as a result of slavery, knows how to labor. This is one good result among many bad results of generations of unrequited toil in slavery. The inherited capacity for steady industry is the better side of the results of slavery. Subjected to the hard tasks of the plantation, the slave and his descendants, as an "advantage of their disadvantages," at least know how to toil. All this discipline of toil has been denied to the "people of the restless foot and the wandering eye," as our beloved missionary, Bishop Whipple, has called the Indians. The right arm has never been taught to labor. They must be saved from their own love of idleness. The Indians are still the slaves of that liberty, uncontrolled by law, which ruins and enslaves those who fancy themselves free to follow their lowest desires. We ought to feel, we do feel, a chivalrous desire to save them from themselves. And the hope that we can be of help to them, though they be comparatively few in number, may well bind us to one another with the pleasant sense of comradeship in service. I like to think that if Mr. Howells were indeed conducting his amiable "Visitor from Altruria" through our country, and were to bring him to Mohonk this week, his benevolent and other worldly visitor would feel himself very much at home among us here, as truly at home as in any unselfish gathering to which he could be introduced.

PROGRESS WITHIN TEN YEARS.

Some things in the past we may review with pleasure. It is ten years since I first attended one of these conferences, and it is interesting to think how much has been accomplished since that time.

THE TRIBAL RELATION IS REPLACED BY THE FAMILY RELATION.

At that meeting, when any one of us dared to say that the tribal relation should be broken up, there were those who declared, almost "with tears," that we had no right to touch that sacred relation; that this tribal tie was peculiar to the Indians, was their distinguishing mark, their birthright, and that we had no right to force upon them our American ideas of the family and the state. Then we began to compare views; and by virtue of those qualities which Kidd in his *Social Evolution* reminds us are those that carry man beyond and above his brother animals—by virtue of our capacity to modify our instincts and our habits by reason, and to act at once socially and rationally—we were able to exchange views and to arrive at truth, until now you can not find any one who will defend the maintenance of the tribal relation.

THE RESERVATION SYSTEM IS DOOMED.

When some of us who were thought to be fanatics began to say that the reservation must be broken up, many others said: "No! By sacred treaty stipulations we must keep the reservations intact forever." But a careful study of the subject showed us that no people could acquire a national right in the soil, in any proper sense, whose claim was based merely on roving over the country to hunt and fish. The conviction deepened that the changes asked for were really in the interest of the Indians, and that we might safely modify the treaties if we did so in the spirit of just and kind regard for their best interests. All now see that the reservation is an unmitigated evil. We have tried in vain to mitigate its evils. It must go. It is going.

THE SEVERALTY BILL IS IN OPERATION.

You remember our first efforts to secure a bill giving land in severalty to Indians, and how hopelessly improbable seemed its passage by Congress. Yet for a long time, now, this law has been upon the statute books. The important question to-day is whether it is not being applied too rapidly, and in certain tribes with too little real regard for the welfare of the Indians. Many fear that in some reservations it is not the interest of the Indians that is considered, but the interests of the white men who want the land. Senator Dawes, who drafted that bill and carried it through Congress, warns us that we may be in danger of going too fast. At these sessions, through our workers from the field, we hope to learn what are the weak points in the law and the dangers in its execution. But the idea that seemed so hopeless ten years ago, to give a home to every Indian family, has passed into the laws of the land, because men and women have applied themselves to educating the conscience of the people. Friends who gather here have been in position to disseminate ideas, to influence and control public opinion upon this question.

We owe much to the weekly religious press, which has advocated these views, and not only to the religious press, but to the secular press, especially to the journals which have been represented at Mohonk, and to those which have indorsed or have helpfully criticised our views.

WE HAVE SCHOOLS FOR TWO-THIRDS OF ALL THE INDIAN CHILDREN.

About eight years ago, when at one of our Washington conferences we were drafting the platform, I remember proposing that we incorporate a request to Congress to provide immediately a system of schools for the Indians at the Government's expense, adequate to teach all the Indian children and youth. When this proposed resolution was brought before the conference, many said: "Let us not embody in the platform a request which may be called Quixotic. It is utterly hopeless that we should have for many years schools enough for all the Indian children. Do not ask for anything so impracticable, or Congress will do nothing." Nevertheless, we did ask for such a system. And how much nearer we have already come to attaining such a system than we dared to hope would be possible within a few years! We actually have school accommodations now provided, I suppose, for fully two-thirds of the Indian children of school age. Is that a correct statement, Dr. Dorchester?

Dr. DORCHESTER (ex superintendent of Indian schools). Just about two-thirds.

BETTER STILL, GET INDIAN CHILDREN INTO OUR PUBLIC SCHOOL SYSTEM.

President GATES. And we all hope that school accommodations will be at once provided for the remaining third. But what we desire, as a better thing than the provision of additional schools exclusively for the Indians, is the placing of the Indian children and youth in the public school system of our States and Territories, either in the West or in the East. To have a uniform school system extend over the white

children and the Indian children in the States and Territories which contain Indian reservations is the object for which we should strive. To provide in some way (by a proper use of funds held in trust for the Indians) for the necessary expenses for highways, schools, and courts of justice for those reservations where Indians have taken land in severalty is a practical measure which this conference should strongly advocate. One system of law and courts, one system of public schools, for the white citizens and the red citizens of these States is the end at which we should aim.

A VANISHING POLICY IS WHAT WE WANT FOR THE INDIAN QUESTION.

We do not want to perpetuate a distinctive Indian policy of any kind. We want to see the beginning of the end of special legislation and special administration for Indians.

As we have compared views here for the last ten years, always welcoming the clearest expression of diverging views, three stubborn facts have come to the front again and again.

THE AGENT MAKES OR MARS THE RESERVATION—CHANGES FOR POLITICAL AND PARTISAN REASONS ARE A CURSE.

1. While the Indians are in this transition stage from reservation life to intelligent citizenship, while there is an "Indian problem," the Indian agent is the key to that problem. We hope that within a few years reservation and agent may alike be things of the past. But for the present, with several tribes, the agent is an absolute necessity. Under our present laws for reservation life we find that wherever we have a good agent, a man of integrity, of moral power and of experience, we begin to see prosperity, progress, and hope on the reservation, whatever the past life there may have been. And wherever and whenever at a given agency the position of agent is filled by a weak man, a wicked man, or an incompetent partisan, a miserable henchman, the creature of the spoils system, at that reservation, however promising the progress may have been before his advent, we find that a hopeless state of affairs at once ensues. What had been gained is speedily lost. In the place of progress and hopefulness we have discontent, despair, and a relapse into savagery, if not lawless acts of outrage.

It is more evident with each year of experience that the lack of a systematic application of the approved principles of civil service reform is the great lack of our agency system. President Cleveland, in his first administration, comes into office with promises of reform. Yet, out of sixty-two or three agents, he displaces all but three, and in most cases appoints men of less experience, and frequently of no character. Of course, the work goes backward. President Harrison succeeds him with the same assurances of interest in the Indians, and the same promises of reform. Yet he makes exactly the same record, displacing all but three or four of the Indian agents during his term of office. It seems as if Providence, by this exact balancing of the number of displacements for political reasons, for what seem to be partisan reasons, under these two administrations, one of each party, had purposely arranged matters so as to enable all who believe in civil service reform to express themselves with utter freedom concerning this matter without incurring the charge of partisan bias! We find that this accursed spoils system overturns all that has been accomplished in the way of progress on the reservations. No sooner is a promising state of affairs secured under a wise agent than his displacement by a new and inexperienced man extinguishes hope and stops progress.

How are we going to put an end to this state of affairs? Let us not forget to recognize the great service which President Harrison did to the cause by extending civil-service regulations so as to cover a large number of the employees of the Indian service. And let us not forget that President Cleveland, since he began his second administration, has done us great service by still further extending these regulations. But, after all, the agent is the pivotal point on each reservation. And because agents are appointed by the President, "by and with the advice and consent of the Senate," it is sometimes said that we can not get the agents under civil-service regulations. Those of us who have had experience at Washington know how difficult it is to rescue from the grip of the spoilsmen any appointments upon which Senators or Representatives have succeeded in laying their hands to make of them personal perquisites or party capital. Miss Sparhawk has recently written a story which I have just had the pleasure of reading in manuscript, which is soon to be published, and I trust may have a wide circulation. She calls the story *Senator Intrigue and Inspector Noseby*. The dramatic scenes in which she presents the evils that attend the displacement of the good agent by the bad are not overdrawn, but can be duplicated, in fact, at reservation after reservation. I think that we ought to have from this conference such a deliverance of public opinion as shall lay most emphatically before the President of the United States his duty to make no changes in Indian

agents except where a change is necessary in order to put out inefficient and morally bad agents; and then to appoint to vacancies so made only men of approved fitness for the work, and to appoint them under the principles and in accordance with the spirit of that civil-service reform which he himself has so strongly favored. If the President of the United States will announce that hereafter he will not appoint any man to an Indian agency unless that man has first been recommended by a nonpartisan commission whom the President might name (either the United States Board of Civil Service Commissioners, or, better still, a nonpartisan committee of experienced friends of the Indians), he would do more to forward the civilization of the Indians and their fitness for citizenship than can be accomplished by any other one act which is now within his power to perform.

A GRADUAL PROCESS OF THOROUGH EDUCATION.

2. The second fact which appears with increasing clearness from year to year is that the reform we seek can be secured only by a gradual process of education. It was absolutely necessary for the inauguration of reform that we have certain laws enacted. The most important of these needed laws are already upon our statute books. But no law can make a bad man good or a savage man civilized. We hope to do in a generation or two for the Indians, by education and christianization, what a slow process of social evolution, if left to itself, would take centuries to accomplish. Many of us remember that when President McCosh, of Princeton, at our conference two or three years ago, read to us a most interesting paper upon this subject he began by saying that he felt a warm interest in this question because he was descended from a tribe of men, the wild Highlanders of Scotland, who but a few generations ago wore nearly as much paint and as little clothing as the Indian tribes which interest us here; and he had felt that what had been done for his own people by Christian missions and schools by like means he could accomplish for this inferior race, so long the "wards of the United States."

We are attempting to accomplish much in a short time. Our hope lies in a general and thorough system of education—of education for the hand and the heart as well as for the head. Such a work of education takes time and calls for patience. It demands a well-defined and an adequate policy.

SHOULD NOT INDIAN SCHOOLS BE UNDER THE COMMISSIONER OF EDUCATION?

And, when we have at the head of the system of Indian schools a competent and strong man who is equal to laying down and carrying out such a system, it should be made impossible for petty departmental clerks and political spoilsmen to fetter and cripple him at every point and to ruin his plans. We should have represented here a sufficient strength of public opinion to enable us to secure a law that would make impossible such ruinous interference with our Indian schools. For my own part, I wish that it might be possible to make the direction of our Indian schools as far as possible independent of the Indian Bureau. The business of the Commissioner of Indian Affairs is concerned so largely with the land problem and with the receipt and expenditures of moneys for Indian lands and "Indian claims" that, in the nature of things, it is difficult to secure at that Bureau such attention as is necessary to insure the greatest efficiency for a system of education which shall fit the Indian for citizenship. Is it not practicable to consider the question whether, following the precedent already made with schools in Alaska, the management of the Indian schools under the superintendent appointed for the purpose might be made more independent, and might report directly to the Commissioner of Education at Washington rather than to the Commissioner of Indian Affairs? In this way the best interests of education would be more directly and constantly considered, and the interest of the schools be separated as far as possible from the consideration of other phases of Indian affairs.

FOR THE BEST RESULTS NO OTHER POWER THAN THE LOVE OF CHRIST WILL SUFFICE.

3. As we come close to this problem of education for the Indians we are forced to see, as we are in all systems of education, the value of the individual life, of the individual soul. We come close enough to the lives of Indians to learn to value men and women, boys and girls, one by one. And the conviction grows upon us that, to transform these savage lives into the well-ordered lives of American citizens, we need the mightiest force which can be brought to bear upon the individual life. There is but one force in the universe which is sufficient for these needs.

In the light of the mightiest motive power which can work upon the life of teacher and students in any system of education, this whole work takes on a nobler aspect. If the rescue of a quarter of a million of Indians from savagery be looked at merely as a question of political economy, and were only to be judged by the economic value of the results secured, we might after all be driven to confess that,

as the weaker race, the Indians are likely to be extinguished in our American life within the next few generations, are not strong enough to hold their own in that struggle, the outcome of which is "the survival of the fittest." If we look at work for the Indians simply from the point of view of the partisan politician, perhaps there are not votes enough to be secured by working for their citizenship to make it an object from that point of view to undertake the task of fitting them for citizenship.

But when we look at the Indians, whom our teachers learn to know and to love, one by one; when we remember the value of one human life and what our King has said to us of His love for every man whom He has made in His image; when we remember that the life of each one of these men and women, the life of each of these Indian boys and girls, is not only precious to himself or herself and to the circle of family friends who love each of them, but is also precious to the Lord Jesus Christ, and should be precious to every one of His servants who loves his fellowmen for whom Christ died, then we understand how it is that the heroic missionaries, whom we love to welcome and to honor here, go forth in gladness to years of toil, privation, and danger in the determined effort to carry forward this work of Christian education. As the need of this mighty motive becomes manifest to us, as the power of Christ's love takes possession of us, we find the force that is needed for this work.

I listen to singing at Christian worship each morning where four or five hundred strong, young, manly voices join in the hymn of praise. But I have never heard young men sing with more heartiness, with more of worshipful joy, than was to be heard in the hymn which has just been sung here this morning; and in the tones of your voices and the look in your eyes one feels something which makes it clear that the men and women who gather here for this work, and who join in this opening hymn, have been tried in life, have known its temptations, have known the awful power of sin, and have felt the joy and peace of redemption, have learned that there is a source of light and life and love from Whom streams all power "for the healing of the nations." With that full tide of power qualifying us for work and impelling us to work we shall carry to success this work for the Indians, which is distinctively a Christian work to be done by Christians who love their native land.

On motion of Mr. Philip C. Garrett, Mrs. Isabel C. Barrows, Miss Rose Hollingsworth, and Mr. J. Evarts Greene were elected secretaries.

On motion of Dr. M. E. Strieby the following persons were elected to serve as a committee on business and resolutions: Mr. Philip C. Garrett, Philadelphia, chairman; Dr. Addison P. Foster, Boston; Mr. Herbert Welsh, Philadelphia; Dr. Lyman Abbott, New York; Lucian C. Warner, M. D., New York; Mrs. A. S. Quinton, Philadelphia; Miss Kate Foote, Washington.

On motion of Rev. Addison P. Foster, Mr. Frank Wood, of Boston, was elected treasurer.

Gen. E. Whittlesey, of Washington, was invited to give a brief report from the field.

SURVEY OF THE FIELD.

[By Gen. E. Whittlesey.]

At the beginning of the year some anxiety was felt on the part of all interested in the welfare of Indians lest the progress of former years might be arrested and some backward steps taken, especially in that most important department of Indian work, education. But, though the legislation of the last Congress is not in all respects such as was desired, it is far better in its outcome than was feared. Means have been provided for carrying on the work on the same scale as in former years, and perhaps for making some progress beyond former years. We here, however, upon this delectable mountain are near enough "sky-top" to look over beyond any little depressions in the past, to look back upon the deep valley from which we have come; and we can gain courage and strength when we think of the progress that has been made since first these conferences were convened.

The fact that three-quarters, perhaps, of the Indians of our country are to-day earning their support, getting it out of the soil by their own labor, speaks for itself. The fact that two-thirds or more of the children of school age have now facilities for education speaks for itself. Those two things are enough to keep up our courage and inspire us with hope.

In the legislation of the past year upon Indian matters there are some things which are unfortunate, to say the least. I will read a sentence here and there from the Indian appropriation bill, approved August 15, 1894. The first relates to the all-important land question. It is provided for in this bill:

"That any member of the Citizen Band of Pottawatomie Indians and of the Absentee Shawnee Indians of Oklahoma, to whom a trust patent has been issued under the provisions of the act approved February 8, 1887 (Twenty-fourth Statute, three hundred and eighty eight), and being over twenty-one years of age, may sell

and convey any portion of the land covered by such patent in excess of eighty acres, the deed of conveyance to be subject to approval by the Secretary of the Interior under such rules and regulations as he may prescribe, and that any Citizen Pottawatomie not residing upon his allotment, but being a legal resident of another State or Territory, may in like manner sell and convey all the land covered by said patent, and that upon the approval of such deed by the Secretary of the Interior the title to the land thereby conveyed shall vest in the grantee therein named."

It seems to me that this is a dangerous invasion of the privileges which we hoped were granted by that most important act, the allotment bill. For here is a wedge driven in; and what the successive blows upon that wedge may do in defeating the beneficent purpose of that bill no man can foresee. I hope this conference will utter its earnest, vehement, indignant protest against all attempts to frustrate the aim of that great and good measure.

A somewhat kindred provision, it seems to me, is the following:

"*Provided*, That whenever it shall be made to appear to the Secretary of the Interior that, by reason of age, disability, or inability, any allottee of Indian lands under this or former acts of Congress can not personally, and with benefit to himself, occupy or improve his allotment, or any part thereof, the same may be leased upon such terms, regulations, and conditions as shall be prescribed by the Secretary for a term not exceeding five years for farming or grazing purposes, or ten years for mining or business purposes."

A similar provision is found in another part of the bill, relating to the Yankton Indians, in the ratifications with the Yanktons who ceded their lands to the United States:

"During the trust period of twenty-five years such part of the lands which have been allotted to members of the Yankton tribe of Indians in severalty as the owner thereof can not cultivate or otherwise use advantageously may be leased for one or more years at a time. But such leasing shall be subject to the approval of the Yankton Indian agent by and with the consent of the Commissioner of Indian Affairs, and provided that such leasing shall not in any case interfere with the cultivation of the allotted lands by the owner thereof to the full extent of the ability of such owner to improve and cultivate his holdings. This intent of this provision is to compel every owner of allotted lands to cultivate the same to the full extent of his ability to do so before he shall have the privilege of leasing any part thereof, and then he shall have the right to lease only such surplus of his holdings as he is wholly unable to cultivate or use advantageously. This provision shall apply alike to both sexes and to all ages, parents acting for their children who are under their control, and the Yankton Indian agent acting for minor orphans who have no guardians."

In the protest of this conference against the sale of Indian lands there might be introduced a protest against this indiscriminate leasing.

I will call attention to one or two things in the bill which are hopeful. Upon page 17 it is provided:

"That the Secretary of the Interior be, and hereby is, authorized to make a thorough investigation of the facts touching the so-called Ogden Land Company, its organization, when and by whom formed, its continued existence or organization to this date, its capital stock, number of shares, amount or face value, where and by whom held, its liabilities and assets, and the original history of the alleged claim of said company to any of the lands of the Seneca Nation of Indians in the State of New York, and any and all evidences of title; and also the condition of said Indians, their progress in civilization and fitness for citizenship, their number and system of government, and the propriety of allotting their lands in severalty, and to make to Congress a full report with such suggestions and recommendations as he may deem proper in view of all the facts ascertained."

The great difficulty in getting these Indians out of a condition of pauperism has been the cloud that has rested on the title of their lands for more than a century. Although we did not succeed in getting into this bill precisely the provision which we desired, which was to purchase at once this claim, this substitute was placed in the bill; and we are glad that at least one step has been taken toward the settlement of this important question.

Another matter which I regard as hopeful relates to the subject of contract schools. The law provides:

"That the Secretary of the Interior is hereby directed to inquire into and investigate the propriety of discontinuing contract schools, and whether, in his judgment, the same can be done without detriment to the education of the Indian children; and that he submit to Congress at the next session the result of such investigation, including an estimate of the additional cost, if any, of substituting Government schools for contract schools, together with such recommendations as he may deem proper."

This, we may hope, may result in the settlement of that question, which we have

discussed at so great length here, and which has been before the country and the churches for many years. I trust the conference will issue a most earnest appeal to the churches and missionary societies and the Christian people of the land not to relax, but to increase, their efforts, not to do less, but to do more for the moral and the religious education of the Indians. If the Government will provide for the secular education of the Indian children, our churches will have larger means to devote to purely moral effort. These years of transition are years of crisis to the Indians, and they are being exposed by very reason of their deliverance from the powers that have been over them to temptation and dangers which never assailed them before. Now is the time for the most earnest effort of Christian people to bring them into the paths of morality and religion. We believe that the Indian can not only be educated, but that he can be Christianized; and we need not be hopeless.

President Gates then introduced Dr. W. N. Hailman, superintendent of Indian schools.

Dr. HAILMAN. Mr. President, Ladies and Gentlemen, the first thing that I did on assuming my position was to find out about my work, and I am still engaged in that business. I can not give to you my plans for the future, as I have been asked to do; but I hope that you will approve of the large outlines of the plan of work that I have mapped out for myself.

In studying the Indians chiefly from the writings of those who know them well, and partially from visits to some of the more prominent schools, I have found the Indian youth not so different in intellectual and moral capacity, and even ability, from white children. I found the Indian children exceedingly docile, ready to learn, eager to obey, willing to do that which they were asked to do by those placed over them in authority or as their guides and leaders. I found in their efforts to live up to their moral standard they were quite equal to the white children; and in my heart there grew not only a hope, but an assurance, that with proper measures and with proper help from those who supply the material necessities of this work, and with the full sympathy with this people which I see concentrated in so encouraging a form here, there is no reason why there should not be full success with the Indian youth in bringing them to the standards to which we hope to bring them.

I do not find the Indian's intellect inferior. It is true that the schools have labored with the difficulty of language. The pupils did not understand the language of the teacher and the teacher did not understand theirs, and at first the mode of intercourse was painfully uncertain between the two. This created on the part of the Indians hesitation from not understanding the question, the duty, or the direction given them. This attitude of uncertainty did not come from obstinacy or unwillingness to obey, but from the fact that they did not quite know what the teacher wanted. The thoughtless teacher frequently ascribes it to indocility, and thereby generates the fault which that suggests. But thoughtful teachers readily overcome this tendency on the part of Indian children, who become quickly obedient and docile when they understand. I found the Indian children in the various schools endowed with one of the qualifications for success in the development of an efficient humanity—shall I say superior? no, I will say the equals of their white brethren—and that is the sense of reverence. They have a deep sense of reverence, not perhaps toward the definite objects toward which our reverence goes out, but for things round about them, for their elders, for father and mother, for the teachers, for the Government, for all the various authorities that influence their growth and development. I look upon this feeling which I have found so pronounced among them as one of the most hopeful signs for success in education and in making them strongly moral human beings. This may be killed, it may be nipped in the bud, and it frequently is destroyed in the Indian schools by persons who do not recognize it or appreciate its full value, who are inclined to smile it out of existence, to ridicule it. The Indian child's reverence, even toward an object which the teacher does not himself appreciate, is a hopeful sign. It can be directed in any way, but by ridiculing it out of existence you destroy the foundation for moral development which all children need. Upon the basis of this we can make active Christians in due time. Their reverence for the past can be made into a reverence for the future. Our object is to make them revere an ideal which is in the future, and I think this can be accomplished with little difficulty if all those concerned in the work learn to appreciate this fact.

One of my most encouraging experiences came during the summer institute season. There were held during the summer five institutes, at Chilocco, Santa Fe, Chihuahua, Fort Shaw, and St. Paul. These were well attended; and it involved some self-sacrifice on the part of the teachers, who had to pay their own expenses, which in many cases were considerable. Those who were there were intensely interested and were eager to tell the results of their experience. They communicated hope to all the rest of us. They felt certain of success, if the work is only fairly supported, and went away determined to persist in their efforts. The effect of these institutes is being felt in the Indian school work, among superintendents and agents as well as among teachers. The teachers write that in many ways where they before saw discouragement they now find encouragement.

A hopeful outcome of these summer institutes is that in some sections of the country the teachers have held subinstitutes, and plans for future institutes have been made, to which Indian workers are to be invited to exchange ideas and secure that unity of action without which success is impossible.

In accordance with a wise policy, the inauguration of which I understand is due to this conference here, which requires that the tribal relations shall speedily be dissolved and that the Indian shall be assimilated with his white brothers in ordinary daily life, I have learned that it becomes necessary to so manage the Indian school work as to get rid of it as speedily as possible. The specific Indian school is a great drawback, or will become so in the course of time, even if now it is a help. In many cases it is already a drawback to the Indian development. In the case of reservations it is not a help any longer. In reservation schools superintendents and teachers are tempted by every consideration of self-interest, by every consideration of the interest of the schools, superficially considered, to extend the curriculum and make it equal to Hampton and Carlisle, to make it unnecessary for the children to leave the reservation. By this they become a hindrance, for it is desirable that they should go off the reservation when they are ready for it, to see the factors of white civilization on the spot.

I have, therefore, at the summer institutes and in my reports, insisted upon limiting the curriculum of the reservation school to narrow limits, so that the child shall attend the reservation school not longer than up to the age of 16, if he has finished the curriculum then. I would then offer him every inducement to go to one of the off-reservation schools, or, better still, to go to some high school, or agricultural college, or academy, in the State to which the Indian belongs. It will be easy and inexpensive to send them to those institutions. It would cost much less than to send them to nonreservation schools, as it would amount to simply paying the board, and, possibly, a small contribution of tuition money. I hope that, through friends of this propaganda, if you choose to call it so, and by arrangements with school superintendents in various States, I may be able to convince the thoughtful people of those States that the civilization of the Indian and his assimilation into white civilization is just as much the responsibility of the State as it is of the General Government; that the State should help in this actively. Reforms are never begun in general legislation, but by State initiative. It seems to me that the educational work can be much more satisfactory if the States do not stand aloof and leave all to the General Government. These are some of the lessons I have been learning.

In the organization of the Indian schools as such I was struck with the lack of compactness, of unity, as a whole. Each school is an existence by itself, and is carried on largely without reference to the work of other schools. This necessarily operates unfavorably. There is jealousy between the reservation and non-reservation schools. The reservation school tries to make the nonreservation school unnecessary. Wherever they exist independently without unity of action they ignore the day school altogether. I hold that the day school is an exceedingly interesting and very important institution. It stands nearer in its character and make-up to the district school than any of the others, and it will be easier to make the transition from the day school to the ordinary American public district school than from any other Indian school. Again, it stands nearer to the family, to the father and mother, and, I think, to the education which is to lead to the right sort of upbuilding of public spirit, which must rest upon the love of home and reverence for father and mother. On that account I would establish the basis of Indian education, wherever it is possible, upon the district school or the day school. This has been done to a certain extent already in Oklahoma, on the Pacific Coast, in Minnesota, and in some other places. I would pay more attention to the day school than has been done. I would like to make it more and more like a district school.

From this day school the child should go to the reservation school. As the day school represents the family, so the reservation school represents the narrow community of the tribe. It is merely a phase of community life. The nonreservation school represents the national interest. So the child would be gradually led from reverence to the family to reverence for a little wider community, and finally to reverence for the national life. There would naturally grow up in the children a broad and deep patriotism based upon the love of home, which is the only patriotism worth having. In order to accomplish this it is necessary to have a more compact organization; to have all these factors working consciously toward this end; to have the reservation respect the day schools, and to have them both work toward the non-reservation schools, where their work will be crowned.

There is another point. I would solicit your help in the better organization of the industrial and agricultural work of the schools. This is of prime importance. It is, perhaps, more necessary than literary work; but, unfortunately, it is administered by persons in no way interested in the civil service, and it is led by persons not necessarily well prepared for doing the work. Now and then a farmer is selected or an industrial teacher is engaged because of his preparation and fitness for the

work; but it is usually because of his party politics, and he naturally looks to his faithfulness to his party for his continuance in office rather than to his doing his work well. The consequence is, so far as the school work is concerned, that the man who is looking merely at the immediate outcome of what he does sees no connection of his work with anything else. The school work, therefore, is not a success. It does not look toward the future of the Indian. The amount of wheat which is raised, the productive work which he does for the school, is all that the Indian sees. He does not learn why he should do this thing in this way, why he should use his tools in that way. He does not acquire a love of work, nor the sense of responsibility, which alone makes work worth doing. It is not a school of work; it is only an opportunity to assist in producing an income for the school. The object aimed at is to see how many bushels can be raised, how many coats, shirts, and sets of harness can be made. With the narrow mind it is always quantity, not quality, that counts.

To have the full, legitimate outcome from the work of these schools there should be a compact organization. Each school should be under the guidance of one man, and that man selected for his preparation for the work. The civil-service law should be applied to him just as to other teachers. This man should guide the work of the farm and shop in every detail, so that one helps the other.

The proof of the wisdom of such an arrangement comes to us in some instances of the excellent results of the industrial work in some of the schools where excellent men are in these positions, and where they work together with these ends in view.

I can not go away without expressing my appreciation of the great value of the civil-service law to the Indian schools. When I came into the service it was whispered to me that the civil-service rules hampered the work of the Indian schools. I looked closely into it, and I was convinced that though it was partially true the hindrances were not so great as under the patronage system. I put myself in communication with the Civil Service Commission, and the result is that the method of examination of the applicant shall be modified. The questions frequently were answered according to memory or from the study of a text-book. As a matter of course, the person who had experience and maturity of mind, who had learned to think for himself and see questions in their entirety and in relation to the concerns of life, was at great disadvantage. He had no opportunity to show that he had these great qualifications. In the struggles of existence he had also forgotten these technical questions, while the fresh graduate from the high school carried away all the honors. We came to the conclusion that the best thing to do was to institute a mode of examination in which experience and maturity of mind should have a chance to express themselves. A topical way of examination was introduced, and it is a real joy to see the papers that come to us. We are now almost sure of an excellent man or woman to do the work.

I hope and pray that your efforts to free the Indian-school service from the evils which come from the so-called spoils system and patronage will be successful, and that the time may not be far away when every employee in Indian schools shall be under civil-service regulations. In the meanwhile I thank you for your hearty reception of what I have had to say.

Miss Sibyl Carter was next introduced.

WORK FOR INDIAN WOMEN.

[Address of Miss Sibyl Carter.]

A few years ago—some fifteen, I think—I started out, not to see what I could do for the Indians, but what could be done about solving the Mormon problem. I soon was filled with interest about the Indians. I began to turn it over in my mind how I could improve their condition. Though they seemed lazy, it was not laziness, but idleness, that was the trouble; and there was a big difference between the two. Go on to almost any reservation and you will find there Indian men and women not only not lazy but downright old-fashioned industrious. I began to ask myself, "What can we teach these people to do?" I was glad to have them take up land, but they can not all be farmers. I have a piece of land of my own, but I could not make a good farmer.

I was once connected with an educational society. Then I passed over to my church missionary society, and I made my first long Indian-missionary journey with Bishop Hare in Dakota. After that journey a lady said to me, "What are the Indians like, anyway?" I replied, "They are browner than I am, though not much; but otherwise they are just like us." "What do you mean," she said. "They eat the same as we do when they get anything to eat; they dress the same as we do when they get anything to wear; they like the same things, and they need the same things; and the great thing they need is work." What is the difference between an Indian woman and me? I was brought up on a Louisiana plantation, and I had not the least idea that I was ever to be cut adrift. But the civil war came and the Northern soldiers

burned down my home, and I lost my father and home on the same night. What happened? Christian women gathered round me and got me a school to teach. I shall never forget the first money I received, \$60 a month, for teaching that public school in Chicago. I felt as rich as Vanderbilt. Christian women held on to me, and have made me what I am by holding me up. I have had all the work I could do, and have always been able to pull up some other woman. For thirty years I have earned my own living and am proud of it. So I felt sorry that the Indian women had no work.

What did I do? I planned to teach them some handiwork, and pay them wages. Work is power. Work ought to be the foundation stone. I began with the mothers, teaching them in their homes. I had no schools, and I did not teach girls. I taught them lace making. I have women over 70 making beautiful lace. My special work is to clean up the home and form an industrial community, so that when the girls come back from the Eastern schools they will have something to do and find pleasant homes.

I have said that all Indians can not be farmers. Neither can all Indian women be lace workers. Other industries and trades should be started among them. Is there not someone here who can do this?

I pay for the work as soon as it is done, and almost universally the women use the money wisely. It does require some patience to deal with these Indian women. They do not clean up in a moment or settle to work in a moment. I formed my first class at White Earth, and I had twelve women to begin with. They worked for six weeks pretty well. I sent a teacher to them, because I had to leave myself. Only four came to the class. When I returned all twelve came back. They will work three or four weeks and then stay away. But I do not let them alone, not a bit of it. I go after the women, and I talk them back into the lace room. I preach to them that a woman who does not work neither shall she eat. That is my motto. A woman will work three months perhaps, and then she gets tired and goes off to the woods. I go after her again, and this time I do scold a little bit. But I put it to her plainly that it is their duty to work; that I have spent money and time and a great many prayers that they may learn to be industrious, and to be clean and sweet and pure; and the woman, with tears, comes back again, and this time I get hersure. I have now the same twelve women that I started with. When they can once do it well they like the work, and hug the lace, and do not like to let it go out of their possession. But I say, "No let go, no money," and they let it go. They need the money.

When I was going to Washington a woman came to me and said, "When you go to Washington you ask Government help me?" "The Government help you;" I said; "why should the Government help you? What do you want?" "Me want money. Ask Government give me some money." "What do you want money for?" I asked. "Buy things, help along." "Well," I replied; "I have lived fifty years, and the Government has never given me a penny. Why should it help you?" "Government not help you? Government not give you money?" she cried in surprise. She thought, and the most of them thought, that the Government supported us all, only that we were greater favorites with it than they are. No; they are not lazy. They will work if you give it to them; but it goes a great way with them if you can let them see that you work, too.

Miss Nancy Cornelius, an Oneida young woman from Hartford, the first Indian woman in the country trained as a professional nurse, was invited to speak.

Miss CORNELIUS. I am happy to be present with you to-day, and hope you will not be disappointed even if I make many mistakes; for it is no easy task for me to arrange my thoughts, or to express my ideas and hopes for our future. Nevertheless, I will endeavor to plead earnestly for my race.

Although the light is so dim that it seems impossible that our wishes should ever be fulfilled, yet I will not despair, for I believe the morning has dawned, and that this light sometime will end in perfect day. It is our hope that more of our race will awaken and avail themselves of the privileges that are now offered, and which I hope will continue to be offered them. I feel that Indians should have the same right to seek employment anywhere in the United States that other people have. There is no good reason why they should be constantly sent back to the reservation, particularly when it is so much to their disadvantage. I am an earnest advocate of solving the Indian problem in the shortest way, namely, by allowing them the full privileges of citizenship.

There are but few on our reservations who want to remain as Indians; and, I am sorry to say, I fear such Indians love to keep idle too well. They are not industrious, I am sure. Is it right that these few should keep back all those who desire to push on with hard labor? Must they wait for those who are not willing to work and learn to support themselves like other people? No; I hope not. See to it that they do not. Let them have the chance, and many of them will make splendid progress if they are among white people, and will probably make good citizens.

Of course there are some who, the moment they return to the reservation and fail of employment because it is not given them by the Government, fall back where they were before. There is nothing else for them to do. For instance, if I should remain at home I should only lose what I have gained while in school. I should not be able to improve, because I have not education enough to face the Indian battle. Therefore I prefer to remain here in the East, where I feel that I can work and learn to be independent.

I am glad to say that we, the Indian nurses trained in Connecticut hospitals, are enjoying our work very much. Thus far we have had all the work we can do, and we are endeavoring to show the ladies of the Connecticut Indian Association that their labor in our behalf has not been in vain. We can not express our gratitude to them as we would, but we never forget that they were the first to see the possibilities in us, and in spite of all obstacles to give to Susan La Flesche her splendid opportunity to study medicine, and to us the humbler but no less useful one, which we trust we fully appreciate. I have not a doubt that we all feel encouraged to believe that the work for which the Connecticut Indian Association has fitted us will enable us to show our people that we can learn and do more for them by stepping out of our reservations. And we hope to encourage others to undertake to do even better than we have done.

We appreciate beyond expression your kindness to the Indian race. We can only hope that by our future work we may prove to you our deep gratitude. We sincerely wish you every success in this great work you have undertaken. I thank you all for your kind attention.

Miss Cornelius repeated a verse in her own language, of which the following is a translation:

Some day our ears shall hear the song
Of triumph over sin and wrong.
So wait, my friends, though years move slow,
The happy time will come, we know.

Question. Do the Indian nurses receive the same pay, and are their services as much in demand, as white nurses?

Miss CORNELIUS. They have just the same pay, \$18 a week, and just as much work. We are engaged everywhere the same as any of the other nurses. There are two Indian nurses in Hartford.

Question. Will Miss Carter tell us whether the lace made by the Indian women would now find a natural market, or whether it is found only through the efforts of Miss Carter?

Miss CARTER. Someone must bring the lace into the market, for the women are on the reservations. I have a committee of one in Cambridge, who disposes of it there. There is a committee of ladies in New York, who do the same there; and I hope this winter to have it sold in Washington and Philadelphia.

Bishop Whipple said that he had showed ladies specimens of the lace with the price attached at which it was sold by Miss Carter, and they said it was cheaper than they could buy the same kind of lace at Arnold & Constable's in New York.

On the question being asked how many trained Indian nurses there are at present, it was answered that six have been graduated at Hampton, two in Philadelphia, one is studying at New Haven, three at Santee, and a class is in training at the Catholic school of St. Paul.

Hon. H. L. Dawes was invited to speak on the Indians of the Indian Territory.

THE INDIANS OF THE INDIAN TERRITORY.

[By Hon. H. L. Dawes.]

General Whittlesey, in reviewing the work of the last Indian appropriation bill, which is the only one I have been ignorant of for thirty years, filled me with great anxiety and apprehension; and, if you will allow me on this the only opportunity I shall have, I would like to enter my earnest and solemn protest against the beginning of the undermining of all your work, which he finds in that bill, by which the Indian who has had his land set off to him in severalty may be permitted to turn himself into a landlord, and sit down in idleness and dissipation the rest of his life. All else you will do toward the civilization and Christianization of the Indian will fail if you provide for him a way to live in idleness.

The fundamental corner stone of the severalty act is, that if a man will not work neither shall he eat. Unless the Indian can be taught to earn his own livelihood, you can not civilize or Christianize him. God has ordained work as the great element of both these developments. That is all, I hope, I shall ever have occasion to say touching this one departure from the very idea of that law—a departure which has been resisted up to this time for ten long years, and has now become, as General Whittlesey has well said, an entering wedge which will receive new impetus every

hour that legislation shall indulge in the false idea that it is better that the Indian should employ a white man to work for him than to work himself.

Since I was here the last time I have been engaged in a branch of the Indian work which has never attracted the attention of this conference, because up to this time it has been excluded by law from any participation in your work.

It pleased the President of the United States to ask me last fall to take charge of a new branch of this work. I call it to your attention, not for the purpose of distracting or withdrawing any thoughts from the work which has so wisely engaged you so long and with such eminent success; but the Indian work does not pertain to the tribe, but to the race. If it is necessary and beneficial for those that are now within the pale of the legislation of the United States, it is equally good and equally essential to those Indians within the borders of the United States who are by the law of the land excluded at this moment from a share in your work.

The Indian Territory, as now constituted, is a tract or domain erected into a separate government in the midst of the United States, 21,000 square miles in extent, nearly three times as much as the State of Massachusetts or Maryland, and more so than the State of New Jersey. It is larger than the State of Indiana. It was originally about twice that size, 42,000 square miles. Oklahoma within a few years has been cut off from the Indian Territory. The Indian Territory is a beautiful region, as fine as any within the United States—excellent prairie land, beautiful forests, fine cool streams, hills and valleys rich in mineral resources and coal deposits of great extent, all that constitutes, in resources and possibilities, a State in this Union of the first rank and power and influence.

It is occupied at the present moment by about 50,000 Indians of all kinds, and nearly 300,000 white people. It has, by covenant with the United States, the right to govern itself absolutely, and is thus an imperium in imperio. Its government is divided into five divisions, each independent of the other, and each bearing on paper a resemblance to the Government of the United States. Each has its own governor, chief, or president; each has its general assembly, consisting of two houses. Each has its supreme court and each its circuit courts, and all the paraphernalia and machinery of a government founded after our own. Why can it not remain so?

The reasons why it can not remain so have seemed so many to the Government of the United States, and the reasons why it will not remain so have been so impressed upon the attention of the United States, and the reasons why the present condition must soon end have seemed so certain to the Government of the United States, that it was provided by law that the President, with the advice of the Senate, should appoint a commission of three persons to go down there and negotiate with those five governments, so that they can of their own accord, if they will, change their form of government and come within the pale of the law and the Constitution of the United States, and assimilate themselves to us, and become a part of this Government with the ultimate view and purpose of taking their place as one of the States in this Union. That is the purpose of the Commission which has been at work there during the last year.

It may be proper that I should call your attention to the reasons that have made all these conclusions, that it can not last, that it will not last, that this change one way or the other is imminent and in the near future, and that there is danger unless it is changed by the methods suggested by this Commission, that it will be a violent, if not a bloody, change.

Sixty years ago the United States, in a feeling of compunction of conscience caused by its treatment up to that time of the Cherokee Indian tribes, made a very liberal arrangement with them, thinking that if they had been wronged up to that time they would show how liberally they could treat them forever after. So they offered them, if they would leave the home from which they were being violently driven by the State, homes west of the Mississippi River; and they stipulated with them that they might have 42,000 square miles of the finest of the domain of the United States forever for their own, with the one reserve that they should receive among their number other friendly tribes. In the title deed it was covenanted that each and every individual Indian should have the same right and title in every part of the Territory with every other individual Indian.

After moving these Cherokees into this land, the Creeks, Choctaws, Chickasaws, and ultimately the Seminoles were received among them. Since that time the Indians have conveyed to the United States and the United States has erected the Territory of Oklahoma on the western part, leaving the half I have mentioned.

The United States on its part covenanted with them that they would keep forever off from this land all white men. And the Indians covenanted that they would keep this land exclusively for the use of every Indian in common. The purpose of the whole arrangement was to establish here a tract of land for the Indians so far out of the reach of civilization that never in all future time would it be disturbed by any element of civilization. They could go there from Georgia, and work out for themselves in peace, undisturbed by the encroachments of the white man, the problem of

their own civilization. It was provided, also, that they should have a perpetual outlet to the west as far as the jurisdiction of the United States should extend. Only sixty years ago this was the idea that controlled the arrangement of the Government of the United States!

Hardly half that time had passed over this arrangement when it became evident that to keep it was an utter impossibility. Since that day and since these people took their home in the wilderness the State of Kansas on the north, and the State of Arkansas on the east, the State of Texas on the south, and Colorado and Texas on the west have surrounded this home of the Indians with a teeming population, overflowing the boundaries on all sides, as the waters of the rivers overflow their banks in the time of freshet. The Indians themselves have taken hold in the same spirit. They have invited railroads to run north and south and east and west through the length of their Territory, bringing in upon them all the influx of population which follows railroads; and at every station has sprung up a town.

Then this idea of having somebody else work their land for them crept in upon them, long before it got into the Omaha Reservation on the last appropriation bill. They made an arrangement that any Indian who chose could surround with a fence any portion of the unoccupied land he pleased, and could then go up into Kansas or Missouri and hire a white man to come and work it for him, if he would pay a dollar a month into the treasury for taxes. So there came to be invited in one way or another, and by the building up of the towns, a great many white people. There came by absolute necessity merchants, and storekeepers, and warehouse men, and others, till the result has been, in spite of the covenant of the United States to keep white men out of that Territory, and on the part of the Indians that they should keep this land exclusively for the common enjoyment of every Indian, the condition of things which we find there to-day. A few of them have appropriated everything that is worth anything in the Territory. Of the 50,000 Indians, about one-half are mixed blood. In the Creek Nation they are mixed largely with the negro, and in the other nations with the white. The mixed bloods are educated. They are keen, able, enterprising business men, and politicians withal as shrewd as the shrewdest in the States. The full bloods are making no progress toward civilization. Indeed, the whole aspect of things there with them, I am sorry to say, is no better than it was ten or fifteen years ago, when I was first there. The full bloods are crowded out. The mixed bloods have taken possession of the governments. They hold the power as absolutely over the full bloods as the white man in the Southern country before the war held the whole power over the poor slave. The full blood in the Indian Territory to-day is as helpless, as hopeless, as was the poor black or the poor white man in the South before the war. The mixed bloods have all the power in their hands, and have appropriated everything for their own benefit.

Let me give you an illustration. The Creek Nation has 3,000,000 acres of land. They have sold to the United States every foot of land which they could spare, and divided nearly all the proceeds per capita among themselves. They had a good time as long as the money lasted, and when they could sell no more to the United States they passed a law in their assembly two years ago that any Creek Indian could appropriate to himself just as much unoccupied land as he could find and fence in by paying a nominal rent to the treasury of the Creek Nation, and this with authority to sublet it to whom he pleased and have what price he pleased.

What has been the effect? Out of 3,000,000 acres, within two years 61 Indians have appropriated 1,000,000 acres, and have sublet it to Texas cattlemen for from 25 cents to \$1.50 an acre; and these are the men who hold the power. An ex-chief is one of those named in the leases. Two sons of another are of another company. Another high officer has his hand in it, and we were told that the members of the council which passed the law had parceled out on paper their share, and that the poor colored members under the law so enacted were frozen out and did not get any. So they told the story. That is more than one-third of the whole territory. That has gone on rapidly till probably there is not an acre of valuable grazing land that has not a barbed wire fence around it to-day, though they covenanted that every individual Indian should have just as much right in every acre as any other. And the poor fellows, the full-bloods, away out on the mountains, get a scanty living, with no prospect of bettering themselves or of knowing what is the matter.

One of these nations appointed a committee to confer with us. Three out of the five were men who held land in this manner, and the two others were full-bloods who could not speak a word of English. We had a pleasant conference with them, and these three men, with the profits of such leases in their pockets, got up and said they did not want to take land in severalty. They did not want the poor Indians to take it in severalty, for some one would get it away from them! Someone would deprive those poor fellows up in the mountains of their 160 acres! They lamented this attempt on the part of the United States to deprive them of this method of holding it, by which they preserved it from the spoiler!

At first we thought it was all so. We did not then know about such arrangements.

By and by one of these poor fellows got up and talked to us. He said he loved his old ways as much as anybody, and he disliked to depart from them. He had listened to those other people, and he supposed it was all so, though there was one thing he could not understand and he would like to have explained, why neighbor so-and-so, pointing his finger at him, had a ranch of 30,000 acres and he himself had only 2 little acres up on the mountains. He did not understand how that was.

Now, the men who have the control of this property are the men who hold the government, and the men who ought to consent to what we ask them to do, which is to take their land in severalty, each one of them 160 acres, with a title deed such as the severalty law provides. That law is so fixed, as it was originally enacted and as it has existed until this new appropriation bill, that the allottee could not part with his land without the consent of the United States, and the United States could not part with it without his consent, and neither without the act of Congress. That is the title under the severalty act, and that is the title which was struck in its vital part by the last appropriation bill. We propose to them to divide this land in severalty, to do away with tribal reservation, and for them to take a Territorial government under the United States. This difficulty we found not only with one Indian tribe, but it is so substantially with the other tribes.

As fine soft bituminous coal as is found in the whole United States is found in the Choctaw and Chickasaw reservations. These deposits are of immense value. They must be depended on for well-nigh the entire supply for the Southwest. They can not be worked without capital, without skilled labor. They can not be worked by Indians. They must be worked by white men who understand the business. The Choctaws and Chickasaws have undertaken to provide for the working of those mines, and have provided that any Indian who discovers a deposit of coal may be entitled to a mile every way from that point, with a privilege of subletting it. Our enterprising friends from the Pennsylvania mines were induced to come down and tell them where to discover this coal, and then to take a lease, until now there are leases on every foot of land which has a coal deposit, worth infinite millions of dollars in the future.

These men from Pennsylvania have come and invested capital and paid a nominal sum to the treasury of the Choctaws and Chickasaws, and are doing the mining. That was the best method possible. They want to develop these mines; but they have no title, though they have probably invested millions of dollars in developing them. The United States has approved of some of these leases. I myself drew up a bill approving ten. But the United States can not deprive any Indian of as much right as any other Indian has in every foot of the coal lands as well as the other lands. Now, how did they manage? I am sorry to say that boodle is said to work marvelously in their legislation and their judiciary, we are told, is often affected by it. You can not get a measure through without proper fructifying influences. It is utterly hopeless. I would not dare to tell you how much they said it cost to get those leases through the legislature.

The United States within the last five years has paid to these Five Nations \$18,000,000 for the land they have sold and other claims. What has become of the money? Instead of providing that it should be set apart as a fund for the civilization and education of this people, it has provided that it should be distributed per capita. Six million dollars has been distributed among 18,000 people within the last few months, and they have been demoralized and debauched beyond measure by the money which the United States has paid to them.

The coming in of the railroads has caused the building of towns. I lived for two months in a town with 2,500 white people. There were fine stores and other buildings necessary to a town of that size, but the people do not own a foot of the land on which their buildings stand. They have not a single particle of town government or a police officer to maintain order and prevent crime. A town farther south has sprung up within a few years of 5,000 inhabitants, in a region that has suddenly developed into a cotton-raising country, and all the title they have is that one man had run a barbed wire fence around acres enough, and told them they might build a town there by paying him and his associates rent. All the houses, warehouses, storehouses, and all of the wealth that must necessarily come in there is without law or protection of any kind. There is no court open to them into which they can go for redress of grievances against the Indian or protection of person against him. Although the United States covenanted with these people that they might govern themselves, they were compelled to establish a United States court there when they found such a condition of things. But they gave it a limited jurisdiction, and the court can consider only cases between white people and between whites and the Indians. No Indian can go into such a court for redress in a case with another Indian, no matter if it be murder.

There are 300,000 white people in this condition. They have about 30,000 school children, and not a public school in the Indian Territory is open to one of them. They are growing up in absolute and abject ignorance, unless their parents are able

to maintain a private school out of their own pockets. They are permitted to enter the schools of none of those Five Civilized Tribes, as we call them. Every year brings lines of those children into the age of majority, and without any education to fit them for citizenship or the business of life, to preserve them from the disastrous deviations from virtue, or to preserve law and order.

Let me ask you how long can such a condition of things continue in peace? It is due to these people that I should say, with what I have said of them, that it is amazing to me that they have preserved order as well as they have. It was amazing to me, as I went into the streets of those larger towns after dark, to see how well order was preserved without the force of law. But how long will that remain? How safe is it to rely upon such a condition of things? Take these mining towns that were built up by these Pennsylvania men. They are towns of pleasant appearance, attractive habitations, and good order; but there are mining towns within 3 miles of where I lived where there are thousands of Italians employed as miners where there is no law to preserve the peace. While we were there a strike occurred in that mine, and 3,000 miners marched out, spreading terror through that country till the United States, without authority of law, came into that Territory to preserve order and life.

I have spoken of the courts. I heard stories there about these courts. One man told me that in his own case he could have had judgment for \$300, but he would not pay money for a judgment, as the right was on his side. His friends told him that he had better pay it than lose the case. "I happened," said he, "to be foolish enough to think that the idea of justice prevailed in our courts, and I refused, and the judge gave judgment for my opponent." This man appealed to a higher court, and word was sent to him that if he would pay his money the judgment would be reversed. That is an illustration of cases represented to us to be not infrequent.

The ablest man I ever saw in the Indian Territory, a well-educated man, has in him the blood of a distinguished white man in the States, an Indian nobleman, and we were told some negro blood besides. He is a nabob. I had known him in Washington. He showed me his stud of blooded horses, and took me in a carriage behind two Kentucky thoroughbreds, and showed me every point of interest. I asked him about the colored people, and he spoke very well of them, but talked of the corruption of which I have spoken as a common thing. He sees the handwriting on the wall; but it is for his interest to put it off as far as possible, and so he violently opposes any change.

The United States court has cost more than almost all the other United States courts in the country. One-seventh of all the cost of the courts of the United States is paid for the cost of that one court, although the people over whom it exercises its limited jurisdiction are not a seventieth part of the people that come under the other courts.

This condition of things is as certain to pass away as that the sun will rise to-morrow morning. The only question is, How shall it pass away? The President of the United States created this Commission to go down and advise these people that they had better themselves make the change. Unless they succeed, one of two things is certain to come in the near future. The United States will at an early period, by legislation, take it out of their hands and dispose of it as they see fit, or it will break up in some violent war of race or in blood. The work is attended with difficulties beyond comparison. I had no conception of it when I went down there, any more than I had of the real condition of things. I had lived under the belief that they were almost a pattern people down there. I had been told that there was not a child of school age but had open to him the doors of the free school, that there was not a pauper there, and that everyone of them had his share in the common rights.

I have stood in Congress against attempts to encroach upon their treaty rights, and perhaps I was sent down there because they knew how I felt in reference to it. But I have seen that the original purpose of the Government has failed because both sides have departed from the original covenant. It has been impossible for either side to keep it. They could no more stop this overflow of the white people upon that Territory than they could stop the flow of Niagara. It was irresistible. Something else must take the place of the old arrangement; and this fair and honest offer of the Government to them is that they should take the matter into their own hands and themselves make the change.

You are not going to escape this part of the Indian work. The Indians there belong to the Indians of the continent. It is one whole, and they must become a self-supporting portion of the citizenship of the United States or all go down together. The legislation and the tendency of the efforts in this country are to bring them all up together to the common level of self-supporting citizenship. When this is done, and you keep the cormorants away from the severalty act, your work will be completed, and not till then.

Adjourned at 1.30 p. m.

SECOND SESSION.

WEDNESDAY NIGHT, *October 10.*

The conference was called to order at 8 o'clock. Mrs. Hall, of Albany, sang "The Morning Land." Rev. H. B. Frissell, of Hampton, was asked to speak.

Dr. FRISSELL. The story of Hampton has been so often told that it is hardly necessary to repeat it here, especially as Mr. Smiley gave us a chance to tell it earlier in the season, when Mohonk and its friends gave us a contribution of about a thousand dollars, and Minnewaske about five hundred more.

We are glad to report that the work is going on; and, although the year has been one of struggle, no department has been given up, and we have the usual number of students. We feel a new strength and a new inspiration for work when such a man as Dr. Hailman tells us what he wants us to do. We are trying to do advanced work. We no longer take Indians in their blankets, but those who have had a chance on the reservations; and we try to fit them to be teachers, giving them every advantage, so that they shall go out well trained. We advance our Indians into our preparatory schools as pupil teachers, and give them directions and practice in the work of teaching, that they may know how to instruct their people when they return to the West. In addition to that, we are trying to make our industrial work more educative. All the students get regular manual instruction in the use of tools and in the different sorts of material, in addition to our work in trades. We are also progressing in the matter of mechanical drawing. We have had a very good class of students this year, better than ever before, although there has been some difficulty in getting the Government to give permission to some of the students that we wanted. The ladies of the Massachusetts association have sent us some Apaches, a very interesting experiment. Six of those who have been under the care of the War Department were sent to us. Their board and clothing are paid for by the Massachusetts association.

In addition to that we have been taking Cherokees from North Carolina. They are an earnest, struggling lot down there, and we are glad to bring them to Hampton and give them a chance. The results of our work have been good. The records show that 87 per cent of those who have gone back have stood the test, and are engaged in some sort of regular work. One thing that Hampton has done is to keep track of them after they leave. We send out a number of our teachers or officers into the West, not only to gather students, but to look after the old ones; and we try to help the wavering. So that there are 87 per cent engaged in some regular occupation, and we believe that that compares favorably with the work of schools among the whites. We need help in the West. Mr. Turner, Mr. Bryan, and others who have gone out report that our students have not the opportunity that they ought to have. We need more missionaries in the West. The result of taking away the help given by Government to the denominations has not thus far advanced the work out there as it was expected to. Some of our boys go back to agencies where there are no missionaries, and have little moral help.

Dr. Frissell said that he had several Indian students with him, and asked that some of them might be invited to speak.

Mr. Ebenezer Kingsley, a Winnebago, who graduated at Hampton and is now in its printing office, was asked to speak.

Mr. EBEN. KINGSLEY. I have always wanted to have a chance to speak to people about the Indians, but when I do get a chance the things that I wanted to say fade away from my memory.

President GATES. We have all been there, my friend.

Mr. KINGSLEY. I will tell you some things about the Winnebagoes, one of whom was my mother. They number about 1,200 living, in northeastern Nebraska, along the Missouri. The Government has built houses for most of them, so that only the nonprogressive live in tepees. At one time the Government used to give them rations, but that has been discontinued, and farming implements and machinery have been given them instead. This, I think, has been a very good plan, because it has made them more independent and more willing to work than if they could have had rations all the time. The tribes that have made the most progress in civilization are those that have had to provide their own food. Since 1887 the Winnebagoes and the Omahas have taken up their land in severalty, and have become voters; but many have not realized the value or meaning of the vote. A good many of them sell their votes. The politicians of the county come over and buy them for 50 cents and upward. As an instance, I was there last fall, getting scholars for Lincoln Institute, and I had a chance to talk with the Indians; and one Indian told me that they never used to sell their votes, but that last fall they did. He said: "We found that the supremacy of one party over the other did not affect us in the least, and, as we needed the money, we sold our votes." That shows the way a good many of them look at it. Of course, we know that the supremacy of one party over the other does affect everybody under the Government; and I told them

about it, and that good white people never sell their votes, no matter how poor they are. They raise a great deal of corn and grain, but very little stock. I told a good many of them that if they would raise less dogs and more hogs it would be better for them and I do not remember any disagreeing with me.

Two of the worst things on the reservation I would like to tell about. One is the drinking among the Indians. This habit has grown a great deal since they became citizens. The white people say they are citizens, and can have anything they want, and so they sell to the Indians all the whisky they want. Another bad thing that is allowed on the reservation, and that could be stopped, is the Indian dancing. This dancing is one of the worst things there. It keeps the Indians from work, and, as it is their custom to give presents to each other at the dances, sometimes an Indian will give away the only team that he has for working his land.

Another thing that needs to be corrected is the marriage custom among the Indians. This is very important, because, as they do now, they do not follow the laws of the State. The agent should have power to enforce the laws of the State, and, if broken, he should have power to punish those who break them severely.

A great deal has been said about the failure of our returned students. There are some who do fail, but I do not think that the failures are enough to discourage our friends from helping Indians. There is a difference of opinion among our friends about the wisdom of appointing army officers as Indian agents. We have an army officer as our agent, and I speak for the Winnebagoes when I say we like him very well. I do not know what kind of officers are at other places, but we like Capt. William H. Beck, of the Tenth Cavalry. The Indians there say he is the best agent they ever had. They said they had been drifting like logs in a flood, and that he had rescued them. That is just what they said. I would also say that no agent has ever been so unpopular among the white neighbors as Captain Beck. If you were to see the papers published in the county you would see how unpopular he is.

Question. How about leasing their land?

Mr. KINGSLEY. The Winnebagoes have been leasing their land to white people. I do not know what the rules about it are, but I think there ought to be some provision for their having to cultivate part of it. Some of the Indians would like to lease all of their land and "just take it easy," as they say. I think they should cultivate part of it. They may get money if they lease the land, but they will not get a chance to learn to work. They need to learn a great deal about farming, because when they do cultivate their land they do not work it as the farmers round here do, with skill and by scientific ways. They raise one crop on the same field year after year, and I think good farmers don't do that. I think that soon exhausts the fertility of the land. You can see that is one thing that our returned students can do, for in the East many of them have learned to work on farms in Pennsylvania, New York, and New England, and they have a very good knowledge of farming, and you will find the finest and largest farms among us are owned and worked by returned students.

The remainder of the evening was devoted to reminiscences. Mr. A. K. Smiley was asked to speak first.

ADDRESS OF MR. A. K. SMILEY.

I have been asked to give an account of the origin of these conferences at Lake Mohonk. Fifteen years ago, about this time of year, I received my appointment by President Hayes on the United States Board of Indian Commissioners, and the following winter went to Washington to attend the annual meeting of the board. Charges of corruption were made at that meeting against certain officers of the Indian Bureau by one of the members of the board, and a committee of the board was appointed to investigate them, of which I was made chairman. After three weeks of careful investigation the charges of corruption were proven against three prominent officers, and Secretary Schurz promptly dismissed them. Then the Secretary called upon the board to investigate the whole Indian Bureau. I was made chairman of the investigating committee, and my old schoolmate, Mr. Stickney, was my associate. We inspected the whole Indian Bureau, and particularly its methods of doing business, and satisfied ourselves that the Secretary and his subordinate officers were honestly endeavoring to conduct Indian affairs on fairly good business principles. This is how I came at once to be deeply interested in Indian work.

It has always been the practice of the Board of Indian Commissioners to invite the secretaries of all the religious denominations having charge of Indian work to meet with them at Washington and receive reports of fieldwork and discuss the Indian problem for one day. One short day seemed to me totally insufficient time to thoroughly complete the discussion, and I tried in vain to have the meeting prolonged. Eleven years ago last spring General Whittlesey and I were sent to Dakota to investigate complaints made against railroad corporations of defrauding the

Sioux Indians of their lands. While at the Santee Agency we met, seemingly by chance, a large number of prominent men interested in Indian affairs; and by common consent we sat in council for three days and discussed the complicated problem connected with the Sioux Reservation. We arrived at valuable conclusions and agreed to work unitedly thereafter. Of the twelve persons who composed that council at Santee eight are here to-night, namely, General Whittlesey, Dr. Ward, Dr. Strieby, Herbert Welsh, Dr. Addison Foster, Professor Painter, Mr. Mead, and myself. The four others were Bishop Hare, Dr. Riggs, Mr. Williamson, and Mr. Fowler. That council opened my eyes, and I determined to repeat at Mohonk on a larger scale the conference which had proved so helpful. I invited them all to meet at Mohonk the ensuing autumn, and promised to have a large gathering to discuss leisurely the whole Indian question. The first conference was held in the autumn of 1883, and every year since a conference has been held.

Another conference, the thirteenth, will be called next autumn, and doubtless many others, till the Indian question is satisfactorily settled.

Hon. William Strong, of the United States Supreme Court, was invited to speak.

ADDRESS OF JUSTICE STRONG.

I think that we must feel thankful to God for the establishment and continued existence of the Mohonk Conference. In view of what it has accomplished and is accomplishing, it is one of the great agencies for the benefit of all the Indians within the territory of the United States, and it has the confidence of multitudes who take an interest in the work which is being done for the elevation and salvation of this race. That is not all. Under God, I think we all feel thankful, or ought to, for Mr. Smiley's organization of the Mohonk Conference. It is impossible for any person to describe, or for any of us to conceive, the extent of good the conference has done during its short existence. It has created a sentiment throughout the community that I think could have been created no other way. It has united Christian men and women of all religious denominations in a common work for the benefit of the race. It has had its influence upon Congress. Its efforts have resulted in legislation for the benefit of the Indians, manifestly effective in lifting them up to respectable and orderly Christian society.

It has done this because of its organization. When Christian men and women act together as an organization, the power is far greater than could have been exerted by individuals acting separately. It is the old story of the bundle of fagots. The voice of the Mohonk Conference is not disregarded in the Congress of the United States, although it has not effected all that we have hoped. We had looked for greater beneficial legislation than we have yet received, unless we except the allotment bill, which I regard as a step far in the right direction of lifting up the Indian race. We may look for more legislation hereafter, stimulated by the sentiment that is created by this organization—legislation that shall tend very much to the more rapid elevation of the race in the direction which they are now tending.

That is not all. The publications, the annual reports, of this organization go abroad all over the country. They are read by persons who had felt no particular interest heretofore in the work of the conference; and they call forth the sympathy and cooperation of persons who, without the existence of these reports, would never think of lifting a finger to elevate the Indian above the low plane on which he has been living for generations.

This conference is not going to die. It will survive any of us who are now on this stage of action. It will live until the last Indian shall be lifted up to the civilization on which we now stand, and until they shall be gathered into Christian churches in as large proportion as the whites are gathered now. I look for the time when we shall see all the Indians in the United States as respectable, as orderly members of society, and as intelligent as the average of our own people, and perhaps even higher, because such efforts are being made for their elevation.

I have been much interested by the remarks of Miss Carter. She says the Indian women can be taught to work and induced to work. She has shown some of their work, and she wishes to secure more work for them to do. The Indian should work, not only for his own subsistence and the subsistence of his family, but he should work for accumulation and for thrift. I have noticed, with regard to the colored race, that the moment you can get a colored man to be thrifty and work, to lay up a little every year, put his savings into the bank or elsewhere, and keep them there, you can save him, and make a respectable citizen out of him. I have seen it among my own servants. If you can induce one to accumulate, no matter how slowly, he reaches a higher level than he stood on before, where he has been just a servant and nothing more. What is true of the negro is true of the Indian. The moment you can lead an Indian to work and to save the product of his work, that moment the Indian is saved. Miss Carter is working in the right direction. If the Indian women can be taught to sew, to make their own garments, and to do other things which are appropriate to the work of a woman, you save them, and lift them to a higher plane. I cordially approve of every effort to make an Indian work, and save the product of his labor.

In regard to the last legislation which gives the power of the alienation of land by the permission of the Secretary of the Interior, under certain circumstances, I agree with General Whittlesey and Senator Dawes in objecting to that provision of the last act of Congress. It is a very dangerous provision, and I hope it will be repealed. At the same time I think the power to lease these allotted lands should somewhere be given in some cases. All these allottees can not be, and ought not to be, farmers; some ought to be mechanics. There ought to be shoemakers, carpenters, blacksmiths, among them.

All these lands ought not be held for farming alone. There are many cases in which it is impossible for an allottee to cultivate the land. What is a woman, for instance, to do? Is she to farm it, or is it to lie idle until the twenty-five years expire? What is the young man to do who desires to become a physician, or a lawyer, or a clergyman, or who desires to go abroad for the purpose of securing an education? He can not do this and at the same time farm his land. Is, then, the land to lie idle, and to be of no benefit at all to the allottees? There are many other cases in which it is conceivable that the land, to be of benefit to the allottee, must be capable of being alienated for a limited period. I think there ought to be a tribunal established which shall judge each case by itself. I would not leave it to the Secretary of the Interior, living off in Washington. I would establish a tribunal, or I would authorize the district court of the United States to decide each case by itself. The Secretary in Washington would necessarily decide on the recommendation of persons of whom he knows nothing. He could not take the time to examine each case presented to him. The act of Congress is entirely objectionable in my view, and, as I said, very dangerous. I would limit the time of alienating the land to five years, or perhaps not more than three. But there should be the power and privilege of leasing after careful examination by some properly constituted tribunal. It can best be done by a court.

I feel a profound interest in the work which this conference is doing, and I look forward for greater results in the future than have been attained in the past. We know that, largely through the influence of this conference, three-fourths of the Indians are now self-supporting. They have learned to work. The other fourth ought to be brought up to a similar condition; and I trust that, with the blessing of God, this result may be attained within a few years.

Dr. Strieby was asked to continue the reminiscences.

ADDRESS OF REV. M. E. STRIEBY, D. D.

I will confine myself to the decline and fall of the peace policy of General Grant. This was an effort to get the Indian work out of politics. The nomination of Indian agents was assigned to different missionary societies. The American Missionary Association accepted the appointment of six agents, and afterwards eight. Our senior secretary, George Whipple, was then in the management of this department. He was a man of fine presence, of noble countenance, and most sterling judgment. We all recognized this. When we had talked a subject all over and expressed our opinions, the last decision of George Whipple carried every one of us.

The Grant policy went on for a while with considerable success. But by and by the enthusiasm waned, and the influence of politicians once more came to the front. I remember a United States Senator once, who wanted his brother to be appointed to an agency, and our library was to be enlarged by the gift of books, etc. His brother was not appointed, and the books never came.

I was acquainted with Secretary Schurz. He was a very genial man. I remember once, when the secretaries of the missionary societies were gathered round him, and some one said, "Why don't you lay down precise rules for these agents, so that they will know what to do?" "Well," said he, "they have the multiplication table and the Ten Commandments. What more do they want?" There it was in a nutshell.

On one occasion the association nominated a man as agent. He was thoroughly competent, and Secretary Schurz believed him to be so. The session of Congress was drawing to a close. I went to Washington and had a conference with Secretary Schurz. Our nomination was sent in, and it was so late we thought there would be no dodging it. But a certain Member of Congress wanted some one else; and at the last moment, when it was too late to avert it, our man was rejected and the other man was appointed. It was time, then, for the Mohonk Conference to be established to influence public sentiment.

With the decay of the Grant peace policy, which was becoming inoperative, there was nothing to do unless God should raise up an agency that would do what this grand conference has done—lift up a public sentiment that should influence the whole American people, and through it the National Government.

It was announced that Dr. Lyman Abbott would give the next address and that he would be followed by Bishop Whipple, whose presence was a perpetual benediction.

ADDRESS OF REV. LYMAN ABBOTT, D. D.

I am not a member of the same communion nor in the Episcopal succession, but there is no living man whose Episcopal benediction I would rather have than that of Bishop Whipple.

When the Lake Mohonk Conference was first founded, in the year 1882, the Indians of this country were almost all of them living on reservations. Attempts were being made for their education, sometimes by the Government, sometimes by missionary societies, sometimes by a strangely un-American partnership between the Government and the missionary societies. And all these attempts were individual, sporadic. The American Indian, on American soil, was so far accounted a foreigner that in the Congregational organization he came under the head of foreign missions, and the churches maintained in the midst of Indians were a part of our foreign missionary work.

They were shut up in reservations. The reservation is a territory, larger or smaller, surrounded by an imaginary line, beyond which no civilizing elements are permitted to go without the consent of a despot, who may be a good one or may be a bad one, but who is equally a despot—the agent. The telegraph, the railroad, the post-office, the court, the bank, the newspaper, the church, the school, the market, the common interchange and play of life, are all shut out. I hold in my hand a report of the Board of Indian Commissioners for 1885. I will beg leave to read a description of the reservation system at that time, which I find embodied in that report, written by a gentleman whom, possibly, the president of this conference may know better than I know him; but I am sure he does not honor him more than I honor him—Merrill E. Gates.

“The mightiest of all teaching forces is example. Constant association with those whom they wish to imitate transforms men as does no other process. From this all-powerful civilizing force, example, we carefully exclude the Indians. We herd them by themselves on vast, vacant reservations.

“While we profess to desire their civilization, we adopt in the Indian reservation the plan which of all possible plans seems most carefully designed to preserve the degrading customs and the low moral standards of heathen barbarism. Take a barbaric tribe, place them upon a vast tract of land from which you carefully exclude all civilized men, separate them by hundreds of miles from organized civil society and the example of reputable white settlers, and, having thus insulated them in empty space, doubly insulate them from Christian civilization by surrounding them with sticky layers of the vilest, most designingly wicked men our century knows, the whisky-selling whites and the debased half-breeds who infest the fringes of our reservations, men who have the vices of the barbarian plus the worst vices of the reckless frontiersman and the city criminal, and then endeavor to incite the electrifying, life-giving currents of civilized life to flow through this doubly insulated mass. If an Indian now and then gets glimpses of something better and seeks to leave this seething mass of in-and-in breeding degradation, to live in a civilized community, give him no protection by law and no hope of citizenship. If he has won his way, as many have done, through the highest institutions of learning with honor, tell him that he may see many of our largest cities ruled by rings of men, many of whom are foreigners by birth, ignorant, worthless, yet naturalized citizens, but that he must not hope to vote or to hold office.

“If he says, ‘I will be content to accumulate property, then,’ tell him, ‘You may do so; but anyone who chooses may withhold your wages, refuse to pay you money he has borrowed, plunder you as he will, and our law gives you no redress.’ Thus we drive the honest and ambitious Indian, as we do the criminals, back to the tribe and the reservation; and cutting them off from all hopes of bettering themselves, while we feed their laziness on Government rations, we complain that they are not more ambitious and industrious.

“Christian missionaries plunge into these reservations, struggle with the mass of evil there, and feeling that bright children can be best educated in the atmosphere of civilization, they send to Eastern institutions these Indian children plucked like fire-stained brands from the reservations. They are brought to our industrial training schools. The lesson taught by the comparison of their photographs when they come and when they go is wonderful.

“The years of contact with ideas and with civilized men and Christian women so transform them that their faces shine with a wholly new light, for they have indeed ‘communed with God.’ They came children; they return young men and young women; yet they look younger in the face than when they came to us. The prematurely aged look of hopeless heathenism has given way to that dew of eternal youth which marks the difference between the savage and the man who lives in the thoughts of an eternal future.

“Yet such is the effect of maintaining our tribal and reservation policy that we send back these young men and women, not to a life where a home and a family

could be transformed by their influence, but into this tribal mass sodden in the prejudices of centuries of heathenism, where they gasp in vain for civilized occupations and example, until the pressure of race instincts and the waves of ridicule too often close over their better hopes and habits and aspirations, as the waves of the ocean close over the life-hungry face of a drowning man."

In 1882, extraordinary as it may seem, there was a great proportion of Christian, humane, patriotic, noble men and women in this country who thought that we must leave the reservation alone and "reform it from within"—that is a favorite phrase, you know. There were some of us who believed that the reservation was evil, and only evil, and that continually; and that the only thing to do was absolutely to obliterate it, and that that could not be done too speedily. Those who held this opinion were warned of the danger of radical and hasty measures, but we thought there was no danger that the process of destruction could go on more rapidly than would be advantageous. There were three years of debate before a final decision was reached and embodied in the platform of 1885. The idea embodied in the platform was substantially this, that the reservation is an evil, that it ought to be abolished, that the land should be divided, that the Indian should be encouraged and required to take the land, and that whatever land was in excess of that which was needed for the tribe should be sold and the proceeds held in trust for the Indians.

Three years went by, and the question of education was taken up, and there was a warm discussion.

A voice. Hot?

Dr. ABBOTT. I think it was hot. I am speaking to some persons who have not attended these conferences for twelve years. I feel venerable when I think that I am 12 years old. Those who were never here before must understand that, though we had a hot discussion, it could not have been a bitter discussion with Mr. Smiley looking on; and it never was. And you can not know, as those of us that were here know, how that wonderful genius of good humor, General Fisk, poured on the oil of sweetness and love whenever the joints began to creak a little.

So the Lake Mohonk Conference, not suddenly, but by a gradual process and slow debate, reached the radical and fundamental position that the Indian is a man, and that he is to be treated as other men. In that is the solution of the whole Indian problem. Still there are men that say, "Do you think the Indian can take care of himself?" "I do not know; but, if anything is settled by a 'century of dishonor,' it is that the people of the United States can not take care of him." It is safer to leave him to work out his own salvation and take the bitterness of his life with its sweet, with the belief that there is the mercy of God reaching out to all, a mercy which endureth forever, and has opportunities that we know not of, than it is for us to intrust him to the care and keeping of men who are—I'll tell you a story. I once visited the coal mines of Pennsylvania, and I asked one of the coal barons what sort of men were digging their coal. He said: "The Irish are gone, and the Welsh are gone. Our miners now are Hungarians." "What sort of people are they?" I asked. "Something like the parsons," he said, "some good and some bad." Those are the people we have to intrust the Indians to when we intrust them to agents—some good, some bad, but, whether good or bad, not to be intrusted with absolute authority over their fellow-men. Our Government is adapted to the protection of the individual and the maintenance of liberty. It is not adapted to the exercise of paternal functions. Whenever it attempts to exercise them it fails.

What lies before us in the future? Three things, it seems to me. What are we to work for? First of all, justice. There ought to be such a feeling of wrath and fiery indignation against the system that puts the wards of this nation into the hands of men who have had neither experience nor training, and who have not the moral qualifications for the work, and puts them there to pay for political service rendered in the past or to be rendered in the future—there ought to be such a fiery indignation against that flagrant injustice, whether under Republican or Democratic administration, that it would be impossible for such a system to live.

The second objective point is liberty. Who is it that said, "The cure for the evils of liberty is more liberty?" The time is not far distant when we shall recognize the right of the Indian to the same liberty that we claim for ourselves, and when the Indian who has land shall have the right to alienate that land. I venture to say that if my friend, Mr. Painter, will go to New York and visit some of the clubs in that city he will find some white men with their hand in their pockets, smoking cigarettes instead of pipes, and having an easy time because they have leased their land and are letting some one else do their work for them. The time for untrammelled liberty may not have come yet; but it is not far distant, and we are to speed, not retard, the day.

The third objection is education. I do not say education and religion, because I do not recognize any education that is not religious, nor any religion that is not educative. The ideal system of education has been so admirably outlined to-day by Dr.

Hailman that it would be an impertinence for me to attempt to add to that outline—an education in which church and state will cooperate, but not be in partnership; an education in which conscience, reverence, love, and faith will have their development, as well as hands, and feet, and brain.

ADDRESS OF BISHOP WHIPPLE.

I hardly know how to frame any words for my thoughts as I read in your faces your love for these red children of our Father. I have been thinking of the joy that comes to the Savior's heart when He sees how we Christian folk are learning to love each other in loving all that He loves. And may I not say when He sees these wanderers coming home that the travail of His soul is satisfied?

It is thirty-five years since I paid my first visit to the Indians of Minnesota. They belonged to the two great families that represented all of the Indians north of the Cherokees with the exception of the Six Nations of New York, the Algonquins, and the Dakotas. I read the other day that there was but one man who could read Eliot's Bible. That is a mistake. It can be read by the Ojibways, of Minnesota, and perhaps it may interest you if I read to you the meanings of the names of some of the principal branches of the great family of Indians called by the French Algonquins:

1. *Ojibway*; plural, *Ojibweg*; the Chippeways. The name means "to-roast-till-puckered-up." Probably so called from an incident in their history. (See Warren's history.)

2. *Ottawa*; plural, *Ottawag*; the Ottawas. Meaning "the traders," from their selling or passing to the interior tribes the wares they received from the French in the St. Lawrence.

3. *Biva-da-wa-dum-ig*; the Pottawatomies. Meaning "those-who-keep-the-fire," who lived in Illinois.

4. *Miami*; plural, *Miamig*; the Miamis. Meaning "those-who-live-on-the-Peninsula," who lived in Ohio.

5. *Sagig*; the Sacs. Meaning "those-who-live-at-the-entry."

6. *Od-ish-qua-gum-ig*. Meaning "those-who-live-at-the-end-of-the-water," the Mic-Macs of Nova Scotia.

7. *Wabun-aki*; plural, *Wabun-ukig*; "men-of-the-eastern-land," the Abanakis of Maine.

8. *Waubun-akig* is also their name for the Delawares, meaning "eastern-earth-dwellers."

9. *Shawunog*; the Shawnees. Meaning "southern-people."

10. *O-manomin-ig*; "wild-rice-people," the Manominies of Wisconsin.

11. *O-dug-am-ig*; meaning "those-who-live-on-the-opposite-side."

12. *Ki-nis-tin-og*; the Crees, of the British possessions.

13. *O-mush-ki-gog*; the Muskigoes, "Swamp-people."

At the time of my first visit and a little later our Indian affairs were at their worst. It is not slander to say that our Indian system was a synonym for robbery. The Indian agent received his office simply as a reward for being a henchman of some politician. The Indians had sunk to a depth of degradation that their heathen forefathers had never known. When I listen to my good friend General Whittlesey, and to the good superintendent of Indian schools as representative of Indian officials, I think of the time when the Indian school-teacher was appointed fresh from keeping a drinking saloon; and, although he held office for two years, you will not be surprised that there was not a solitary Indian child that learned to read. There was no such thing as law in the Indian country. I knew an Indian woman, of pure character, murdered in cold blood in the presence of a number of witnesses; and an Indian arrested the man, and took him to Fort Ripley, the nearest post. He was put in the guardhouse for four months, but the Secretary of War ordered his discharge because there was no law to punish an Indian. I knew a white man, when he passed an Indian sleeping under a tree, to swear with an oath, "I will kill that redskin;" and in the presence of two others he killed the Indian. Rev. E. P. Smith—I can hardly speak his name without tears in my eyes, for he died a martyr to his fidelity to the Indians—gave \$50 out of his pocket, and I \$50; but we could not secure that the man should be punished for that murder. I have often wondered, as I looked back upon those years, when I used to say that I was walking on my heart, as to why I never gave up. Well, I can tell you two reasons. When it was so dark that I could not see a step ahead, I read anew the old story of the love of Jesus Christ, and I found that there was never a solitary human being that came into his presence where he was not perfectly hopeful for humanity; for in his love there was no limitation of sects or caste or tribe. And then I remembered that when that man wrote as no man ever did write about the things of God, Saint Paul, he did not end till he said that Jesus Christ is the same, yesterday, to-day, and forever. And so I resolved to work and wait.

At that time there was a strange apathy on the part of Christian men. It seemed

as if the hearts of Christian people were dead when they thought of the poor red man, whose rights were unquestioned. The law of nations recognized that he had possessory rights to the soil, and the ordinance of 1787 affirmed it. The judiciary, the executive, and the legislative departments of the Government recognized his rights as a man. When Napoleon sold us that vast country west of the Mississippi he reserved the rights of the Indian. And yet I remember, the first time that I was asked to deliver a missionary address after my visit to the Indian country, a very wise man said to me, "You are a young bishop, and you have a very great work to do; but I hope you will not be tempted to say anything about the Indians. They are a perishing race. They will pass away from the face of the earth, and you can do nothing for them." When I came to speak I repeated the advice which I had received to the congregation. I said that advice reminds me of a story. A slave had an infidel master who said to him one day, "Jim, you are the queerest fellow I knew on earth. You are always talking about faith. It is faith in the morning, and faith at noon, and faith at night. I suppose, if you thought the Lord were to tell you to jump over that stone wall, you would go and do it." "Yes, massa," he replied, "if the Lord should tell Jim to jump through the stone wall, it is Jim's business to jump; and it is the Lord's business to get him through." So I determined to go on with my work.

I can not tell you all the lights and shadows of that early life. There is hardly a trail in all that northern forest in which I have not traveled in summer and winter. I remember once that I heard that some Indians were starving; and I waded for more than 40 miles with the snow nearly to my waist, and I was able to save those poor Indians. I can say that the lines on my cheek have some of them been honestly earned, but a power above my weak will compelled me to go and preach to those Indians the love of their Father.

I think I mentioned last year that my good friend, Dr. Strieby, had a missionary at Red Lake. I will mention an incident connected with that which brought us together. On one of my annual visits to the Indian country an Indian chief walked 150 miles to meet me. He said, "White man say they have bought my land. I have not sold land. I have not signed treaty. I hear you are servant of Great Spirit, and you pity Indian. Will you help me?" I traced out the story, and I found he had told the truth; and I asked him to go to Washington, and I promised I would help him. I went to Washington full of enthusiasm then, and I worked for weeks; and the authorities at Washington very coolly told me, "We have made that treaty, and we shall enforce it." I am afraid I became angry, but it was the kind of righteous anger of which Saint Paul spoke. I went into the Indian Bureau, and I said: "Sir, I came here to tell you a story which, if heeded, would save that northern frontier from an Indian massacre—we have had one on the western border—but I have made up my mind, if I had whistled against the north wind, I should have done as much good. I am going home, and you will hear from me through the public press." The officer said to me, "You have said a great many hard things against this Bureau." I replied: "Yes; and I have always said them over my own signature; and I never made a statement that I have not the proof which I can produce in any court of justice. And I will tell you something else. The darkest transactions of personal dishonesty I have never alluded to. Some day I may."

The next day the officials asked, "What is it Bishop Whipple wants? If he wants money for schools we are ready to help him." And they replied, "You don't know Bishop Whipple. If he makes a statement you may be sure he has proof behind him. The only thing he wants is justice for those Indians, and some day he will have it." And they sent for the Indians and made a treaty.

That Indian from pure gratitude came to see me three times, a journey of more than 300 miles, on foot, and he said, "My friend, I want you to give me a missionary." I said, "You have a missionary there. I can't send another." "Well," he said, "I want one of your kind; for I know your kind. We know your love, and we want that kind of a missionary." I sat down and wrote to Dr. Strieby and said, "I will never present a divided Christianity to those heathen folk, but I ask your permission to plant a mission there;" and Dr. Strieby wrote back, "I think the wisest thing for us to do is to withdraw, and leave the field to you."

So we established a mission there; and when we came to consider what we should call it, I asked my superintendent whom I had known from a boy what it would better be, and he replied, "You know these men are awfully degraded, and in the book of Revelations it speaks in one place of my servant Antipas, 'where Satan dwelleth,' and I think we had better call it the Mission of St. Antipas." And so we did.

That mission has been there more than twenty years, and there are to-day more Christians in that village than there are in any settlement or any village or any city in the State of Minnesota in proportion to the population. That is not failure.

As we look back upon the past, there have always been gleams of light. Sometimes they were so slight that perhaps you would not have thought much of them; but if you had been walking on your heart they would have been like the voice of God.

An Indian came to my house one day, and when I opened the door he knelt at my knee. I said, "Don't kneel." He replied, "I do not kneel to worship you. I kneel because my heart is warm to the man who has loving pity for my people. I am a wild man, but I never look into the faces of my children that my heart is not sick. My fathers told that there was a Great Spirit, and I have often tried to talk to him; but I never heard any voice." He looked up and said, "You do not know what I mean. You never stood in the dark, and could not reach hold of anything. One day an Indian came to my wigwam, and he told me a wonderful story that you had told at Red Lake about the son of the Great Spirit; and I said, I must hear that story, and I have walked more than a hundred miles. Oh, will you tell me that story? Surely the Great Spirit will not let me die till I have heard it." And the man did hear the story; and then he looked up and said, "It is not dark now. My heart is laughing all the while."

Now, there was another thing. Our Heavenly Father had so ordered it, because I was being educated as well as the Indian, that help came in his providence from a most unexpected source. I received a message that there was not enough food on the White Earth Reservation. It was before the bulk of the Indians had been removed, and the crops, owing to the grasshoppers, had been lost. I borrowed \$500 worth of flour and sent it out. And some kind friend told of it, and I received a letter from Friends in Pennsylvania, who sent me \$2,000 to take care of those Indians. That was the love of Christ. I suppose it was out from that kindly feeling I had the honor of being, perhaps, the only bishop in Christendom ever invited to address the annual meeting of the Friends of the orthodox branch, and also the Friends of the Hicksite branch of Quakers. One of these Friends I must mention, for those who are a stranger to Mr. Stewart Brown. He sent me \$1,000, which bought the first house which the Ojibways had ever received; and the vast herd of cattle that belongs to them to-day is in part due to the generosity of that noble man.

The problem has not yet been solved. The wanderers have not all been brought home. Here let me tell you an incident that happened a few years ago. We were beset constantly by a complication of anxieties. Some of our Indians had been led astray. It was sad almost to heartbreaking. I met my superintendent, whom I always called Joseph, and we talked it over very sadly. Then I burst out laughing. He said, "What are you laughing at?" and I replied, "To think that you and I are such fools. Why, the devil has had possession of these people for centuries, and we think he is going to give up without a fight. I think we had better begin to fight again." And we did.

I visited the White Earth Reservation recently. At my first visit, years ago, I met blanketed, painted savages. The last time I was there I had 550 Indians join with me in public worship, and after I was there some considerable time I did not see a single Indian with a painted face nor one who wore a blanket.

You heard my dear friend, Miss Carter, tell you about the lace workers. It is ever blessed to give employment, but she gives a great deal more than that. I was one day sitting in the doctor's house when an Indian woman, now one of Miss Carter's best lace workers, came into the room, and the tears began to run down her cheeks; and when we talked with her she said, "I am not crying because I am sorry, but because I am thinking how dreadful it is to be a woman where they have not heard of the love of Jesus Christ, and of how good my husband is since he has known of it, since we have a home." Afterwards she said to Miss Carter, "I notice you wear something around your neck that is white and looks nice, and I think my husband would like to have me wear one. Wouldn't you tell me how to do one?" So very womanly, wasn't it? And so this lace making has brought ideas of refinement connected with the home making. I do not depreciate the blessing of giving labor; but the happiest face I have ever looked into was a little deformed Indian girl, a full-blood. When I came to her log house she came rushing out to me with a little specimen of lace work in her hand, and cried, "I made it! I made it!" and held it against her heart. Then she showed me in delight a little piece of money which she had earned by making lace, and I saw the feeling of independence that was coming to the dear child. There is no rivalry in such work, save only the rivalry as to who shall do the Master's work best.

Had I time I should like to tell you something about a body of Indians, one of them the truest hero that I ever knew—a man that, during all the horrors of that Sioux outbreak, stood like a wall of fire to protect helpless womanhood. When the leader came back from that outbreak he would tell me what they had done, and all that they proposed to do; and once he said, "We are going to join with the Canadians, and they will help us; and we will drive out all those Yankees, and get back our own land." And when this brave man said, "Why don't you tell them the truth? Why don't you tell them that those Indians in Canada are ruled by a squaw, and that she would not touch with her little finger one of their bloody hands?" Then they shouted, "Shoot him, shoot him!" And he opened his coat, and said, "You may shoot me, but you can not keep me from telling you the truth."

Now, this great Government took care of the hostile Indians; and they are drawing rations to-day. But these other Indians have been left penniless. Out of my meager salary I bought from ten to twenty acres apiece for a few of them. By a strange providence their crops have failed, and we do not know how they will go through the winter. I trust the hearts of Christian people will be touched by them, and that the time is fast coming when men that deserve protection shall be protected by the United States Government.

There are a few things that I wish to say with reference to the problem of the future. I can not tell you how my heart throbbed and my eyes were blinded with tears as I heard that good superintendent tell of his plans for Indian schools. I agree with all that has been said, that the Government ought as early as possible to have the entire care of the education of the Indians; and I want to say to this conference, *festina lente*—make haste slowly. The time has not come that you can dispense with such work as has been done by my good friend Captain Pratt or by the Hampton School; but there is one thing that ought to be done at once, and that is that there should be no contract schools on the Indian reservations. Whenever you give a contract to the members of any religious body for a contract school on the reservation, you have so far united church and state, and are teaching these Indians that these are the only men who have influence with the United States Government.

Now, another thing. When the Government school at the agency has received all the Indian children that it is possible for them to care for, there is a large number of Indians unprovided for; and the effect of the severalty act is to scatter them more widely. And therefore I insist that one of the first things for the Government to do is to incorporate a district-school system for the Indians that are remote from an agency. I tried to have the Government establish some such schools, but they had no money for the purpose; but we have three most successful schools of that character, which at the very earliest moment ought to be turned over to the Government. We give the Indian children a lunch at noon of bread and butter; and these little Indians, poorly clad, come in all weathers three and four miles rather than miss the school.

Another thing. I agree with all my good brother Dr. Abbott has said of the need of looking forward to making the Indians citizens. But we have had some experience in voting in Minnesota. The President of the United States said to me, "Do you think that the making of the Indians voters will settle the Indian problem?" I smiled, but said, "We have tried it in Minnesota." "Why," he said, "I did not know it had ever been tried." In Territorial times any Indian who wore civilized dress was entitled to vote. We had a close election, and one morning we found the whole tribe had been run through one pair of hickory shirts and pantaloons and voted between sunrise and sunset. So you see how that can be worked.

Another thing. I desire to emphasize the importance of permanency in the office of the Indian agent, if the man is fitted for the trust. As a rule, the man that has never looked in the face of an Indian, when he goes to the frontier, can tell you exactly what to do and how to solve the Indian problem. After he has been there a little time he begins to learn a little something; but, unfortunately, under our political system, the very moment the man has proved himself fitted for the trust, he is removed, and even the Mohonk Conference has not been able to keep him in the place. I remember when nearly 1,500 citizens of the neighboring city, under the lead of a man whom I love and revere, Herbert Welsh, asked that an agent should be retained who was doing a grand work, pitifully failed. That political power is still stronger than our influence. But, thank God, the day is coming when this problem, like all other problems, will be solved by the law of love, the law of that Master who said, "Do unto others as you would have them do unto you."

I can tell you that there are single Indian men and women whose lives would repay me for all the work that I have ever done for them. At my last visitation I asked the superintendent of our mission to go over the names of the women, and tell me about the Christian character and purity of those Indian women. And he said, "I thank God I can tell you, bishop, that I do not believe there are any women in the State of Minnesota who are living purer and holier lives than these Indian women." I have no doubt that in the future, as in the past, we shall come to a good many hard places. There will always be hard problems to solve. But I have never had my heart so sore as when I listened to the story of my good friend Senator Dawes. It is enough to make an American hang his head in shame. But all these things must be settled by the law of Christ. We must not fear as to the final result. When God is with us we may never be afraid.

As for myself, I am an old man now, and home is near; but one of the hopes that beckon me on is that among those waiting over yonder there are many that you Christian helpers have permitted us to lift out of darkness and despair into the light and the liberty of children of God; and when I lie in my narrow bed I would rather have one of those poor red men drop a tear on my grave, and say, "He who sleeps

here would have helped me if he could," than to have the proudest monument ever built for any man who died of the world's surfeit.

The following paper was read by title, and referred to the publication committee for printing:

THE EFFECT OF EDUCATION ON THE INDIAN.

[By Frederick Treon, M. D., Craco Creek, S. Dak.]

The education of the Indians of our country has received within the past few years much attention. There has been a steady increase in the appropriations made by Congress each year, until they have grown from \$20,000, in 1877, to \$2,243,497, in 1894, for educational purposes alone. These enormous amounts have met with much opposition on the part of a certain class who have steadfastly maintained that it was a waste of money to attempt to educate the Indian. But there has certainly been a rapid growth during the past three years in favor of educating, not a few, but all of the Indian youths, and to do this large appropriations are required.

I wish to state here that I shall endeavor to treat this subject with fairness, and it may be well to say also that if I err it will probably be on the side of education. In other words, I am so strongly in favor of education that I may be influenced by my opinions to treat with liberality some things that may appear detrimental to health.

If education, as claimed by some, is the cause of much suffering among the Indians, and tends to the ultimate extermination of the race, then it would appear best to leave them alone in their wild untutored condition. But is this true? To Christianize is to enlighten, and is not that to educate?

It is unfair to suppose that education alone is responsible for the present status of the Indian's health, and particularly is the idea erroneous that he is more liable to disease when confined under proper conditions to school work than he is in his home. If it were possible for the Indian to go back to his primitive habits and customs or if he could be advanced far enough in civilization to overcome his present harmful methods of living, then the argument might have a basis. Let us see what his present habits are; and, first, let us look into his home, and note his surroundings, quoting from my article (read before the Dakota Medical Society, June, 1889), in which I state:

"In their houses we find but little or no ventilation; the family cook, eat, and sleep in one room. In this room are crowded a half dozen or more men, women, and children. Around the room hangs plenty of fresh beef, upon which the flies may light and deposit their quota of living germs to be taken into the stomachs of these people. You will also find in this ill-ventilated, overcrowded, filthy room a half-dozen or more dogs, and frequently as many more squealing puppies, with their eyes not open. Their beds are positively too filthy to describe, usually a wooden bedstead with too scanty bed clothing, were it not for the fact that the inmates seldom remove their clothing upon going to bed, and, when they arise, ablution being rarely, if ever, performed."

Dr. J. B. Graham, in a very able article (read before the Dakota Medical Society, June, 1889), entitled "Scrofula among the Sioux," says, describing their homes:

"A log cabin, with dirt floor, which is plastered till almost air-tight. Light is admitted through a single window, without any ventilation whatever. These houses are kept in winter at a temperature from 80° to 90° F., and inside are practically dry at all times. Exhalations from persons and dogs, with sputa from consumption and pus from scrofulous sores, are allowed to lodge on the walls and dirt floors. They are rapidly dried by the high temperature, and suspended in the atmosphere of the rooms. Thus it may be seen that these houses are the very gravest sources of danger. Veritable culture soils and hotbeds, they furnish the best possible conditions for the spread of tuberculosis, when the bacilli lodge in the soil prepared for them by exposure, under-feeding, and malnutrition. Not only is death lurking in the air of these places, but as the raw beef, sliced, is hung there to dry in winter, tubercle bacilli, or spores, may lodge on the beef, and, as this is often eaten raw, another most formidable source of danger to others and of self-infection presents itself."

Dr. A. B. Holder, in an article, "Diseases among the Indians," published in the Medical Record for August, 1892, says:

"Forty houses built for Indians of this (the Crow) reservation by Government contract are each a single room, 16 by 18 by 8 feet, with double, dirt-filled walls, dirt roof, one door, and one window of a single fixed sash. The conditions within in winter is well described by Dr. N. McKay Douglass, of the Santee Agency, Nebr. (1887): 'Visits to their domicile at this time of the year impress me deeply. Mercury is below zero, wind blowing a gale, snow drifting high, when I knocked at the door for admission. In a tight little Government house I find all the cats, dogs, babies, and other members of several families congregated and unengaged, save in moking, talking, and sleeping. Dogs fare equally with the human occupants.

The windows are closed, and these people and animals are breathing in an atmosphere which has been polluted by exhalations from disintegrating lung tissue and the emanations from open sores. Find such houses occupied by fifteen or twenty persons, and heated by two stoves, the smoke exit being a tight flue; open fireplaces, of such value in ventilation of small houses, being unknown."

The Indian is no longer an independent being. He is, in fact, most dependent, and the greatest importance for the Government is how to elevate him out of his physical and moral degradation, and place him upon an equal footing with his white brethren. I maintain that the day is near when an indulgent people will demand that Congress stop these enormous appropriations. To foster idleness is certainly unwarranted and unjust to the Indians. It is encouraging them to continue living in an atmosphere that is killing them off by rapid degrees. They can not, however, be forced all at once out of this deplorable state.

Having described the conditions of the Indians and shown their home surroundings, with liability to disease, let us see what the effect of education is upon them. To do this it will not be necessary for me to do more than examine the records for six years, or during the time I served as agency physician at Crow Creek Agency, S. Dak., where I was stationed the greater part of the time from 1886 to 1892. Not a death occurred in the school notwithstanding the fact that the school was visited by a number of epidemics, among them malignant measles, pneumonia, influenza, whooping cough, and a few cases of scarlet fever. During that period 6 children died after leaving the school, all from tuberculosis. At the Grace mission school there has not been a death. At the Roman Catholic mission school, also located upon the Crow Creek Reservation, where over 100 children have been almost constantly in attendance, only 3 have died, and those from complications arising from la grippe. At the Lower Brulé boarding school, with which I had somewhat to do, 4 deaths occurred in six years. How does this compare with the same number of cases in camp or the Indian's home? I believe that the Crow Creek Reservation will compare favorably with other reservations. Let us, therefore, see what the mortality has been for the past six and a half years. I find the sanitary reports show 314 deaths from the following causes:

Mortuary.

Tuberculous diseases.....	175
Miasmatic diseases.....	68
Enthetic diseases.....	2
Liathetic.....	2
Diseases of nervous system.....	14
Diseases of organs of circulation.....	4
Diseases of organs of respiration.....	20
Diseases of organs of digestion.....	6
Diseases of urinary organs.....	3
Diseases of skin.....	1
Obstetrical.....	2
Suicides and violent deaths.....	9
Unknown causes.....	8
Total.....	314

Compare the following: In 1887 there were treated 195 cases of measles in camp, 13 deaths, or 1 death in every 15 cases, occurring—a mortality of nearly 7 per cent. During the same period there were 130 cases treated in the schools; deaths, none. In 1889 and 1890 there was an epidemic of influenza. There were treated in round numbers, in camp, 124 cases, with 12 deaths, or a mortality of nearly 10 per cent. There were 73 cases in the Crow Creek boarding school; no deaths. At the Roman Catholic mission there were 100 cases treated, with 3 deaths—a mortality of but 3 per cent. In the spring of 1890 an epidemic of whooping cough prevailed in camp; 117 cases were treated, with 17 deaths—a mortality of about 14½ per cent. In the schools there were 83 cases; no deaths. During the year 1892 there were 9 cases of scarlet fever treated in the schools; no deaths. During the fall of 1892 there prevailed a malignant form of diarrhea in Indian homes on the Crow Creek Reservation. In the months of August, September, and October 31 cases were treated, among which there were 7 deaths; while in the schools, where there were 135 children, not a single case occurred.

Another gratifying observation is that five years ago nearly one-half of the children enrolled were troubled with scrofulous sores, whereas now only a few are afflicted with that malady—a fact due, no doubt, to the improved diet and sanitary surroundings of the school over that of the home life.

School buildings.—This is a matter of the greatest importance, and must necessarily exert an influence upon the health of the pupils. Too much care can not be exercised in selecting the site for school buildings. There should be in every board-

ing school separate apartments for the children, and rooms arranged to accommodate two single beds. To each room there should be a door and window, the door leading into a large hall, buildings ventilated with globe ventilators. The danger of infection where children sleep promiscuously in dormitories, or even two in a bed, must be apparent. The recitation halls should have high ceilings, be light, and well ventilated with proper air ducts and registers.

In every Indian school there should be properly equipped bathrooms, a well-appointed gymnasium, good workshops; and, last, there should be a well-furnished kitchen, with a well-lighted dining room. In addition to the school buildings proper there should be a hospital, to which children can be removed when sick.

The buildings used by the Government are often of an inferior kind, and not infrequently inadequate for the number they are required to accommodate. I am led to believe that often children are ill when in school from overcrowded sleeping rooms, bad ventilation, poor diet, and a lack of proper drainage. This was certainly true at San Carlos, Ariz., where there were nearly fifty girls crowded into a miserable one-story dormitory that could not have been more than 16 by 40, with a ceiling of 9 feet. I have gone into that place on a hot night in June, when, I am sure, the Black Hole of Calcutta could not have smelled fouler. I am glad to note that the conditions at that school are now very much improved by new buildings.

If the system of educating the Indian youths of our country is to be carried out successfully by the Government, proper buildings must be had. It is not right to take these untutored people, frequently unaccustomed to being housed, and shut them up in a miserably constructed boarding-school. They not only break down, but the system under such conditions becomes a failure.

It is hardly fair to say that they have better accommodations than at home. In their homes they have perfect freedom of mind and thought. It is the mental strain that tells soonest on them. Then, too, one of the main advantages to be gained in an education is to help them change their present harmful methods of living. The school should be a model home—in other words, an object lesson that will create within them a desire for a better home life. The first thing to be considered, then, is the providing of suitable buildings for this great work. Before 1893 reservation boarding schools received but little attention. No doubt this was due to a faulty law which limited the amount for buildings for boarding schools to so low a figure as to render it almost impossible to provide adequate buildings for the work. The present administration has done much to correct this error; and I point with pride to the excellent workmanship and modern architecture in the new, durable, and commodious reservation boarding schools which have been and are now being constructed under the excellent management of the Office of Indian Affairs of to-day, and let no one suppose that this is a waste of public funds.

The Indian youth, when brought under the influence of schools, undergoes a radical change. Much of the sullen diffidence is laid aside and a cheerful, happy disposition soon develops. Up to the age of twelve or fourteen they learn rapidly; and considering that they must lay aside the mother tongue and acquire the use of a language of which many of the sounds are exceedingly difficult for them to get, particularly the palatals, they do remarkably well. After they reach that age, however, education proves a task and they soon tire or fall behind. Whenever an Indian is placed in a position where he must think for himself and assume mental responsibility he soon sickens and breaks down under the strain. Education, for this reason, should not be pushed in the individual too fast, and the greatest care should be exercised in the plan of educating. I felt obliged, while I was serving as agency physician, to make the following special report of the Crow Creek boarding school:

"The buildings, I am now convinced, are crowded too much and the schoolroom work overdone. The children have a tired, haggard look. The hours for schoolroom exercises have been increased and the children placed under a high mental tension that will sooner or later break them down physically. To suppose that these children, who are physically weak and unaccustomed to mental study or worry, can stand as much or more than white children, is too serious a mistake to be overlooked. Particularly do I find the night session, as it is now conducted, objectionable, where the same exercises are held for three-quarters of an hour. Little children not yet six years old are under the trying lamplight, straining their weak eyes, and so overcome with mental fatigue as to go to sleep in their seats. * * *

"These children should have a time for relaxation. If they have it education will prove beneficial. Without it they will surely break down, and the system of educating the Indian youths of our country prove a miserable failure. * * * If only the larger children were required to attend nights school, where the programme was of such a nature as to remove the restraint of the day's exercises and made attractive, relaxation would be secured and good result from the same. I feel confident, if this plan was pursued, there would be fewer runaways, the school materially benefited, as well as a preventative for sickness established."

Where these children can be best educated and with the least detriment to health

has, I fear, not always entered into the question. When I entered upon my duties as agency physician in 1886, nearly the first thing I was called upon to do was to examine some children for the Hampton Institute. Prior to that time I think it was the understanding that if children were willing to go that settled it. I found it necessary to report those I examined unfit to go. The Rev. Mr. Gravatte, who was to receive the children, expressed himself well satisfied, and did not take them. After that I refused to recommend any children for school who could not pass a satisfactory physical examination, and have ever adhered to it, except in a single instance where great personal influence was brought to bear in favor of allowing a returned student to go back. What has been the result? The death rate at Hampton has fallen from about 8 per cent in 1885 to about 1 per cent for the year 1892.

It must be remembered that the change in climate, when taken from here to Hampton, Carlisle, or Philadelphia, is marked; and, as the tendency to lung trouble is very general among the people, it is clear that many of them can not stand the change. I am more and more convinced that Eastern schools should be a reward of merit for those who have advanced sufficiently to deserve a higher education. The becoming accustomed in their native climate to school and school work is certainly very desirable before the children are sent East. If an Indian youth has passed through the reservation school, and is physically able, I think it well that he be given a higher education. I am glad to note that Hampton, a school that has unquestionably done a good work, is recognizing this fact; and I hope the day is not far distant when all Indian pupils in Eastern schools will be scholars who have made suitable proficiency in reservation schools, and who have earned a scholarship.

I have endeavored to accumulate statistics, showing the effect upon the health of Indian children, with death rates, at the different Indian schools; but they are not so full nor accurate as to enable me to make a safe deduction.

Out of 77 children sent to Hampton from Crow Creek Agency, 24 have died, 10 at Hampton, and 14 after being sent home. At Carlisle the Commissioner's report shows that from 1886 to 1891, with an average enrolment of 723 pupils, the death-rate was 77; while at Crow Creek for the same period the average enrolment was 86, without a death. What occasions this difference in mortality? I answer, the cause is due to several things.

First. The difference in locality.

Second. A lack of carefulness on the part of the agency physician in their examinations.

This brings to mind what I once heard of an agency physician, who, when asked to examine a candidate, said to the child, as he felt his pulse, "Let me see your tongue," then replied he guessed it was all right.

Third. The indiscriminate taking of children who have never been in school, and confining them to the schoolroom in a climate that is trying to their constitution, forcing them to give up their homes all at once, naturally causes them to become despondent. It is all very well to argue that they are better off and more comfortable, but those things do not make an Indian child happy. A home, or the thought that a home is near enough to be visited, even though it be a miserable Indian tepee, is still home, because father and mother are there; and if the children are properly taught on the reservation, they soon begin to make alterations and changes in the home life, so gradually that the influence does not disturb the old, yet is surely felt and observed. On the other hand, children that are taken away when young, and kept until they have entered upon manhood and womanhood, come back, and they must and do come back, only to find things so different to what they had in the East as to render them utterly wretched and discontented; and any attempt at a radical change in their old homes simply meets with ridicule from the parents and ultimate failure. As a result they too often strike out on a middle course, and fall into vice and crime. But this does not signify that they all go back, or that Eastern schools have not a place in this grand work. Indeed, there are plenty of bright students from Carlisle and Hampton on the reservations to-day.

In concluding this article, I wish to say that all Indian children of school age should be required to pass a physical examination, and all who are able should be placed in school as early as five years of age. It is not right to educate a few, and neglect the many. Accommodations for every Indian child should be provided on the reservation first, or in the immediate vicinity. As they advance, let them be transferred to higher schools; and, when physically able, let them be sent East. The solution of the Indian problem, the health of the people, and the future prosperity of the race all depend upon the education of the rising generation. The work will not be accomplished in a year, or in any given number of years, but constant perseverance in properly constructed and well-lighted buildings, together with carefully selected teachers, who are adapted to this peculiar work, will do much toward bringing about the desired end.

There never was a great purpose accomplished that was not driven forward by the forces represented by vim, vigor, and enthusiasm; and we place in this line the edu-

cation of Indian youths. Crow Creek was perhaps the first reservation to put all children of school age into schools. Acting upon rules published by the Indian office, I examined every child between the ages of 5 and 18, and made a complete record of each child, its physical condition when examined, and where sent to school, or, if not able to attend any school, the fact is shown. In round numbers we have 300 children of school age. Out of that number, 275 are in school, while the remainder are exempt on account of physical disability. The children are all doing very good work, are fairly healthy, and the plan works well.

Mr. Herbert Welsh said, in an article published in the Church Standard: "The Government's duty in the care of its Indian wards is first to provide for their education, in the broadest sense of that term—education which will develop them morally, mentally, and physically, so as to fit them for the hard, practical duties and trials of life, which involve, foremost among these, self-support."

The sooner all Indian children are placed in school, the sooner will the Indians be able to rid themselves of much sickness, and the sooner will the solution of the Indian problem be reached.

A pleasant extract from a letter with reference to the admirable work of Miss Cornelius as a competent nurse was read by President Gates.

Miss Edna Dean Proctor closed the session by repeating the following lines:

CITIZENSHIP FOR THE RED MAN.

A mighty nation we have built
Of many a race, remote or kin—
Briton and Teuton, Slav and Celt.
All Europe's tribes are wrought therein;
And Asia's children, Afric's hordes,
Millions the world would crush or flout—
To each some help our rule affords;
And shall we bar the Red Man out?

The Red Man was the primal lord
Of our magnificent domain,
And craft and crime and wasting sword
Gained us the stream, the hill, the plain.
And shall we still add wrong to wrong?
Is this the largess of the strong—
His need to slight, his faith to doubt,
And thus to bar the Red Man out,
Though welcoming all other men?
Nay! let us nobly build him in,
Nor rest till "ward" and "alien" win
The rightful name of Citizen!
Then will the "reservation" be
Columbia's breadth from sea to sea,
And Sioux, Apache, and Cheyenne
Merge proudly in American.

THIRD SESSION.

THURSDAY MORNING, *October 11.*

The conference was called to order at 10 o'clock. Prayer was offered by Rev. Dr. Behrends.

The following communication from Rev. E. E. Hale, D.D., was read by Bishop Whipple:

"I have had an interesting correspondence with Mr. Gilfillan, who is a friend of Bishop Whipple, and a fellow-worker with him. The result was that he is satisfied that the Massachusetts Indian language of John Eliot's Bible is not near so dead as has been thought.

"Unfortunately, the translation of the Testament made sixty years ago into the Ojibway, or Chippewa language by Mr. Hall was spelled with the French use of vowels, while Eliot's was with the English. Where Eliot wrote *â* the Hall Bible writes *ê*, and where Eliot wrote *e* Hall writes *i*, and so on. Thus the word in Eliot, *wadtchu*, *mountain*, is in Hall *uvjini*. The sounds are the same, but the look is different.

"Miss Webster, of the college at Wellesley, has changed the vowels in a short passage which follows.

"If you have at Mohonk any experts who know the language of the Chippewas or other Indian tribes, I shall be much pleased if you will show them Miss Webster's text, and see if they can make out any of it.

"The following are the passages:

"MATTHEW V.

"1. Nauont moochequshaoh ogquodchuau wadchuut, kah na matapit, ukkod-netuhtaéneumoh peyauónuk.

"2. Kah woshwunum wuttoon, ukkuhkootomauh noowau.

"3. Wannánúmōog kodtummunge teahoncheg, a newutche wuttaihéu kesukque ketassoota móonk.

"JOSHUA I.

"5. Matta pish howan tapenumoo neepauun ut anâquabean ne fohke poman-taman: neane weetomogkup Moses ne kittin weetom unun, c. matta kuppans hadtauwahunoo, asuh kutohqu anumunoo.

"6. d. Menuhkesish, kah wunnewuttooantaish, newutche pish kutchachaubenu-mau yeug missiminnuog, wutch ahtoonk, ohke ne chadcheke imogkup wutooshiñeunk nuttinnumauonaout.

"Webe menuhkeish, kah moocheke wuttooantash, onk woh kukkuhk inneae ussenat, neaunag wane naumatuonk ne Moses nuttinneum, anoonukqueop e ahque qushkehtash en unninnohkounit, assuh menadcheanit, onk wóh koone sóhkaus uttoh aoan."

"I sent these printed specimens to several gentlemen in the Northwest, where the Ojibway language is in daily use. I sent them also to the Mashpee Indians in southern Massachusetts, and to the devoted missionaries who are at work among the Penobscots in Maine. From the passage in Joshua which had no leading word which should recall to the memory of a reader its place in the English Bible, Dr. O'Brien of the Penobscot missions selected the words for *not*, *who*, *the earth*, *only*, and *seize* correctly.

"All of my correspondents who answered my letters had at once discovered the word *wadchu*, which means 'mountain,' being the word which we have preserved in Massachusetts and in Wachusett. This gave them the key to the passage from the Sermon on the Mount, and with this assistance they worked out several of the leading words in the first three verses of the fifth chapter of Matthew.

"I inclose letters from Mr. Gilfillan:

WHITE EARTH RESERVATION, MINN., March 9, 1894.

Having now a little time, I write you more fully about the extracts from Eliot's Bible, about which I wrote you a line lately.

The first means, "Seeing the multitudes, he went up into a mountain, and when he was set his disciples came unto him."

In the first word, *Nauont*, the *nau* is the *wau* of the Ojibway, or Chippewa, which means seeing, as in *waubuma*, "he has seen." There is a slight change, as you will observe, from N to W.

The second word I do not recognize. We ourselves have various words for that, as throngs, multitudes, crowds; and it may be they have used one that has fallen into disuse with us.

The next word, *ogquodchuau*, means "he ascended the mountain." In nearly the same form it is in use among the Ojibways, one syllable only being ellipsed in the printed passage. "Mountain" is included in the word, in the *chu*. The *au* at the end is the action (or, as we would express it in English, he *made* the ascent), *au* marking the continued action. *Ogquod* means "to the top" or "above."

In the next word, *wadchuut*, the Ojibway *wadchu*, a mountain, is most plainly contained, and is written exactly as they pronounce it to-day, and always have.

As to the next word, *kah na matapit*, it is exactly "when he was set," or "when he had sat down."

The next word is not perfectly clear, but bears a strong resemblance to the Ojibway *kikinoamagun*, "disciple," or "scholar," which I have no doubt it is. The *eue* in it seems to say that they were male disciples, from *enene*, "a man," which, I think, is included in the word.

The next word, *peyauónuk*, has in the foreground the *pe*, signifying "coming to," or "approaching," and constantly prefixed in Ojibway to verbs to impart to them that meaning, as apparently here. The *ya* is the Ojibway *ija* or *icha*, "to go," and with the *pe* means "approached," or "came." The *nuk* probably expresses the *iniu*, "they" of the Ojibway. "They (the disciples) came to him."

The next verse translated means, "When he opened his mouth, he taught them, saying." The *kah* is a prefix to the verb, the same that appears in the verse before, and means "when he had done so and so;" that is, when he had opened his mouth. This is expressed in the idiom of the Ojibway, and is set down in the printed slip as an Ojibway would say it if he were describing the occurrence to a friend. It is idiomatically and properly expressed.

The verb following, *woshwunum*, is not recognizable by me. It must have become antiquated. The Ojibway word is *pakinan*, to open. The next word, *wuttoon*, is "his mouth," and as it is printed conveys to the ear about the exact sound in which the Ojibway speaks it to-day. They pronounce it now as if spelled *ottoon*. Anyone

can see that the difference between *o* and *wu* is almost imperceptible, when they are placed before the *ttoon*. This is to me one of the exact correspondences between the two languages of any in the printed slip sent me.

The next word, *ukkuhkootomauuh*, answers to the Ojibway *kikinoumege*, "he teaches," to which it has a strong resemblance. The next word, *noowau*, is "saying," and is the same as the Ojibway word *ewan*, "he says," a word in very common use, and is, to me, evidently the same word.

The third verse translated means "Blessed are the poor in spirit, for theirs is the kingdom of heaven." The first word, *wunnànum*, is the same as the Ojibway *onnan*, which joined with the terminal syllables means "joy," hence "blessed." It is a word in very constant use by the Ojibways to-day; and with them, as in the printed slip, the second is the strongly accented syllable.

The next word, *oog*, is the Ojibway *ogo*, "those," "Blessed are those who are poor," etc.

The next word, *kodtummunge*, is the Ojibway *kitunagosi*, "he is poor." As printed, it has very much the sound the Ojibway man makes when speaking of somebody being poor. It is one of the commonest words in the language.

The next two words, *teahoncheg*, are really one word, the *heg* having been improperly detached from the preceding letters, either from a mistake of the printer or because the *c* came at the end of a line, and so the *heg*, written on the next line, was thought to be a separate word. *Teahoncheg* means "in spirit." The Ojibways have exactly the same word for spirit, the human soul, with a slight reduplication of the syllable, *chichag* or *cheg*. The *teah* means "in," and in the Ojibway *imah*, meaning "there" or "in," the last syllable being the same as in the printed slip, the first changed.

The next word, *a*, is not the Ojibway for "for." The next word, *newutche*, is, I take it, the Ojibway *iniu*, "theirs." It contains the most striking and characteristic syllable of *iniu* or *inew*, with an addition.

The next word, *wuttaihéu*, answers in sound very closely to the Ojibway *wettaii*, with an addition by way of termination, which means "it is their property;" that is, those poor in spirit "have as their property," or "possess," the kingdom of heaven. The same word of the same sound, *wettaii*, is used in the Ojibway Testament by the Ojibway translator in this very place, although the amanuensis spelled it a little differently.

The next word, *kesukque*, is one of the most unmistakable Ojibway words, *kesuk*, or *kesik*, meaning "sky" or "heaven." The *que* is a connective, and is written *ke* in Ojibway, nearly the same sound. *Ketassoota móonk* I take to be the Ojibway *debendassowin*, inheritance. The *m* in the end of the word signifies in Ojibway that it is their peculiar possession. The termination *onk* signifies at or to; that is, the place where their possession is.

Respectfully, yours,

J. A. GILFILLAN,
Missionary to the Chippewas.

WHITE EARTH RESERVATION, MINN., April 5, 1894.

I write to correct some things I stated in my last letters to you, said correction being occasioned by my finding your favor of 16th June, 1891, in which you enclose some sentences from Eliot's Bible, the first three being the first three verses of the fifth chapter of St. Matthew, the same you lately sent me, and the others the remainder of the Beatitudes.

On looking at them, I see that the *kah* is not a prefix of the verb, as I at first supposed, but is the word "and." We have it now nearly the same in Ojibway, *kahye*, the final syllable being ellipsed by Eliot's Indian or added by ours.

The second correction I would make is that, in verse three, the *og* is not a separate word, is not "those," as I at first thought, which is spelled by us *ogo*, but is the terminal inflection of the verb *wunnànum*, and is the third person plural indicative of the verb. The third person plural is formed by us in like manner by adding the syllable *og*, as witness *inendum*, "think," *inendumog*, "they think." Seeing it separated from the *wunnànum* in the specimen you send me was what made me think at first it was the pronoun *ogo*.

In the other verses of the Beatitudes there is the same similarity to the Ojibway as in the three verses sent, as witness, in verse five, *ohke*, the same as our *ahke*, "land," or "the earth," both being substantially the same language, and the construction of both and the manner of inflection very much alike.

I am, very respectfully, yours,

J. A. GILFILLAN.

The first subject assigned for the morning was, "Work and wages for Indians." Miss Sibyl Carter was invited to speak.

Miss CARTER. I suppose what you want is the simple story of what I am doing and

how it commenced. It really began with the saying of an Indian woman at Wild Rice Reservation in Minnesota. I had met her once before, four years previously. I asked her to interpret for me to some other Indian women what I had been saying. I had been to China and Japan and the Holy Land, and I said, "Now, what have you been doing since I was here?" She looked sad and said, "Nothing." "What," I said, "nothing?" To think of four years of doing nothing made me tired. She looked as if I did not sympathize with her. "What is there to do here in the woods?" Did you ever think of that? I am sometimes asked, "Do not the Indians who have been in Eastern schools go back to the old way of living when they return?" A good many of them do. Why? Because they can not help it. They come home with clean clothes, and, when they are worn out, they have no way to earn more. What would you have them do—sit down on the ground and hopelessly mourn? There is no one to give them any work. These women lived 46 miles from a white house. They could not have got a day's work. It filled me with thoughts of what I could do to give them work. The only manual work I knew was lace making. I learned it to give work to an English woman in Chicago. I got the idea of teaching it to the Indians from seeing their brown sisters in Japan make lace. As I watched their brown hands flying across the pillow, I noticed that it was the same kind of lace I had learned to make years before.

Three weeks after landing I was at White Earth on the reservation; and, with the permission of Bishop Whipple, I began with a class of 12 Indian women in a log house. They had not the slightest idea what they were to do. They only knew it was something for which I was to pay wages. Many thought I was foolish to undertake such a thing; but I knew that the Indian women in making their beadwork used the finest thread and the smallest needles that are made, and they put a needle through every single bead. If they could do such fine work in beads, it would not be more trying for their eyes to do lacework. Indeed, they soon found that the white lace was not so trying to the eyes as the colored beads and the shimmer of the glass. It was a success from the beginning. My 12 women all learned it. Two white teachers wanted to learn; but both failed, while not one of the 12 Indian women failed. I have kept them working ever since. One of them who makes beautiful lace is 60 years old. (Miss Carter here exhibited many specimens of lace, some of it made by women over 60.)

I am not only teaching lace making, but I am trying to sweeten and purify the home, and get it ready for the girls who come back from the Eastern schools. I recall one girl who came back after three years at Carlisle, a very nice girl. She found her mother living in a birch-bark wigwam. The girl had learned dressmaking and sewing, and brought back her trunk of good clothes. When she saw the home (?) to which she had returned, she threw herself on her knees, and burst into tears. For three days she cried all the time that she was not asleep. She would not touch food. The mother came to me, and said, "I very unhappy. White people come, say, you send your girl to school. I send her. She stay three years, long time. My heart get hungry for my girl. She come home. She throw herself down on ground, and cry and cry. I not know what do."

I said, "I think I know what is the matter. Your daughter has been taught to work and to keep everything neat and clean. Where is her trunk?" "Oh," she said, "she feel bad about trunk; no room in wigwam for trunk. Trunk outdoors in rain. Things get all wet." "All that girl wants is work," I said. "Send her to me at the hospital." And she did, and she is to-day one of my very best workers. I was happy to be on the ground to take that girl by the hand and give her employment and wages.

Another of my workers is a little hunchback creature. She was nothing but a filthy bundle of rags when I first saw her. It did not look as if there could be a soul there. I asked her to come in among my first 12 women. They all thought I was wild. This (holding up a beautiful lace handkerchief) is a bit of work wrought by this little hunchback girl, whose beaming face and clothes are now spotlessly clean. I wish you could see her house, clean and tidy, and all through the influence of this work.

I have now six lace schools, and we are making a great deal of lace. I wished to have one large piece made that I might show what they could do. Mrs. Pierpont Morgan gave me an order for that (a large piece hanging upon the wall), for which she paid me \$200. Eighteen women worked upon it for three months.

When I first went out to work among the Indians I must confess I did not love them. I was sorry for them, and felt that the work ought to be done, and that I ought to do it because I saw the need. To-day I can freely say that I love a good many of these people as much as I do many of my white friends. Old Good Thunder, for instance, is a Christian gentleman from the crown of his head to the soles of his feet. Dr. Eastman is another.

When I was in St. Paul I met with an accident, and I sent for Dr. Eastman. I believe in him, for he is a gentleman as well as a good doctor. He helped me, too.

I believe that we must use every chance to give these people work. It is the best kind of help for them. My affection for the Indians is returned, and the women have given me the sweetest little Indian name, which, translated, is the "Willing-hearted Woman." Certainly my heart is willing to make them happier and better, if I can.

The work is spreading. I went to Red Lake by invitation of an Indian woman. She told me a pitiful story. She had tried to make some beadwork and sell it, because some of the white women had said that she was lazy. So she made this beadwork, and brought it to the agent, who said, "I don't want that stuff, it is so dirty and ugly." At last he picked out a few pieces, and sent them to St. Paul. By and by a little money came back, but it was so little that it was not worth while to try any more. "We hear," she said, "that you have got teachers down at White Earth. We want a teacher here." I could not stand it, and I promised her one. The next morning she brought me a beautiful mat made from rushes, saying, "I bring you present. I am not lazy woman. I make you mat with pretty colors. I put it at your feet for present. I want you to put it in your room. Every time you look down at it you say, 'Indian woman wait for work.'" I got a teacher for that place. I couldn't help it.

Another time I saw a woman at the gate, and as she came in I said, "What do you want?" She began to speak in Ojibway, and I took her to an interpreter. She said: "I live by the Wild Rice River. We hear about your paying wages down here. We got no work. They gather together, ask me to come down here, ask you to give us teacher. We want to earn some money, buy some food, some bread. You help us." By and by I asked her how she came down. "I walked," she said. She had walked, carrying a great, fat Indian baby, 18 miles through the snow to beg for work. I gave her some dinner, and she went to see our Indian deacon. The next morning I sent for her, supposing she was still there. To my surprise, I found she had gone home the afternoon before. So she walked 36 miles that day, carrying that heavy baby, through the snow, to beg for work. Do you wonder that I got a teacher for that place? I could not help it. I could not resist it. And there is a specimen of her work [exhibiting a piece of lace]. Last spring her husband was out chopping wood and was killed. She dictated a letter to me in broken English, in which she said: "God did take my husband. I got five little children. You give me plenty work, I take care of them. Not forget, give me plenty of work." Not a word of begging, not a word of asking for rations or for help, only "give me plenty work." Wasn't it brave? Love them? Of course I love them; I can't help it.

I have now six schools and the hospital to care for. What are you going to do? Do not some of you feel as though you would like to try this work? I wish some one could put it into your hearts to go out there and start industries. There are other things they can learn besides making lace, though lace making has a wonderfully civilizing effect, especially in effecting cleanliness. They are very proud of being able to keep it so clean.

Here is a lace handkerchief which was sent to me from Athens, Greece, made by the women there. When I showed it to my women they were silent. "Don't you like it?" I asked. "Yes." "Isn't it pretty?" "Oh, yes." "What do you think of it then?" "Very dirty," they replied. It was very dirty.

As to what they can earn. I provide the materials, because I want to encourage them. When they work constantly, they make from 50 cents to a dollar a day. Some of this lace brings \$10 a yard, and it is well worth it. One old grandmother is supporting in this way her decrepit daughter and the daughter's four or five children. They never make any two things alike. They are Japanese in that respect. I have tried to have them make carpets of those rushes, but they will not make two pieces alike.

Question. Who makes the designs for the lace?

Miss CARTER. I generally do. Sometimes the Indian women design them themselves. They will get designs from carpets, church windows, from leaves and flowers. Many times they take a geometrical pattern from their beadwork.

Miss CARTER here exhibited some bead napkin rings beautifully made. A dozen people gave orders for them at 25 cents apiece.

Mr. WELSH. Couldn't you get the Indian women to put up small wild fruits?

Miss CARTER. Yes, I think they could do it. The wild berries are most delicious. If some lady who knows how to make jam and can blueberries and cranberries, which grow in great abundance, will come out there and establish that industry, I will give her a home.

Mr. BRYAN. Couldn't the wild rice be cultivated and sold to some extent?

Miss CARTER. Yes, I think so. It is delicious.

President GATES. The great thing is to awaken a sacred discontent. If you start new wants on their part they will make new endeavors.

Captain Pratt, of Carlisle, was introduced.

Captain PRATT. I feel lifted up by what I have heard this morning from Miss Carter about her lace making, and my good friend Bishop Whipple's stories of his experiences. But there are other pictures we ought to look at. These Indian people are not all æsthetic. They are not altogether sympathetic. There is much hardness to be overcome, and there has been a great deal of hardness overcome as we have gone on in the conflict.

In 1867, when I received my appointment to the Regular Army, I felt doubtful as to whether I could fill the place. The second day after I reported to my company at Fort Gibson I was placed in command of a party of scouts, made up of Indians whom I thought I had been sent out to kill, and was ordered to take them and escort the general to another post. When we arrived at the other post that party of scouts was sent back, and I was put in charge of another party at a new station. A few days after there was shooting in their camp under the hill. I ran to the top of the hill and found that a number of them were drunk, and were shooting at each other. I took three soldiers and soon captured the most violent. It did not seem best to punish all. So I found the one who brought the whisky into their camp and I took him to the guardhouse, and when he was sober put him on the brow of the hill, where all could see him, and gave him a stick of cord wood to carry, and kept him at it until he was tired. The effect was excellent. That party gave me no more trouble from using whisky.

Later an Indian agent located five whisky ranches on his reservation just south of the Kansas line. I was sent with 20 men to capture the whisky sellers and seize their property. It was in February and 14° below zero when we started, and during the five days we were out the temperature ran as low as 30° below zero. We arrested 14 white men, destroyed above 700 gallons of whisky, wine, beer, etc., and captured quantities of ammunition and guns and a great many horses, mules, buffalo robes, and pelts. Such experiences as these will give you an idea of what the other forces have had to contend with. Captain Wotherspoon and General Howard can duplicate these experiences.

At Carlisle I am in correspondence with many parts of the field. My Indian students are always writing to me, and in that way I get an inside view that could be gained in no other way.

Judge Strong has spoken about lands in severalty. Lands in severalty are so arranged that the Indians do not have to pay taxes. Many think that is right, that they ought to be relieved from all the responsibility possible. Then there have been some remarks about leasing the lands and letting the Indians sit on the fence, and have the white men do the work. They will do it if you give them half a chance. If the Indians are relieved from paying taxes, the responsibility of supporting the necessary expenses of the community is placed upon the white men. They must build roads and schoolhouses and jails, and so forth, so that they have to do double duty. The result is that lands in severalty becomes one of the best schemes that could be thought of to make the white man hate the Indian. The white man goes out on the frontier, takes up 160 acres of land to make a home for himself and family, and then has not only to pay his own taxes but his neighbors', too; and consequently, when he finds the hard position he is in, he will do all he can to get rid of such a neighbor. And so would you and I. The white man resorts to about the only means which he can use without too much publicity. He doses the Indian with whisky. So we find the Indians on the lands in severalty reservations, lying around drunk on the streets of the neighboring towns, going to pieces and becoming good for nothing. And there are people who say we should not take children away from such influences.

One of my good teachers out on a Western reservation, looking up children, says she drove by a beautiful rise of ground overlooking the river, with trees close by, where she saw the evidences of a large camp. She said to the Indian who was driving her, "There has been a large Indian camp here." "Yes," he said. "A man came out here with a big tent. He had a little steam engine. He set up something that goes round, and that had wooden horses and elephants, and tigers; and his little engine made it go round. And the engine whistled; and the Indians came and camped in great numbers, and they rode round and round. And, when the white man went away he carried off \$3,000 or \$4,000." The devices to render the Indians idle and good for nothing are innumerable.

The Great Being who gave us this beautiful world made man; and, as the crowning and last part of his work, he put him over all that he had made, and he announced that in the sweat of his face he should eat bread. The moving principle of Carlisle has always been along this line. Once, when Senator Teller was present, one of my boys made an apt quotation. The students voluntarily recite verses of Scripture at our Sunday evening meetings; and this boy said, "If a man won't work, he shan't eat." That is the spirit of the Carlisle school.

I believe that the Almighty intended a great lesson to all mankind when He sent so many different races of people into these United States. I do not think there are

to be any exceptions in the brotherhood of man; and He will send us the thunders of Sinai and the earthquakes, war, and pestilence until we come to His method about it. The man that will not work shall not eat. We are told that we are all created of one flesh and blood, and that we are all brethren, and we are given an example of what it is to be a brother, and that example showed us by example and taught us by precept how to be a brother. He went about with His modest fishermen disciples everywhere, and associated with publicans and sinners, whom He came to save. Thank the Lord for that. That helps me, because, like the old darky, I am an Episcopalian in one particular at least; I am a miserable sinner, always doing the things I ought not to do, and leaving undone the things that I ought to do. The Lord washed His disciples' feet. He did not make them kiss His big toe. We want that kind of a Lord now, and every lord that is not of that kind ought to be driven out. He does not belong in this country, neither he nor any of his forces. (I hope you will take that down, Mrs. Barrows, just as I said it, for I want to be held to account for it. If we have to fight, I want it to be out in the open, fair and square, and then we shall know what we are at.)

We should in the first place realize that the Indian is a man created as we are, and that he is capable of doing the same work that we do. When I look at the Indians I see that they stand erect. When I talk with them they reason. They have the same body that I have. As I deal with them I realize that the only difference between us is a difference in opportunities. If young Indians can be placed where they will have opportunities and somebody to instruct them they can make lace or they can do anything else; and all this continual holding them back and letting them wait, as though they were cripples and incapable of development, is nonsense. If there is not morality it can be cultivated. If there are not skill and industry they can be acquired. There is no end to the possibilities. My boys have gone into the football craze lately, and have even been so ambitious as to make arrangements to play with several prominent college teams; and I am sure they will give these teams hard contests. It does not make any difference what the line of effort is, whether it is holding the plow or learning to read and write, making lace or playing football. Whatever is to be done can be done and ought to be done now, and there should be no closed doors.

I can imagine all Senator Dawes said about the five so-called civilized tribes, for I know something about them through my early army service among them; and he will bear me witness that I have occasionally mentioned them to him down in that den he used to have in the Senate end of the Capitol, where we used to talk over the Indian question. If, then, the Indian is a man, if he only lacks opportunity, if he can be developed all along these lines, he ought to be, and that *now*. I would give every Indian all the land he is entitled to. An equal division is to me the right thing to do. I would distribute the land, and let them sell, rent, or lease it, if they want to, so that they would have personal rights and personal accountability, which is the only basis upon which to build successfully. We must have a base to build on. We are giving them a false basis when we undertake to make farmers out of all of them and release them from taxpaying. In our nontaxpaying lands in severalty we have simply reduced the reservation. They are still together, and the missionaries and the Indian Department seem determined not to let any escape from the tribes. There is not a particle more cruelty in taking a child from a degraded Indian parent than there is in taking one from the Anglo-Saxon parent of Five Points. The missionary spirit of the country is doing that all the time, and calls it "a great Christian work." It claims, and I admit, that it is serving the Lord to take the children from the parents in the slums of a great city, and send them out West to grow up with the country, to become governors, bank presidents, professors in colleges, etc., as their reports tell. They do not send them back to convert their parents—not a bit of it. If they did their work would fail just as much as we fail when we send Indians back to degraded homes and influences.

President GATES. I think that is clear logic.

Voice from the audience. Yes; that is four-square.

Captain PRATT. I want to be kind to them, but I have had to punish. We have had hard boys at Carlisle who had to be straightened out. Boys I have punished are among those that think most of me to-day. They are among those that write to me oftenest and remember me best.

President Gates recalled an instance when Captain Pratt had mentioned to him a case of discipline that had occurred at Carlisle. He said he had never known a man who exercised what is called shrewd common sense, combined with a Christian, loving spirit, in such a way as Captain Pratt did in the direction of punishments. "I made up my mind," said President Gates, "that the man was put there for that special work, and that he must follow his own ideals; for it seemed as if some of his punishments were absolutely inspired."

Captain PRATT. My way of getting the Indians to work would be simply to follow the same methods we do with all others, and give them work where the work is, not

to try further to keep them together, and continue thinking we are somehow going to accomplish great things by continuing the tribes. The system is not American. I do not believe it is Christian. I do not believe the Lord ever intended it that way. Let us get them into our industries. If I can take children from any tribe—and if there are any Indians in this country that I have not tried I will take hold of them—and send them in considerable numbers into our communities, and they by good conduct and industry win a welcome, people want them, and the Indians learn to want to be there, and to enjoy their new life, why can not it be done for all? We are dealing with 250,000 people, that is all. It is this hesitancy, this hanging back from doing the right and proper thing, that is in the way. We can put our Indians into all the lines of our life if we ourselves only conclude to do that.

Last year I carried from here down to Carlisle Mr. Wright, the Indian minister, who sang and spoke to our convention. He talked three nights to our students. I have not heard the great evangelists, but I doubt if any man can get closer round the hearts of people than Mr. Wright. Yet he is an Indian.

If there is that nice quality in Indians which enables them to make lace, and do all these other things, why not let us teach them, and utilize them, and end this Indian problem at once? I do not believe in husbanding their so-called property. I do not feel bad because somebody once bought Manhattan Island for \$37.50. It was all it was worth at that time. It was worth nothing before that. There was no such thing as barter and sale of land. The Indians moved from place to place, as they do now. Senator Dawes once said you might as well give them so many beans as so many dollars; and that is true. This folly is fully shown by the condition of the Osages to-day. In 1868, when we bought their lands and started a great fund for them, they numbered 4,246. Their lands brought \$9,000,000. This went into the Treasury, and interest at 5 per cent was paid them per capita semiannually. They settled down on a tract of excellent land fifty miles square in the Indian Territory. This land the white people constantly covet. The Indians hold it in fee simple. They have been receiving their interest money ever since, and they do not work. They hire white men to do their work. They get to-day about \$260 per capita per annum. Every man, woman, and child receives an equal share. It is paid in installments every three months. There are but 1,500 left. The result is idleness, disease, whisky, and every destroying influence that Anglo-Saxon greed and genius can think of. The great Catholic Church has had its grip on them, and has had a mission among them for many years, and has driven out the other churches; but it has not saved them. Before long this tribe will be gone. The Chippewas of Minnesota have a treaty which will produce many millions of dollars for their use in the same way; and the result will be just as disastrous.

PRESIDENT GATES. We can not yet move the Indian Department out on the reservations. Captain Pratt maintains that the time to help the Indian and make a man of him is after he has run through all his land and money. Then we may have a chance at him. There are others who do not feel it is quite the fair thing not to give these men a protected chance as they step out on to the stage of life. We have here in this conference considered some such question as this—from the funds now held for the Indians can not provision be made for the maintenance of schools, and courts of justice, and the building of roads. We ought to be able to prevent the iniquity that has been spoken of. Out of the 250,000 Indians, less than 58,000 receive rations from the Government. About three-quarters of the Indians are now self-supporting. Miss Sparhawk has a plan for providing the Indians with industries. She will now speak to us.

MISS SPARHAWK. When we hear of these things that are being done, and see these works, our hearts burn with interest. We say, this is a great deal; but what can we do? The Indian has been barred off from us by language, by habits, and by distance. There is a certain class who are no longer separated from us by language, who have been trained like ourselves, the young people in the Indian schools. I suppose there are no children on the face of the earth for whom there is no thought of building up their personal future except the Indian children. When white children pass from school, they have their parents or friends, and the surroundings of industry. They have every incentive to work. If they do not work they are looked down on. We see the danger even under the most favorable circumstances that will come to these young Indian men and women who have left school. Why not put them at work? There is intercourse with the reservation, and there are workers on the reservation and workers here.

There needs to be some organized effort, so that between them and the people here who are willing to help there shall be a direct channel of communication. To this end there has been formed an Indian Industries League. Mr. Smiley is one vice-president, and Mr. Welsh another, and other persons whose judgment you will value. This league interferes with no other work. It helps to carry on all other work. The object of the league is to open individual opportunities of work, to take these young people just at a time when they go home from school with all their

aspirations, and give them something to do. If they have learned harness or shoe-making, how are they to carry it on? They can not build factories, for they have no power. Yet they have learned to be useful. You remember when all the country was wondering what was to be done with the Apaches; and, when one State after another had no room for them, there was one exception, Pennsylvania. Some of the people in Pennsylvania, sending to Carlisle for help, said: "We have heard that the Apaches did good work; send me an Apache." Now there is a difference between Indians in the tribe and separate Indians after they have been well trained. If we really want to do any work for the Indians while the laws are being changed, let us take that Saxon word which has opened more doors than any other, and begin. Will you not join this league, and interest people in it when it is possible? If it is possible to give employment on the reservation, that is part of the league's work, to build up self-supporting industries in Indian communities. It is not to keep them all Indian. This is a cosmopolitan age, and the last thing we should do is to build up a fence round them.

Rev. John W. Harding was introduced.

Mr. HARDING. The Florida Seminoles are a part of the Seminole tribe that were not removed to the Indian reservation. They hid in the Florida everglades, and there they are still. It is difficult to take their census, for they are extremely reticent. The everglades are vast areas of saw grass, interrupted here and there by a timber belt and occasional islands of elevated ground. It is supposed that these Indians number about 800. Colonel Ingraham, one of the commissioners recently appointed by the Florida legislature to investigate their condition, went across the everglades from Fort Myers on the west coast to Miami on the east side, and became considerably acquainted with their condition. He found it quite impossible at present to make any allotments of land pursuant to the act of Government. The old Seminoles, to whom the young people, who are more progressive, look up with respect, have the entire control, and they are exceedingly shy and suspicious of the white men.

There are three tribal divisions of these Indians, although they all unite in one nation at their big annual corn dance in July. They meet to revise their laws, execute penalties, and elect their political chief, war chief, and great medicine men, and to render a general adjustment of their affairs. It is a reunion of the Cow Creek Indians, who live behind Fort Pierce, near St. Lucia River; the Big Cypress Indians, near the Callahoochie River, southeast of Fort Myers, and the Miamis, on the east side of the everglades, near Biscayne Bay.

Colonel Ingraham, on his way to Miami, was hailed by Billy Harney, a wealthy and notable Indian, always friendly to the whites, and who has suffered the penalty for it in former years of having his nose cut off. He showed his good will by inviting Colonel Ingraham to stop with him with his twenty men. He found Billy Harney in a good frame house, which was floored with beech timber and wainscoted. There were good beds and mattresses, with mosquito bars. Besides all sorts of cooking utensils, he had a sewing-machine and eight Saratoga trunks. The colonel was very well entertained. Billy had seven well-mannered children, and both they and his wife were well clad in civilized fashion. Billy himself was very handsomely dressed with finely embroidered moccasins and a shirt made on the sewing machine by his wife and daughters. This gives an idea of the civilization some of these Indians have attained. Robert Osceola, grandson of the famous chief, has five frame houses and cultivated lands adjoining. I have seen these Indians at Jupiter Inlet and Lake Worth, where they frequently come into contact with very finest civilization. They are a fine race, superior to Indians in general both in physique and keen intelligence. Surrounded as they are more and more rapidly by civilized environments of the highest order, and accessible as they are, they ought to be looked after speedily and effectively. Bishop Gray, of southern Florida, has special charge of them now, since the Women's Indian Association has made over its mission to the Episcopal Church. They have no legal status of any kind either before the State or the United States, being considered as rebels and aliens.

Question. Is slavery still continued there?

Dr. HARDING. It is commonly reported that there are probably a few negroes who have been held as slaves since the Seminole war, and know nothing as yet to the contrary. Many negro slaves were taken from the east coast plantations during the Seminole raids, and held in their former condition.

Mrs. QUINTON. The mission to the Seminoles of Florida was opened by our association in June, 1891; and Dr. Brecht was nominated by the association and appointed by the Government as its agent and industrial teacher, and Mrs. Brecht was our missionary till we transferred the mission to the Episcopal Church of Southern Florida last Christmas. At the request of Bishop Gray, Mrs. Brecht still continues her missionary work; and both she and Dr. Brecht have won the confidence and gratitude of the Indians. There are few "Billy Harneys" among them. He is at least exceptional, as I know of none such among the Seminoles, where our own work has been.

The homes there, as a rule, are roofs on four posts, without any walls whatever. They are people of ability and of natural refinement, and they are not idle. They support themselves, raising rice, preparing alligator skins and bird plumes, and selling these. They are as worthy, I think, as they could be under their circumstances. Two stations more are needed, one near the east coast and one nearer the Gulf, to meet the needs of all. They are ready to work, and we have much hope for their future. Our association bought 400 acres of land, and sold 80 of them to the Government; and on these Dr. Brecht put up buildings and did preparatory work. This place is not in the Everglades, for one could not plant a mission home where the land overflows with winter rains; but it is on the land nearest which does not thus overflow. We also built a lodge at the edge of the Everglades, where, for weeks together during the dry season, visitation, teaching the children, and industrial and medical work are done. The Seminoles were more timid and distrustful than any tribe I have ever known, and the task of winning their confidence could not be rapidly done after our past national relations with them. The progress has been quite as fast as one could reasonably have expected. Kindergarten work has begun at the lodge, and a school will follow, I think, before long.

I believe that the Indians of the whole country are ready for work, and that the question is only, How shall we provide this work? The parents, grandparents, and little children can not leave the reservations. They must be provided for where they are, and the Industries League, which has been commended to you, will, we hope, help toward finding work and markets for them. We all see the need of such help. We have talked with Government officials, but these alone can not provide all. This league, which arose in our department of libraries and industries, of which Miss Sparhawk is chairman, proposes to deal with individual cases, and it must raise money for this. The industries in connection with our own association have been many. Every missionary from our society to Indians has been instructed to work six days in the week for their civilization and in teaching them to help themselves. "Helping Indians to help themselves" has been one of our mottoes. Our home building department did a good deal in this way, our young people's department has done much, and Miss Sparhawk has done a great deal. We have also asked Miss Carter to send her lace-making teachers to some of our missions, and still hope for some of them. Our association was not only the first Indian association to ask for "lands in severalty, citizenship, and universal Indian education," but to ask that "industrial schools" might be established among Indians, and that they might be "allured into civilized work." The way is all open, and only cash help is needed to found many industries among them. There are certain sections where much help is needed, and the darkest Indian situation, morally, industrially, and politically, is among the nineteen Pueblos of the Southwest. These people could be made to understand that they are citizens, and I wish this conference had time to well consider their needs and those of the Mission Indians. In some places Indians are prevented from realizing their privileges and duties as citizens of the United States, and it seems to us that attention should be called to this matter. When citizenship is practically forcibly prevented, this conference might most appropriately consider such cases. Our own mission field is where no other missionary work is done, and we have had the joy of originating thirty-five missions during the last ten years by the Divine blessing.

Bishop Whipple was asked to answer a question about the Christian Indians.

Bishop WHIPPLE. I have been asked if it was true that the Christian Indians joined in the outbreak in 1862. That is a very old lie, and a shameless lie, and a lie that has been answered again and again; and now I will answer it, so that no one will ever have to ask the question again. The leader of the outbreak was an uncivilized hostile Indian who visited Washington, and for whom the Indian Bureau purchased a suit of white man's clothes. He wore those to have his photograph taken in; and that photograph was in existence after Little Crow was killed, and the papers throughout the country published it. That was the only time that Indian ever wore a civilized dress, when that picture was taken. My own mission among the Sioux was only two years old; but there are men who have gone to their rest—two very noble men, men that I dearly loved—who could have told you, as I think Dr. Strieby will tell you, that there never was connected with our missionary association a more noble man than Rev. Dr. Williamson.

It so happened that immediately after the outbreak nearly \$2,000,000 that belonged to the Sioux was confiscated, and \$7,500 was to go to the friendly Indians who had saved the white captives, of which \$2,500 was to go to one Indian who had rescued the missionaries and others from the Upper Sioux Agency. The Government sent a special agent, and after he had spent much time he sent back word that it was impossible for him to make a report, and so the Secretary of the Interior asked if I would make the report. I visited Dr. Williamson and asked him, "Do you know of any of your Christian Indians who was engaged with the hostiles in the outbreak?" He answered instantly, "No." I make the statement openly, and I made it in the presence of

2,000 men at the unveiling of the monument to commemorate that sad event, that there was not a single life saved during that Sioux massacre that was not saved by a Christian Indian.

One thing more. Immediately after this outbreak General Sibley, who had known these Indians for forty years, who had been the factor of the Northwest Fur Company, was appointed to go and punish the Indians and defend the border. With his knowledge of Indians he selected as his scouts the Christian men who had been brought to Christ by these missionaries.

One thing more. When General Custer, who was well known as an Indian fighter, was asked by the Government to make a reconnoissance of the Black Hills, he sent to us and asked that we would send him 30 scouts. We had no time to make a selection, for he said they must be at Lincoln on Wednesday night, and the message reached us Sunday morning. We picked up the Christian Indians that were willing to go and sent them to General Custer, and when they came back he sent a letter, which I still have among my papers, saying he could not allow these Christian Indians to return to the Santee Agency without bearing testimony to their character. "I do not simply say," he went on, "that they have been competent as soldiers, but I do say that you can not find a village in Minnesota that will turn out 30 more exemplary men. Among other pleasant instances, I remember one Sunday afternoon I was sitting in my tent, when I heard in the distance the familiar sound of 'Rock of Ages,' and knowing that cavalymen are not noted for hymn-singing, I reconnoitered, and I found that the only men of my command who were engaged in this singing were the sons of men who had roamed over these prairies in barbarous wildness. May the good work go on." And he signed himself "Geo. A. Custer, colonel commanding."¹

The Christian Indians at the time of the outbreak rescued 200 women and children. One of them carried to his grave a certificate signed by General Sibley, saying that he was entitled to the everlasting gratitude of the American people for what he had done.

If you wish for any other testimony with regard to Christian scouts, ask any officer in the Army. I believe that you have never heard from the lips of any officer of the Army any imputation cast upon the work or character of faithful missionaries. I have never heard it.

I was asked another question—if the Indians were not a very stolid people, or if they relished a joke. Well, I will tell you a little story. In the dark days of our Indian affairs a politician was appointed to do some very dishonest work. He desired to impress the Indians with his dignity, and he dressed himself in a full suit of a colonel's uniform, with a sword by his side; and he began in this wise: "The great father at Washington has had a great deal of trouble with his red children, and he has come to the conclusion that he has made an awful mistake. He has been sending to you civilians when he should have sent warriors. He has found out that the Indians are a race of warriors. And so he looked over the country and found me," and then followed his dishonest speech. When he was through, an old chief rose, and looked him over from head to foot, and then slowly replied: "Ever since I was a little boy I have heard that white men had these great warriors, and I always wanted to see one. I have looked on one; and now I am ready to die!"

Miss Hoppock, of Redlands, Cal., showed some specimens of Indian work in pottery and baskets, and said that she should be glad to take orders for baskets especially, as they could be sent by mail. She had visited eight reservations, and spent three months on one. The land where many of the Indians in Southern California are placed is alkali, where it is impossible for them to make a living. They will sometimes plant three crops, and not even then be discouraged. They are willing to work. If a desire for anything better can be created in them, they will certainly fulfill one's most eager expectations. The field matrons who were asked for by the women's association are now in the field under pay of the Government, and are doing excellent work. Among other things they teach the women to sew, and these Indian women are so eager to learn that they will come hours beforehand so as to be sure to get the whole of the lesson. The children are eager to be in school, and some of them walk 10 miles a day to attend. The teachers are very devoted, and are doing good work. They are hampered by the agents. If an agent does not happen to want to help the matrons, any requests from the teachers are put aside. If we had more women like Miss Carter, and good agents, most of the problems would be solved.

The president asked Capt. W. W. Wotherspoon to speak.

¹ At the request of Bishop Whipple, I gladly confirm what he has here said with reference to the trustworthiness of these scouts. My husband, Rev. Samuel J. Barrows, made the expedition with General Custer to the Black Hills in the summer of 1874 as correspondent of the New York Tribune. I have often heard him refer to the intelligence, honesty, and general good character of these men, to the bravery of one of whom I owed the priceless letters that were sent through the wilds by his trustful hands; but never have I known till now where the scouts came from or to whom they owed their training.—EDITOR.

Captain WOTHERSPOON. I think it rather unfortunate that I should follow after Captain Pratt and Miss Carter; but it may have its instructive aspects, too. Miss Carter has been chasing Indians with a bobbin: I have been chasing them with guns, until the last four years. For twenty-two years I have seen the Indian, sometimes with his face painted, sometimes in fights, sometimes as prisoner, and sometimes wounded. About four years ago I was placed in charge of the Apache prisoners at Mount Vernon. The Apache ethnologically belongs to the Athabascan race. He never builds a house. He lives on anything he can find. His very name means wild. The subject of "work and wages for Indians" has a fair illustration in the case of these people. When I went to Mount Vernon and took charge of them, I found them in a deplorable condition, almost ready for revolt. I was given absolute control; and the first words I said were, "You are going to work, and there is to be no more monkey business." I said to them, "You have been fed and housed and clothed, and you have not done anything for it. You can now go out, and earn as much money as you choose, and you can have your money, and do what you like with it; but you have got to work. You have got to work even if you have to work for nothing." They rapidly learned to do almost everything, and they did earn money. What is there that an Indian can not do? I do not know of anything. There is nothing that an Indian can not do that we can do, except overcome the pauperizing influences that we have imposed on him. Those Apaches cut 4,000 cords of oak and 5,000 pine logs. They got their money and spent it. They built a village of 100 houses, doing it all, building chimneys, plastering, matching lumber for floors, made doors and windows, cooked their food, washed their clothes (and the women starched their cuffs and collars, or they got the mischief if they didn't). Some were basket makers, and some were pottery makers. Every one of them could do something. They were excellent vegetable gardeners.

The question comes up, What was the estimate in which those people were held by their white and colored neighbors? If we are going to understand the characteristics of a race we have to take the individual as we find him, and from the characteristics of the individual estimate the characteristics of the race. After twenty-two years' service among the Indians I do not hesitate to say two or three things. In the first place, I have never known an Indian, not debauched with rum, who was a liar. I have never, in my life, known a wild Indian to tell me an untruth, even when it would redound to his own benefit. In cases where they were accused of drunkenness or crime, I have asked, "Are you guilty?" and they would say yes or no, according to the fact. If they said no, there was no use in trying to find evidence. If they said yes, which they did in the majority of cases, they took their punishment. Once in a while they would say, "I did not know I was drunk. Perhaps I was. Send for so and so, and he will tell you all about it." We would send, and they would come and testify, and, if the testimony was true, the man would say, "Yes; that is right, I remember that," or "Yes; I did so and so."

Another thing. I have never known in these twenty-two years, outside of these debauched Indians, of a single thief among them. I have never known an Indian to steal anything. My house was open all the time. An Indian built my fires, and attended to everything about the house. My interpreter, living in their village, always left his house open and his valuables exposed. Tobacco and cigars were always in sight, yet in four years I never knew of a pinch of tobacco being taken.

They are usually kind and affectionate to their families. They do not overwork the women. The man takes his full share of the work of supporting the family. They are good to their children. They are kindly to their relatives and generous to their foes. If these virtues are at the foundation of the Indian's character and of the Indian race, what is the matter with making a man out of him? Are they any worse or any better than these gentlemen flung in a steady stream on our shores from Hungary and Italy? I believe there is a saying that you can lead a horse to the water, but you can not make him drink. I do not know if any one ever tried the experiment of taking the water away for a while. If you did that, I think they would soon drink heartily. That is the way with work. The Indian does not work. Why should he? Why should we? There are no people in the world who will work for the mere pleasure of working. If we are going to give him annuities, feed him on rations when he is hungry, clothe him when he is cold, what inducement has he to work? But take him away from the water. A little period of starvation will do him good. Let him have his land, and let him sell it and squander it if he choose. The Indian does not want to die any more than anyone else. His capacity for work is great. He can do anything he will. Is there anything that prevents him from going to work if he wants to? There is nothing to prevent except the reservation and the agent. He is always evil, and always will be. His whole interest is to keep the Indian there, that he may feed him. If you can get the Indians away from the reservation and spread them abroad among our people, they will do as any other class in this people does—work—and you will not have to support them. You will have in the Indian a sober man and a good citizen. Because he does not have to

work is the reason that he does not work, and that is all there is about it. He will work if he has to, and will do good work. Wherever these Indians have been hired out and employed by white people, they have always earned the same wages as the white laborers with whom they competed.

On one occasion the white people, negroes, and the Apaches were to work together on a certain building. The Indians came back one day and said the whites and negroes had struck. They would not work with the Indians. "Why don't you go down and say that you will build the house yourselves?" I asked them. They hesitated. I told them to go back and say that if the job could be given to them, I would superintend it. The contractor said, "All right;" and those Indians put up the building and got the full wages that the others would have had, and I think they were preferred to the other laborers. These were the Apache prisoners of war, the most bloodthirsty people we have ever had to do with, the very mention of whose name was enough to frighten the women and children of Arizona. They had never been under the fatherly influence of the agents. They were wild and difficult to manage. When we were both in Arizona, when they were not chasing me, I was chasing them.

At Mount Vernon they had their own village, their own hospital, schoolhouse, and all that was necessary; and everything was going smoothly when I left them. That was last March. Since then these Indians have been moved to Fort Sill, in the Indian Territory. Why, I do not know.

Question. What are they doing there?

Captain WOTHERSPOON. Eating rations! An officer from the War Department came, and asked what I recommended. I told him the only thing I could see as justice to these people was the termination of the pauperizing influences whose work was bringing about their annihilation from disease and slothfulness, that we owed them a fair start. I looked over the country, and I thought that in the mountains of North Carolina or in Tennessee they might find a climate more nearly like their own, where they could live and earn their own living; that it would not hurt them to work hard; that they might be told that after three years they would have no more assistance from the United States except that their children would have schooling. They asked me for an estimate, and I said I thought \$150,000 would do the work. But, instead of adopting that plan, they have sent them out to the Indian Territory. If the plan of the Government is to settle them and let them take up land, and in three or four years end the support, all right. But I say, Down with the reservation! down with pauperizing by feeding and clothing them! Take care of the old people, yes. But what is the matter with our public schools for the young people? They are good enough for us. Get them out of the reservation, put them three here and four there, and so scatter them. What do we do with the boys from our houses of refuge? We put them where they will have a fair chance. Captain Pratt says that his boys have a fair chance. There are unlimited chances for them, if we can get them away from the reservations.

In my opinion, after twenty-two years of pretty close contact with the Indian, I am convinced that he has all the characteristics that will make him a first-class citizen and a good man; that he is able to work, and will work if you make him, and that he will die a pauper if you keep up the present system of feeding and clothing him without exertion on his part.

Mr. HARDING. If you had been allowed to go on sending them out to get work and receive pay for it, could they not have been absorbed into our civilization—these Apaches, I mean?

Captain WOTHERSPOON. That question was fast being answered when a new departure was taken. There were 400 prisoners, and the question I had to solve was what to do with them without any money. I taught them to farm as market gardeners; and I hired them out, a few in a place, until I had 55 out, giving excellent satisfaction, and the Government not paying a cent, the people paying for whom they worked. I should in time have scattered them, so that they could never have come together again as a band. Then the Secretary of War came down and started this matter of enlisting them in the Army, and, against my suggestion, directed that they should be enlisted as a troop there. The men were out at work on the farms, and they had to be brought in to be enlisted.

Mr. A. K. SMILEY. Fourteen years ago General Whittlesey and I went and visited the Apaches, who have the reputation of being the worst Indians in the country. It was after an awful raid on the whites, and they were held in a military camp and under the closest surveillance. We had a conference with them, and they talked just as you would talk. They wanted homes. They wanted land in the mountains where they could go to work. They wanted the whites to let them alone. Then we had a conference with the military men in charge. Military officers, as a rule, are friendly to the Indians and have a great admiration for the Indian character. I have heard that again and again. Colonel Purington had charge of the military post beside them. He said that when he wanted to send a faithful man he never

sent a white man; he always sent an Indian. The Indians would travel a hundred miles in a day. "I can not trust my own soldiers as I can those men," he said. They have some qualities, I believe, which are superior to our race. They are braver than the Spartans. What Leonidas did is nothing to what they will do. In faithfulness to a trust there is no nation to compare with them, in our own time or in history, that I know anything about. They have certain bad traits, it is true. The worst Indians are those that we see along the railroad stations who have been ruined by the whites by whisky. But those who have seen them in their own homes have only admiration for them and great hope for them in the future.

(A large portrait of Geronimo was here exhibited to the conference.)

Captain WOTHERSPOON. This is the hereditary chief and leader of this most murderous band of Indians. He kept the United States on the run for twelve or fourteen years. Then this savage came down to Alabama—this savage who never drank a drop of liquor, who never told a lie, who never stole a thing, except what he considered fair booty in war. When he came there I made him my justice of the peace to give judgment in petty Indian offenses; and he got 35 cents a day for it, and was a very excellent judge.

Mr. HERBERT WELSH. It seems to me unfortunate that the conference should allow this Apache problem to stop at its present condition. When they were sent to Fort Marion as prisoners of war there were two classes of Apaches—some were actually prisoners of war, some were United States scouts who had been serving faithfully under our banner. As a representative of the Indian Rights Association, with Capt. J. G. Bourke, I visited them, and saw the testimonials which many of them held as to their faithful service to the Government. I went back to Philadelphia and published a statement of the facts, which led to much public discussion. The New York Tribune took it up, and a special Cabinet meeting was held to discuss the question of what should be done with the Apaches. They were removed to Mount Vernon as the result of that agitation, Captain Bourke being sent to examine the situation and report as to the suitability of the place as a temporary home. Then came the admirable work of Captain Wotherspoon. The idea of the friends of the Indian was not that that place should be their permanent home, but only a temporary resting place until some place should be found in a healthful locality where they could work out their own salvation.

A remarkable work has been done by Captain Wotherspoon, by which those men are prepared to merge themselves among the people of the United States, so that we should hear nothing more of them except that they are earning their own living. I fear if they remain in the climate of Fort Sill, and if they are not followed up by the care which has so far pursued them, all previous efforts will be thrown away. There is force sufficient in this conference to prevent what would seem to be a threatened danger. Is it not our duty to see whether these are real dangers or not, and if they are, to bring other influences to bear on the subject in Washington that some suitable place may be found for them?

Mr. Frank Wood said that it ought to be known that some Eastern friends of the Indian, in connection with Captain Bourke, found a desirable section of land for the Apache prisoners, and it was bargained for; but all efforts were stopped through the representatives in Congress, on account of the prejudice of the white people, who did not wish to have the Indians near them. That put a stop to the whole thing.

Gen. O. O. HOWARD. I began with those Apaches when Cochise was their leader. After much difficulty we (Captains Sladen, Jeffords, and myself) brought them out and put them on a reservation, where they kept the peace as long as the old chief lived and as long as his son lived. Geronimo joined them later than our visit, and they had great trouble and difficulty. A new agent came in after Jeffords, and he found it would be more economical to put them on the San Carlos Reservation. The promises I had made them by order of the President of the United States were all broken, and I said at once, "Of course there will be war, and a terrible one." I was in command of the military division of the Pacific when that war came.

When these Apaches were sent to Mount Vernon I had the honor of having Captain Wotherspoon sent down there. If he had had health and strength and there could have been perpetuity of his reign, that part of the Indian question would have been solved. But the condition of things is unsatisfactory. Our people have come to the conclusion that we will not have the Indians for soldiers. Perhaps that conclusion will please the Friends. I have joined with others in trying to find some place where these Apaches should be sent. The citizens of Arizona and New Mexico will not let them go there. They think that every one of the fighting men will go back if they are allowed to cross the Mississippi. I do not know why colonists have not risen to prevent them from going to Fort Sill. If they are on good land there, with the intelligence they now have and a little supervision, I believe these Indians will work out their own temporal salvation.

With reference to the agents, I am afraid we are saying too much. The Indian agents are as good as the rest of us. If an agent is a good man he is put in a trying

or false position; and he has to be so as long as the Indian Bureau lasts. I do hope that our Government may take such steps that, little by little, it will be possible to abolish it; but you do not want to abolish the educational part. Captain Pratt and I have no difficulty with each other. If it were practicable, I would like to see all the Indians distributed in the manner he says. But it is impracticable even to take the children away.

Our friend, Bishop Whipple, has got hold of the right end of the subject. His idea is that, if you put a man of the same earnestness as himself to work for the Indians, and he works hard, he will accomplish veritable results. Men will be converted; and, when their souls are changed, then they will be ready to ask for the white man's methods in other things.

If you take Captain Wotherspoon's presentation, you will see that Indians do not lie, and they do not steal; but they do some other things. They commit outrageous murders. Some people seem to think that if you get back to nature you get back to holiness. But no. You have got to convert the soul. Some children may be converted before they are born; but I do not think the Indian children are, and a good many white children are not. Let us bring into the reservations all those influences that will back up everything that is right and proper. Let us stick to the schools. By this constant revolution of getting out everything bad and putting in everything good shall we get the best sort of agents and teachers, and put good men in at the head, from the President down.

Miss Mary E. Dewey, of Boston, was introduced.

Miss DEWEY. I ask attention in hope that I may find counsel and aid from this assembly in a matter which our association has much at heart. About two years ago an appeal came to us from Mr. Ewing, then sheriff of Mojave County, Ariz., in behalf of the Hualapai Indians. There are about 700 of this tribe living in the north-western part of Arizona, in a district confessedly allotted to them because it was absolutely worthless. They are between the Grand Canyon of the Colorado on the one hand and the Atlantic and Pacific Railroad on the other; but they are not benefited by either this grand natural scenery or this proud triumph of civilization. The waters of the Colorado flow at the bottom of a mile-deep chasm, leaving the surface country dry and sterile; and the morals and manners taught the Indians by the frontiersmen are far worse than their native savagery. The tribe is very poor. The Government gives them rations for half the year; the other half they wander about over the district, and gather wild fruits and roots, eat the fruit of the cactus, and pick up a living as best they can. They have no occupation or object in life. A few of the men work for ranchmen and miners; but since the low price of silver has closed the mines, and the droughts of the summers have diminished the herds, they find less work of that kind, and are poorer than ever. The women are handy with their needles, and make their own clothes; but they get little work in the homes of the settlers, owing chiefly to the filthy conditions inevitable by people who live more like animals than human creatures, in brush huts or holes in the ground, without furniture or utensils of any kind.

In short, the Hualapai are in a state of uttermost poverty and degradation, but the interesting, the hopeful thing about them is that they are dissatisfied. They want something better. They do not want their children to grow up to be what they are. The vitalizing element of discontent has come to them in a noble form, and they ask for education. They want their children taught to do and know the things that white people know. They believe that the superiority of the white men is in their training. For their own destitution and helplessness they call to us to share our knowledge with them. Can we close our ears to so pathetic a request?

For us to refuse people who ask simply for education is as if, with bread in our hands, we should deny it to starving men. The Massachusetts Association has begun the work with such means as it could command. We sent to Arizona last spring a field matron, an admirable woman, devoted, earnest, sincere, and with a hearty interest in the Indians. She has a little school of seventeen, but she could have one of a hundred if there was more room. The children are docile, affectionate, and well behaved, and they are so pressed on by the eagerness of their parents for education that they have learned with uncommon speed. Although the school only began last June, their specimens of writing would do credit to any children. The manners are so good that the teacher of the public school said that she wished her scholars would behave as well as the Indian children. It is a day school, for we have not been able to afford a boarding school; but the teacher gives them a dinner of bread, and this is sometimes all the food they have to eat for the day.

What we have done is only to place an entering wedge, to find out what these people need, and to show how willing and glad they are to seize upon instruction. For one woman to relieve the misery and need of this whole tribe is like trying to bale out Lake Mohonk with a tin dipper. It is only the Government that can undertake the expense, and which, by so doing, will save money. If it gives the Hualapai,

instead of rations, some good land and a farm school, in ten years they will be self-supporting, and in twenty they will begin to pay taxes.

The first difficulty is to find arable land. Water is so scarce in that part of Arizona that the possession of it is wealth, and one man, who owns a spring which waters four acres, clears \$2,000 a year by selling vegetables and fruit. The soil is rich when moistened, and the three things necessary to lift the Hualapai into decent living are a piece of irrigated land, a farmer to teach them to use it, and a boarding school for the children, with industrial training.

A petition is to be sent to the Department of the Interior on this subject, which I hope will receive a great many signatures here.

Mr. SMILEY. The United States Government is rich enough to give every Indian an education, and I think it will.

Adjourned at 1 o'clock p. m.

FOURTH SESSION.

THURSDAY NIGHT.

The conference was called to order at 8 o'clock by the president. Prof. C. C. Painter was invited to speak.

THE LEASING OF INDIANS' LAND.

[An address by Professor Painter.]

We were speaking this morning in regard to industries. A great deal is said about industrial training. We go to Hampton and Carlisle and see the Indian work, and then we go to the reservation and make inquiries about him. I was at one a little while ago, and I found three Hampton students. I asked one what he was doing, and he said, "Nothing." I asked the second, and he said "Nothing;" the third, and he said "Nothing." Two of them had been educated as carpenters, and one as a blacksmith. I said to them, "This is a hard story to tell friends in the East." "What can we do?" they asked. "The Government has a carpenter here, and he has an assistant. All the places are full. The same is true of the places for blacksmiths." I was at one reservation where there was a very complete tin shop, with first-class machinery. A Carlisle student had been there, and this was fitted out for his use. But it was not being used. In the warehouse I saw immense quantities of tinware which was made at the Carlisle school. We have men who have gone out from the schools who have learned to make shoes, but we go to New York and Chicago and buy shoes ready made. We have men educated as tailors, and they go back, and we are surprised that they do not set up a tailor's shop, and manufacture clothing for the reservation. But we go to New York, and buy Jew clothing, and send it out; and you will not find an Indian not wearing store-made clothes. And so Captain Pratt is driven to the conclusion that these Indians who go back there after he has trained them to do these things, have no chance to do them. If they are going to do the work that they have learned to do, they will have to stay East to do it; they can not do it on the reservation.

So it comes to us whether we are doing a wise thing, taken as a whole. I doubt it. If we carry out the idea of industrial training, there must be an opportunity for carrying on the work afterwards; and I do not see any solution except Captain Pratt's. It is a very difficult thing. Miss Carter shows us what the Indian women can do at lace making. But the number of people who can buy lace at \$10 a yard is limited. That industry will have to be worked up especially, even to the limits within which it can be made profitable. So with the weaving of grass and pottery. The Indians show us that they can do any kind of work. It is the consensus of opinion that the Indian has in himself the ability to adapt himself to all kinds of industries and all positions in life. It comes back, then, to the question of opportunity.

It is the policy of the Government that these Indians shall be farmers. That is the theory on which the lands were allotted, and are held inalienable for them for twenty-five years—no matter whether the allottee is an old woman of 80, a blind man, or a young man who wants to go off somewhere else. There is his land, and he could not, under the law, do anything with it. "You must farm or do nothing," said the Government. Then came the time when Senator Dawes and General Whitteley and I talked this over, and we drew up an amendment, and Mr. Dawes secured its passage, providing for such leases as we thought should be provided for, in cases where there was disability to use the land. That is all that should have been covered by it.

The three provisions of the severalty bill, the three ideas that controlled in the framing of that bill and of this amendment, were, first, that allotments should take place where the people were ready to receive allotments; second, that this land should be held for twenty-five years, until the old men should have passed away, and the

sons and daughters shall be educated to appreciate the value of it, and then dispose of it if they wish, but not sooner; third, that there should be this modification, that in case of inability to use the land it should be converted to their use by leasing it to some one.

Whether these were wise or unwise provisions, this was the theory on which that bill was based; and this was the protection which was deemed wise to be thrown about those who took land under it.

I wish to call attention to the fact that in all three of these particulars the principle of the bill, the spirit and intent of the bill, are being set aside and destroyed. Allotments are ordered, not with reference generally to the condition of the Indian, but to the greed and demands of the white people about the reservation who wish to secure the surplus lands. I could, had I time, call attention to reservations where the effect of allotments has been to set back the Indians for twenty years.

I recently came across the Winnebago and Omaha reservations on which allotments have been made.

I was on the Omaha Reservation soon after the allotments were made, and it was very gratifying to find that the Indians were settling upon their allotments, and in almost every case living in pretty good houses built on their allotments, and with a large amount of land under cultivation. I came back satisfied and enthusiastic, believing that it was the proper thing to do in this case. I came across these reservations the other day, entering the Winnebago near Penda, and going through some 20 miles or more. Almost the entire distance I was passing through large pasture fields or extended cornfields, all used by the whites. Leases were secured from these Indians before the allotments were really made. One syndicate has 47,000 acres at least, leased at from 8 or 10 to 25 cents. The lessees sublet to farmers at from \$1 to \$2 an acre, making a very large sum out of this arrangement. The present agent undertook to break this up. The agents before him had favored it. The present agent is an army officer. He does not approve the leases, and has attempted to remove the lessees. He was estopped by the district judge of the United States court, but has taken an appeal. The ground of this estoppel is that the Indians are competent as citizens to make their own arrangements.

I went down across the Omaha Reservation and found it even worse still, though they are getting a better price for their land. The Winnebagoes only get enough to enable them to be drunk part of the time, but the Omahas get more. An educated Indian, to whom money was lent to help build a house, rents house and farm, and is living in a tepee on the bank of the river. About eight-tenths of the Omahamen, so Dr. La Flesche told me, are drinking whenever they have an opportunity, and more than one-half of the women. The condition of things is perfectly fearful. These are facts which we must face in considering the question of leases.

The amendment as made by Senator Dawes has been amended by the last session of Congress, by adding the word "inability," enlarging its scope. I have no question at all, if the court holds that they have a right to make these leases, independent of the Government or of the Department, that these white people will never leave these lands. It is their policy, I believe, to debauch these Indians by drunkenness, and unfit them for the occupation of the land which they now occupy and will continue to hold.

Whether or not we should have swept these restrictions all away in the beginning, or should not have thrown this protection about them, is the question now raised by some who have spoken, and is now before us. But, if we commit ourselves to a removal of these restrictions, let us at least insist that it shall be so done that the whites shall be under no temptation to debauch the Indians. I do not know what Dr. Abbott meant when, addressing himself to me, he said, "There are dudes in New York who smoke their cigarettes and live on the rents of their property." We are not trying to Christianize and civilize the New York dude. Perhaps that would be a more difficult thing than we have undertaken. But, if it became our duty to undertake this work, we would doubtless seek to know how this creature was produced, and, if we found that his power to alienate or lease his property was accountable for him, would inquire as to the advisability of limiting that power, assuming that our guardianship over him gave us the authority to do so.

We have reached a crisis. It is the intention of men in the West, and their efforts are being more and more felt in Congress as the power of the West is becoming greater in controlling national affairs, it is the intention of these men to sweep away all these limitations and restrictions which the severalty law put in the Indian's power to alienate his land. It is a question for us to settle whether Captain Pratt and Dr. Abbott are right when they take the same ground or whether we are right. If they are right, then let us seek to bring this about at once, and in such ways that do not involve the demoralization of the Indian as a means of its accomplishment. In some straightforward and legal way, as if by intention, and in such way as to secure his intelligent consent to what is done and with a full knowledge of the fact that he is making a final disposal of what he owns, let it be done, and not by indirection and debauchery.

But if we are not ready to accept this view; if we believe that, having stolen a child from its home and our conscience awakes us to the fact that we are doing wrong, we ought not to drop it at once into the river we are crossing, but must take him ashore and make provision for his care; then we need to awake to the danger which now threatens these children of our care; for children most of them are as yet, so far as ability to cope with the white man for land is concerned.

It is our purpose to defend the integrity of the Dawes severalty bill, and insist that it shall be carried out in its intent and spirit; we need to know that these are dangerously assailed and largely nullified.

Mr. John B. Garrett was invited to speak on the Indians of the Indian Territory.

MR. GARRETT. The dinner bell yesterday cut short the intensely interesting recital of facts which Senator Dawes was giving us with reference to the condition at present in the Indian Territory. The impression left on the minds of the business committee evidently was that the subject was one of too momentous importance to be dropped in that imperfect way. Hence I have been asked to say a word.

My own interest in the Indians of the Indian Territory began as long ago as 1865, when I was asked to accompany a venerable friend of the Indian who will be remembered here with honor—the late Thomas Wistar—to a conference with the representatives of the Indians of the Southwest, embracing a population of about 75,000, then estimated to be about a fourth of the whole Indian population of our country. There were several hundred chiefs present at the time, and the purpose of the conference was to make treaties of peace with those Indians who had been associated with the Southerners in the conflict which had just closed against the United States.

Shortly after that I held a commission from President Johnson, with others, for the location of the Osages in the Indian Territory, and at the time President Grant called upon the religious societies to assist him in the work of Christian civilization of the Indians I naturally enlisted in it. My interest then was again centered in the Indian Territory for the reason that President Grant and those under him allotted to the Society of Friends the Indians of the Central Superintendency as those who should come under our care, so that from my first acquaintance with Indians it has been with those of the Indian Territory.

We listened with great interest to the intensely sad recital of present conditions which Senator Dawes has witnessed, and which, he gives his testimony to us, are now threatening the very peace and social welfare of our country. He gives us to understand that there is a lack of justice in the relations of the Government and the people, that immorality prevails and outlawry exists. There are about 50,000 Indians to 300,000 whites, or those not rated as Indians. This embraces a very mixed population of native Americans, negroes, and Europeans, engaged in the work of railroads and mining. I should probably take issue with him if I dared to do so with so eminent a student of our political institutions, upon one or two points. One would be as to the right of the United States to have sent recently into the Territory its forces to drive out and to assist the owners of the mines in subduing the strikers. I will not discuss the subject of strikes, but the question of the Government's right to enter the Territory for arresting a strike.

During my tenure of the position of secretary of the Associated Executive Committee of Friends on Indian Affairs it became my frequent duty to go to Washington. On one occasion the superintendent of the Central Superintendency summoned myself and others there because he was very seriously embarrassed by the encroachments upon the Territory of white men from Kansas and other States. As a Friend he did not feel that he could consistently call upon the Army of the United States to assist him, but he did not know how to get rid of these trespassers. We accompanied him to the Commissioner of Indian Affairs, then to the Secretary of the Interior. Still we were unable to solve the question which seemed to threaten the very existence of the work we had at heart. From the Secretary of the Interior we were taken to the President and his Cabinet. The question was then and there submitted, and instantly President Grant, with that incisiveness for which he was conspicuous, cut the knot by saying to his Secretary of War, "Send out an order that the Army shall at once expel from the Indian Territory every one who does not hold a permit to be there signed by Superintendent Hoag." So the superintendent, feeling that he himself was restrained from calling on the Army of the United States, had practically the whole power of the United States Government placed in his hands by the simple word of the President that no one was allowed to remain there who did not have the permit of that Friend.

I take it that the Government at Washington, in sending its Army, or a branch of it, into the Indian Territory recently did exactly what President Grant did at that time. The Army was sent there to expel from the limits of the Indian Territory every one not an Indian not holding a proper permit to remain there. If I understand it, only those are entitled to remain who are either married into the tribes or are lessees of Indian land, or who are employed by such lessees.

The 300,000 white people who have come in have come in under circumstances which have made it impossible to exclude them. There are to-day crossing the Territory no less than four main lines of railroad. Mines have been opened under leases from the Indians, confirmed by act of Congress.

Under the conditions that exist, so different from those under which the treaties were made with these Indians sixty years ago, I would like to submit to the conference this question, whether the mutual breach of covenants, as well as the change of circumstances, has not so far relieved the United States that it can deal with this question *de novo*, and not on the basis of the treaties made sixty years ago. I trust that the business committee, in formulating its judgment, will be able to give some utterance which shall be a guide to the popular thought of the coming year.

Rev. A. E. Dunning, the editor of the *Congregationalist*, was introduced.

Dr. DUNNING. I have visited many of the reservations and some of the schools. I have seen that there are three classes of white people in their relations to the Indians: First, those who regard the Indian as man and brother; second, the Government officials, who regard them as wards; third, their neighbors, who regard them as things to speculate with. Some of these neighbors would exterminate them as they would exterminate wild beasts and rattlesnakes. I remember, on one occasion, a number of Indian scalps being displayed to me, as one would display buffalo heads or the tails of rattlesnakes. I do not know that even religion has done anything for Indians that white men have not speculated with. When Mr. Moody's school for Indian girls was opened I was in the Indian Territory. Some of the white people said it was a satisfaction that Mr. Moody was doing that work, because many of the ambitious young white men were marrying to get "head rights" in the Territory, and they were glad to have the Indian girls whom they married have a little more education. The conditions described by Senator Dawes are matters of public notoriety, yet most people appear to be ignorant of them. Nine years ago I spent some time in the Indian Territory, and I think that the conditions were then very much as now. There were no laws executed by the United States. Law was bought and sold then, as now. I do not quite like the figure that Professor Painter has used of carrying the baby. The river is an ocean without a shore. We shall have to drop him sometime, or carry him always in the water. It would be presumption in me to differ with the general sentiment, but I do feel that the time must come when the Indian must be treated as a man, and when we must expect to make him a citizen here and now, and that this process can not be gone through without suffering, perhaps very much suffering.

I felt a sentiment of gratitude when our most tender-hearted Christian General Howard said that some would get sick and some would die, but that they would come out all right after all. That is the philosophy we must face. There will be pathetic instances. There are always pathetic cases arising from the enforcement of just laws. I saw the daughter of the old Chief Seattle begging from door to door, yet her father once thought he owned all that vast region. I saw other Indian women in the Northwest who had married white men, and, when the severalty laws came, they made their children legitimate and their wives comfortable. How is it possible that you can give an Indian property, and not give him power to lease what is his own? How is it possible that we can make him a child for generations, and expect him to continue in that childhood, and yet grow into manhood? I do not like to differ with Senator Dawes; but, while we must admit that the legislation which gives the power to lease the Indian's land is often prompted by greed, I should like to see our national legislature give to these Indians in the Indian Territory the power to sell their land or lease it, exactly as the white men do with their property. They have long been civilized, and I doubt if we shall get to a solution of the problem until we put them on this footing and say, "You are citizens of the United States Government, and you have got to face the perils that other men face." I am afraid that there is too much paternalism in treating the Indian problem.

The Indian is going to be helped by those who live nearest to him or by those to whom he is to be sent to live near. Is it not possible for Indian associations to awaken a public sentiment in the immediate neighborhood of the reservations which still exist, but which should be broken up as soon as possible? Since the West was first settled, a very different class of men and women have come in from the early settlers. Very many Western people have gone there who are not tempted to defraud these Indians. Is it not possible to create a public sentiment there that will befriend these Indian neighbors? Is not that the right Christianity? Then, while we fight for them, we must teach them to fight for themselves. Some will go under, but there is a great difference between Indians. I have seen the Digger Indian, who is only an animal, and I have seen among the Creeks and Cherokees elements of manhood as fine as any I have ever seen.

I do not believe the Indian ever owned this country. He was a tramp in it, without a title. I do not believe we ought ever to have made treaties with them any more than with any local communities.

Mr. AUSTIN ABBOTT. It appears from Captain Pratt's remarks that there is—in his view, a little account between him and me remaining unsettled from last year. I thought that account was balanced. Last year, after his address on the importance of not allowing the Indian youth, after education, to go back to the reservation, I said that I understood him to say this was the only way to save them. When he disavowed having said it was the only way, I made what I thought was, under the circumstances, a very handsome apology by acknowledging that I should have said that his words had made the impression on my mind that he thought it was the only way. That's about as near as you can expect a lawyer to get it. A lawyer is not so accustomed to hit the bull's-eye as a captain.

Now, to balance this account, I will not venture to impute any opinion whatever to him. All I have to say, after listening to his very impressive address this morning, is that I believe he has more than half convinced you that it is the only way. I will leave it to you if he has not done so. This is a kind of compulsory arbitration to settle the account between Captain Pratt and myself.

LAW FOR THE INDIAN.

[By Austin Abbott, LL. D.]

Are we not dealing too much in generalities? Two travelers might come to the United States, and afterwards one who spent a winter in Maine might say, "What the poor in America want is snowshoes and blankets." And the other, who spent a summer in New Orleans, might, with equal truth, say, "What they want in America is sunshades and mosquito nets." We have similar ideas of this great problem. There are radical differences between tribes and between reservations. I am satisfied that, in respect to some tribes and reservations, this method is the only way. With some Indians, at least, after they have been brought from the reservation and educated in civilized life, the method is not to send them back, but to tell them to go wherever they can find work. Let them be put into the currents of life to swim with the rest of us.

Generalities are useful, as they lead us to something specific. The differences of opinion that we have developed here appear to me partly owing to the fact that we have not considered any specific question. If we did we should find that these differences of opinion developed by discussing generalities would largely disappear.

Let us consider some specific questions; and perhaps we may agree on one or more, and may take some steps for their advancement.

Last year at the American Bar Association the subject of legislation for the Indian was fully discussed and a proposal made for an extension of jurisdiction of the courts was approved. A resolution to that effect was passed.

There are several difficulties in the way of advance out of the present situation. A man once fell into a well in the night. As he went down he clutched at the air, and he caught on the bucket. There he hung by his hands till daylight, half dead with exhaustion and fear lest he should fall into the water. When daylight came he was able to see that there was no water in the well, and his toes were within 3 inches of the bottom.

Now, the Indian problem is clutching on the edge of the bucket of the reservation; and the bottom of the well is dry. You are not going to "drop the baby into the river." There must sooner or later be a uniform law for colored, and white, and Indian, and all, in a free country. This is the solid bottom. We could not say that ten or fifteen years ago, for the only protection of the Indians then was the fact that they were wards of the nation. We get beyond that now as fast as they become civilized.

One of the specific difficulties is that the courts administering the law are all at sea. They do not agree on what the law is. One judge has held that in the Indian Territory the common law is to be the rule of decision. Another judge has held the opposite, saying that, because these are not Englishmen nor the descendants of Englishmen, we can not presume that the common law is to apply among them. The profession are in doubt as to what is the law. But they are all agreed that a different system is to be applied to the Indian from what is applied to the white man. This is the fundamental grievance and the logical cause of endless difficulty.

Let me give you one instance to show how the efforts of education, religious instruction, and moral training can be nullified by the results of this confusion of laws. During the last year or two an Indian man and woman were indicted for adultery. On the trial the guilty act was proved. But it appeared that the woman was a half-breed and by the law was not an Indian. She was convicted. It appeared that the man was a full-blooded Indian. There was not the same law for the two. There was no law to punish the Indian, and he was acquitted. Now, a single declaration by a court of American justice in the Indian country that the Indian man may commit such offenses with impunity may annul the moral instruction that

missionaries can give in years. There is no value in law if it has not a fair degree of uniformity. The difficulty is that we are dealing with class legislation, and are clinging to it to the last instead of getting rid of it as fast as we can.

Now, there are local antipathies to meet, and the greed of white settlers and speculators. These aggravate the difficulties of the situation. Under these circumstances the first inquiry as to any element in the welfare of the Indian is, What is the law for white people on this subject in that place? The second is, Why will not that law do for Indians? If there is any good reason why it will not, then what is the least that we can add to make it do for Indians? But to ask legislation to give them more privileges and put more safeguards around them is to make them a privileged class—to set them up for a mark for their pillaging neighbors. You can give any one peculiar privileges by law, but they will be surrounded by vultures at once. This is a country of uniformity of law and equality before the law. If you give the Indian his land and say, "You are not obliged to work out your highway taxes," he can sit on the fence and see the white man work. He becomes in their thoughts a fair prey. I do not say that men ought to think so, nor that fair-minded men can think so; but, as men go, it is the logical result. They take it out of the Indian in that way.

How far will the present law for the white man serve to settle some of these questions under discussion? In the State of New York there are probably 1,000,000 white people who can not convey their real property if they have any. I think I may say there are nearly 100,000 minors who have real property interests, and who are incapable of conveying. There are lunatics incapable of conveying. There are men who are habitual drunkards or who are spendthrifts, or who have on some ground been interdicted by the courts, and are under guardianship, which prevents them from getting rid of their property. What is the white man's law in these cases? If it is found that it is for the interest of any one of these children or incapables to have his land conveyed, he must present a petition to a court of justice; and the court causes an inquiry to be made into the particular case to see what the situation of the infant is, what the land is, and whether it should be sold or leased, how much of the proceeds shall be devoted to education, and how much invested. Why is not that good enough law for Indians?

Question. Would you include all Indians?

Mr. ABBOTT. As fast as they become citizens and hold land under a protected title, so that they are interdicted from conveying.

I would suggest this resolution:

"*Resolved*, That the alienation by sale or otherwise of lands held in severalty by Indians should be regulated and governed as far as practicable by the same rules and principles that are applicable to the alienation of lands held by whites under age, and not otherwise."

As to what court it shall be, that is a question that can be decided afterwards. White man's law is good enough for Indians on this subject. As to the question of how it shall be worked out, I would offer the following resolutions:

"*Resolved*, That a committee of five be appointed by the chair to consider and report what legislation is necessary to effectuate the foregoing resolution.

"*Resolved*, That said committee shall ascertain what rules and regulations, if any, have been adopted by the Secretary of the Interior, under and pursuant to the authority conferred on him under the recent act of Congress in reference to selling and leasing Indian lands, with power to recommend to him such revision, alterations, or additions as said committee may deem advisable."

Why should an Indian not work out the road tax that is to give access to his lands? If he refuses to do it his lands would have to be sold for him.

Question. Would not that sweep away a great deal of the land into the hands of white people?

Mr. ABBOTT. We are told here that three-quarters of the Indians are already supporting themselves; and, if the land of the other quarter could not be swept away except by a judicial investigation brought about by means of a lawful process for the benefit of the Indian himself upon precisely the same principles that a white child's property may be swept away, as you call it, we should have a tolerable result instead of the result which is now highly objectionable. The Indians have land; and they ought to do their share, so far as it is possible, to pay their taxes in work. If it is a child or an aged woman, all she has to do is to petition the judge to lease enough of her land to pay the taxes. And if there is now and then a case which we can not solve, it is one of the cases which are liable to occur to all men when they have no money to pay their taxes or to carry the property they own.

There is another class of taxes laid by the vote of the town or district, the school tax. I am of course not familiar with the details of different tax systems in the States where these questions may arise. If it is like those in this State in the rural district where I have my summer home, it is as follows: My neighbors assemble in a little village and vote how much they will raise for the school; and my land is

taxed for my share. They know the value of it. If I should be exempt, they would feel a hostility to me. If I were exempt because of being an Indian, they would feel a double hostility to me. To the instinctive repugnance for an Indian would be added the antipathy for one who does not bear his share of the common burdens.

These neighborhood taxes are matters of common knowledge and common talk. The chief friction and hostility against the Indians are because they are exempt from the common burdens of the neighborhood that everyone has to bear. Town and district taxes ought to be paid by the Government, having funds derived from the sales of the Indian lands.

The State tax is further away. The town people have nothing to do with that. They do not assess that. County supervisors of the State officers make it up. If any exemption is allowed it ought not to extend to taxes laid by the men of the vicinage on themselves. Correcting this inequality would remove a considerable part of the trouble. I would suggest the question whether it is not practicable that the United States should pay all taxes that are not worked out, or that are not neighborhood taxes, out of the funds of the Indians held in trust by the Government. The whites then would feel that justice is done. The Indian tax would be paid. That which is paid by labor he would pay himself. That which is paid by money would be paid by his money, although by the hand of the United States; and this class privilege of the Indians would be ended. And I can not resist the conviction that they would prize education better if they had to pay their share of the school taxes.

Now, what I have said is as though the field were one. But there are reservations as big as a State and some only as big as a town. I do not know of anything which would be such a help as it would be to bring together all the conflicting legislation, to collect the various acts of Congress and laws which are now actually in force and obligatory, and arrange them systematically. The courts are going as fast as we can reasonably expect in the present condition of the statutes. This collation of statutes would facilitate their work. To that end I would suggest the following resolutions:

Resolved, That it be referred to a committee to be appointed by the chair to inquire whether any adequate official compilation of the laws and decisions affecting Indians exists, suitable to aid the duties of judges, attorneys, commissioners, and Indian agents, and to report whether anything further would be useful to that purpose.

Resolved, That the same committee be requested to arrange for the preparation of a short code of laws for Alaska or to report on the expediency and the method of procuring such a code."

Professor PAINTER. After a denial by Dr. Dunning that there is a child in the case, and by both Dr. Dunning and Mr. Abbott that there is any water either in the stream or in the well, I am glad Mr. Abbott rescues him from his peril, carries him into court, and asks the judge to appoint a guardian over him. This is exactly what I desire; and Mr. Abbott's suggestion is, I believe, the wisest solution of this difficulty that can be made. I think it infinitely better that a United States court should appoint this guardian, should decide when, and upon what terms, and in view of what facts, the allottee should be allowed to alienate, temporarily or permanently, his land, than that it should be done by a general law of Congress, to be interpreted by the Indian Office under solicitations from the parties desirous of obtaining his land, supported, as they generally are, by political influence.

Undoubtedly there are cases in which it would be wise to allow the allottee to lease and even to sell his land. These should be examined and decided by an impartial court, and not by parties interested either pecuniarily or politically.

In regard to taxing these lands, I have always deemed it unjust, on the one hand, that they should be exempted, and unsafe, on the other, that they should be at the mercy of the tax collector. The taxes should be paid either from the funds of the Indians or from the Treasury of the United States.

On motion, Mr. Austin Abbott was added to the business committee.

Mr. Israel Hill, an Indian formerly at Hampton, was introduced.

Mr. HILL. You white folks have been talking about carrying us, like a baby, across a river. There is no water in the river. It has all sunk down into the ground. There is no danger of our being drowned. We do not expect nor want to be carried always. We are expecting to help ourselves, and we will help ourselves, as soon as we know how to do it. I am willing to stand on my feet under United States laws. A great many of us are thinking and planning what is the best thing for us to do. I have heard a great many times about wages and work. I have been among the whites every vacation since I was in Hampton, and everywhere I have worked I have always done more work than any white man I was working with. I have said, if they could stand it to get up and work at 3 o'clock in the morning, and quit at 10 o'clock at night, I could stand it with them. Therefore, they have given me as much wages, and sometimes more. When we all have an opportunity to go to school and learn more, then we shall be able to stand up and help ourselves.

It was announced that the remainder of the session would be a free parliament. The following are abstracts of the remarks made:

Hon. WILLIAM H. ARNOUX. Some time ago I had occasion to study, in a professional way, the documents connected with the Dutch occupation of New York. I came across one paper, written about 1640, which, to my mind, was the most pathetic paper that I ever read. It was a protest of the Indians, addressed to the Dutch Government, against the murders and massacres and robberies which they had sustained. The address began by saying: "When you came first into our midst, we gave you our corn for your food, our daughters for your wives; and how have you requited us?"

You have heard testimony here of the honesty of the unspoiled Indian. When Fremont went west across the mountains, whenever he reached natives who had not been contaminated by our civilization, he found them always honest. On one occasion he broke camp, and traveled a day. At the end of the day an Indian overtook him and brought to him, at the foot of Pikes Peak, some things that had been left behind in his camp. They were not only honest, but they were endeavoring to do that which was right. They wished to restore to the white man that which they supposed to be his lost property,

God has been long suffering with our people in deferring the punishment that should await us for our iniquity. But we have seen that the work of this conference is rousing the people, and awakening their indifference, and enlisting activities that will bring happiness and justice to the American Indian.

Gen. JOHN EATON. Alaska is so enormous, extending as it does thousands of miles, that there are various conditions in different districts which must be met in shaping the Indian policy. Fortunately, the Indian policy of the United States was not extended to Alaska; and, though there is danger of starvation, there are no rations to be issued. With the use of improved arms and improved tackle for fishing, the people of Alaska have not had the wisdom to delay killing their game. They have destroyed their game, and starvation has overtaken whole villages. Sheldon Jackson, who was directed by Dr. Harris to study the question in Alaska, saw that there were similar conditions in Siberia and northern Europe, where the people easily maintained themselves. The solution of the difficulty in Alaska was to bring reindeer there. It was said that the reindeer could not be purchased. Then it was said they could not be brought by ship, they would not survive. Both were done. The first arrivals were placed on an island. The next year they were found in good condition. More money was expended, and finally the Government came to make some small appropriations for this work. It was found that the people could be taught to be self-supporting citizens, but the means provided were not adequate. There is a system of experimentation in the interest of agriculture and mechanics, under the Bureau of Education, going on in different States and Territories. Dr. Jackson and Commissioner Harris asked that that provision be made for the benefit of Alaska. Dr. Jackson has secured people from Lapland experienced in herding reindeer—Christian people. These herders and their families together, children and all amounting to seventeen, have been brought to Alaska, with their dogs and implements, where they are to train the natives in rearing reindeer. These reindeer will not only be a benefit to the population in the way of food and utensils, but for transporting the mails, so in this way they will be of direct benefit to the United States Government.

Mrs. FISK. Has there been any addition to the herd this year?

General EATON. Yes; there were additions last year and this year, and Dr. Jackson went out this year with an expedition to buy still more reindeers to increase the herd. He has also made the proposal to the missionary societies that he will furnish them reindeer if they will take a trained herder and cultivate their herds. The object is to disseminate this new means of support. Every individual will then become an owner. Every family will have in its possession reindeer for all its uses.

Rev. C. J. RYDER, D. D. I feel that I have a message to tell you in this conference of the immediate and of the prospective results of splendid victory. I went over the Indian nation first some eight or nine years ago, and I saw an Indian so peculiarly dressed that I would like to put him before you to-night. He had on buckskin moccasins, all beaded and ornamented; on his legs, buckskin breeches; round his tall, straight figure, a black Prince Albert coat. It looked like a minister's coat—it was sort of shiny up the seams, as ministers' coats will get, to my great regret. On his head was a Derby hat, with four holes in it. Out of one of these holes came eagle feathers that danced over his head as he walked down the street. I said to myself as I saw him, "That is what we have done for the Indian. We have put around him the faded garments of our cast-off civilization and left his heart as mad and savage as when our forefathers landed." General Howard touched upon this problem; it is not a question of clothes. I remember when I first went on to a reservation I supposed that a man who dressed in an English garb was a civilized man and that, if he had a blanket wrapped round him, he was a pagan. I have come to

an entirely different opinion. Why, Miss Carter said that they come home with nice clothes, but have to go back to the blanket because those become worn out.

There are certain questions that we have got to face. It is not a question of clothes and the possession of property, or the objectivity of the Indian. It is his subjectivity. There must be the spirit of Jesus Christ in their souls. They must become Christians. When that is accomplished, we shall solve the Indian problem. The holding of land in severalty will not solve this problem alone. What is the character of this land?

I rode over a tract of land in the reservation opened about two years ago to white settlers. I counted eighteen houses of white men. Sixteen were deserted by the white families that had tried to get a living there. How can the Indian do what the white man can not? We have not always thought of this. I remember seeing at Fort Berthold a boy from Hampton. I said to him, "Are you farming?" "No," he replied. "How is that?" I asked; "did you not learn to farm?" "Yes," he said, "I learned to farm." "What are you doing then, herding?" "No," he said, "I can not herd on this land. There is no possibility of making a living." The basis of civilization in New England is in the church, the school, and love for land. The farmer loves his land. Land hunger is the basis of civilization. The Indian has none of that. You have got to instil it. All the Indian has cared for land is to hunt over it. The sense of ownership is no stimulus to him, as it is to the white man.

A change is coming in the environment of Indians, and in their condition. In North Dakota, in the time of the Indian festivals, they used to cut themselves and thrust thongs through the quivering flesh of their breasts. If they could break through the bands of flesh, they would become great and courageous warriors, and could go on the warpath. If they could not, they were squaw-men. They had to stay in the tepee, and do the work the squaw did. When I was there the last time, this torture pole to which they had fastened themselves in the old times had fallen down; and, when it fell, the Christian boys gathered round it, and cried with a shout, "This is the end of the old, and the beginning of the new!" I went out, and saw that pole as it lay on the ground. It is the last torture pole that will ever be put up on the prairie. We met in the little church near by, and twenty of those Indians that have come out of darkness into the light of the Gospel of Jesus Christ gathered about the communion table. Shall we not believe that new aspirations and new success are before them? We build manhood and womanhood from within, not without. We must create, as I have tried to say (1) higher schools, (2) purer morals, (3) love of land and home, (4) the spirit of Christian self-help and neighborhood, if we would elevate the Indian.

MR. DARWIN R. JAMES. I was in Alaska two years ago, and was greatly pained at the condition of things because of lack of law, or lack of enforcement of such laws as they have. Not that I complain of the officials; for I found them capable and efficient, but unable to cope with the difficulties which exist. Under the organic law the sale of intoxicants is prohibited, and yet they are smuggled into the Territory in large quantities. Only a few days before our visit at Douglas Island the superintendent of the Friends' Indian school, Dr. J. E. Connett, had been tarred and feathered at midnight by a party of ruffians because he had sent a carefully written account to an Illinois newspaper of the murder of his predecessor, Mr. Edwards, who was endeavoring to prevent smugglers from bringing whisky to the Kalee Indians, among whom he was then laboring. The murder the following summer of that grandly-equipped young missionary, H. R. Thornton, at Cape Prince of Wales, sent a pang of sorrow through the heart of every one who knew him. He wrote a letter to me, received just prior to our annual conference a year ago, begging me to use influence at Washington for better police surveillance upon the Alaskan coast. The thought is impressed upon me that we should inform the public of the state of affairs there, that the people demand of the Government that those waters be properly policed, that Americans who are there for one purpose or another be properly protected. The strong arm of the national authorities should be felt there as well as in places nearer the seat of Government. I do not think it would be a difficult thing to accomplish, but, difficult or otherwise, it should be accomplished. I hope that the platform put forth by this conference will contain some emphatic resolution upon this subject.

MR. FRANK WOOD. At present there is a great danger threatening the mission of William Duncan on Annette Island, Alaska. Some of us remember meeting him here, and how we were thrilled by his wonderful story of a tribe of cannibal Indians redeemed from paganism and barbarism, who were at that time christianized and highly civilized, with organized government in the town of Metlakahla, British Columbia. They had been subjected to interference and religious persecution from an English bishop. This led Mr. Duncan to go to Washington to see if a place could not be set apart for this people in the United States where they could enjoy liberty of conscience. This mission was successful. Congress set aside Annette Island for the "exclusive use" of William Duncan and his colonists. On Mr. Duncan's return

his Indians, rather than submit to the persecution of intolerance and bigotry, preferred to give up their town with their splendid church and their comfortable, well-built little homes, which they loved as we love our homes; and 1,000 of them, men, women, and children, left all, and in their boats sailed along the coast to the island wilderness that had been given to them for a home. They were as heroic a company as that other band who for liberty of conscience came to these shores in the *Mayflower*. Against almost insuperable obstacles they have built the town of New Metlakahla. They cleared the forests, surveyed and laid out their streets, built comfortable houses, a church seating some 1,800, larger than the one they gave up; a town house, a sawmill, a large salmon cannery, where they put up the best brand of salmon that is put upon the market. The Indians earn good wages, and may become stockholders in all the different business enterprises. They have learned and work at most of the industries and trades of civilization. They are a law-abiding community. No liquor is sold. The Sabbath is kept strictly as a day of rest and worship; and I question whether in any community of the same size so large a percentage of intelligence, morality, and genuine religion can be found as in New Metlakahla. This work has been accomplished, under God, by one man, who thirty years ago found these people cannibal barbarians. Yet there is great danger that they may be deprived of their home and their property whenever the white man's greed thinks their island worth taking, as neither Mr. Duncan nor his people have legal titles to their land.

A short time ago I read in a Pacific Coast paper that gold had been found on Annette Island, the present home of this colony. If this is true, it is almost certain that the Indian civilization, which has been built up with so much labor and expense, will be swept away by the greed of white men, who will drive off the Indians, destroy their property, and seize their lands. True, Congress gave them "exclusive use" of Annette Island; but "exclusive use" is not a legal title. If anything should happen to Mr. Duncan, and the Indians were driven off or killed, they would have lost "exclusive use;" and there would be nothing to prevent unscrupulous whites from taking possession. Something should be done to give these people legal titles to their property. We may not be able to get a law that will give titles to land for the whole of Alaska, because it is not yet surveyed; but can there not be some special legislation to keep these heroic people in possession of the town they have wrested from the wilderness? It would be a shame and a disgrace to us as a nation if through our indifference or neglect we failed to secure for them valid titles to their lands, and in consequence they should be robbed of what they have so laboriously built up, and thus the finest object lesson in Indian civilization that the world has ever seen should be destroyed. Let us see to it that the protection of law is extended over them.

Capt. J. G. Bourke, of the Third Cavalry, was introduced.

Captain BOURKE. I came over here to shake hands with you all, and to give you the assurance that personally I value the good work you are doing. All that I know of Indians I can tell you in two minutes. All that I think and feel I could not tell you in two years. Permit me to say that I have heard some good things said here.

I think Americans like to get things in the concrete, and I will fortify Bishop Whipple's remarks by my own observations. The Apache scouts went into the military post of Fort Bowie, Ariz., in 1885, and Mr. De Long sold them a lot of things right over his counter, and it went down in his books this man got so much and that man so much. "Well," I said, "that's a curious way of doing business. How much have you let them have across your counter?" He looked at his books, and said, "Seventeen hundred and eighty dollars' worth." Two or three months after those scouts came back and were paid off. My curiosity getting the better of me, I went over and said to De Long, "I have nothing to put in my journal to-day, and I am in search of something. I want to know how you came out in that scout business. How many dollars did you lose out of the \$1,780 that you trusted those fellows?" "Not one single cent," was the reply. "You must have made such arrangements with miners," I continued, "what proportion do you lose on them?" He is an old friend, and so he answered, as old friends sometimes will, "Quit asking fool questions;" but he confessed that he lost from 30 to 40 per cent on them.

Something has been said about the stolidity of the Indians. That is only their armor when you first meet. When you see them in their homes they are jovial and full of fun.

The Indians are a very clean race. When it is possible to bathe they jump in and do so—men, women, and children. When it is warm they go in two or three times a day.

Their vices are first that they are very superstitious. They are superstitious about everything. If they hear the hooting of an owl some one is going to die. Another vice is their care for their relations. They are entirely too fond of their relations. They will do anything for them if they are poor. At the sun dance, which I have seen several times—and it is a horrible thing to see these men pull themselves

free from those thongs—gifts must be made, and every man outbids the other in giving away everything that he has. You will see these things piled up—food, clothing, moccasins, etc., and all go to the poor to such an extent that the givers become paupers themselves, so they simply swap the condition of poverty. I am talking about the wild fellows.

Another vice is gambling. They are inveterate gamblers. Gambling is a form of divination. It used always to be accompanied by medicine songs. You would see them playing games of different kinds, and having the medicine man crooning one of their medicine songs. They are kept in thralldom by medicine men. They form a kind of gens, or sept, or clan. They brag a great deal, and do an immense amount of harm. But sewing machines and nursing bottles are getting down among the Indians; and if they can get the phonograph and some other notions they will overthrow these old duffers, because they have nothing that will compare with our wonders.

If an educated young Indian hear the medicine men boast that they can go 50 miles in one night they will answer, "Pshaw! That's nothing. I've gone 50 miles an hour when Captain Pratt took me on the limited to the Exposition at Chicago." And when the old men insist that they can kill people and blight crops by a glance of the eye the disenthralled youngster will answer, "Kluschô," which is the Apache word for "ra-a-ats."

In the matter of education I have little to say. I do not know much about education, to tell the truth. I have had little experience with it, and I do not like to run into a place where angels are afraid to tread. But I think that the great fault with Indian education has been that it has not been along the whole line at once. You take out a few Indians and educate them to a high degree and send them back to their tribes. A better thing is to educate the whole tribe. You may not raise your building but a quarter of an inch at a time, but the whole thing will go up together. It is better to give a little to a whole tribe than to give a great deal to a few. I have seen some sad things among the Sioux and among the Apaches. I once found a boy wandering round who asked me in excellent English: "Where do I come in on these positions? I have been at Carlisle. I have learned the carpenter's trade, and I want work. I come back to my own people. I can hardly speak my own language, and I try to be a carpenter; but I am told to get out of here. The carpenter is white, and the assistant carpenter is white, and the blacksmith is white, and so is the assistant blacksmith, and so is the saddler; and there is no room for an Indian boy." He was willing to work for \$10 a month, and could not get that.

I think we preach work too much to the Indians. They know how to work and are willing to work. I have seen Apache Indians carrying from sixty to a hundred pounds of hay at a time, which they had made, and which they would have to sell for a cent a pound. To say that the Indians will not work shows that there is a mistake somewhere. The first thing that the Spaniards did when they took possession was to arrange that the Aztec markets should be maintained, that into every village the Indians should have their tiange, or markets, to which all their products should be brought. The Indians brought their things in there and they got a fair price for them. Curiously enough, they could not sell to an army officer or to a clergyman for some reason. It was apparently thought that they would both take advantage of an Indian. I am not at liberty to speak for the clergy, but it was a mistake with regard to the army. I would let the Indians see that every hundred drops of honest sweat earns 60 cents in silver. I wish I could say 100 cents, but I can't; for the dollar is not worth that. To tell them that rations will stop and they must begin to work on such a day will not do. It is well to be a little careful. We told the Cheyennes that in 1876 and fixed the date the 1st of June, 1877. When the time came they got their own cartridges, and they jumped out and gave us a dance that some of us have not forgotten yet. It cost us about \$10,000,000 for that piece of monkey business. So do not be too sudden in telling them when they are going to begin work. Give them their tools first.

Remember the influence of atavism in educating the Indian boy. The Navajoes are sheep raisers. Let them raise sheep, but give them the idea that there are new, fine varieties of sheep to raise. Then give them Lamb stocking knitters, and teach them to make cloth. They make blankets, but they never make cloth in the bolt. The blanket is one piece. The Indian makes it, and then stops. Don't make a wheelwright of a Navajo and then send him where he can not make a blanket or up into the mountains where they don't want his old wagons.

Another thing should be done. There should be new foods introduced among the Indians. The old Franciscan missionaries gave them sheep and the jackass, not as food, although the Apaches and Hualpais used them as food, and ate them up. They gave them the peach; and it is there yet, and it is a fine fruit. These new fruits will wean them away from base food; and they have got to be weaned away. They have got to be weaned away from a great many things. I know that is sentimental, and you would not expect sentiment from a cavalryman; but we do sometimes

indulge in it. I would give premiums to those who raised the best fruits and sheep and had the best fruit trees and cleanest houses and the best children in school—some little gimcrack medal or illuminated paper, which would show that they had tried to do well, and that their efforts were appreciated. They love appreciation as much as some of the rest of us do.

I would let them have their own minor courts, although I would have one law for the Indian and the white man. I would not be all the time sending an ignorant policeman among them to arrest them. Let them take care of their own petty jurisprudence. That they are able to attend to those things let me show you by citing one or two instances that occurred in 1882. Two Indians were arrested by their own tribe, and by circumstantial evidence were found guilty of wife murder. Each had two or three wives. One killed one of his in a drunken row. He got ten years' hard labor in the guardhouse. The other got three years of hard labor. About the same time an American at Tucson, who had been seen to chop his wife in the head with an axe, got a year. I think the Apache can be trusted to administer the laws.

Next, give the agents living salaries. Don't tell a man he must be a two-legged exposition of the ten commandments on \$1,500 a year, for you are not going to get him for that.

At the close of Captain Bourke's remarks Captain Pratt said he knew all about the Indian boy to whom Captain Bourke had referred. When a child he was captured by some United States Army officer and was with the Army ten or more years before he came to Carlisle. He spoke English as his mother tongue. He was sent to Carlisle as a matter of discipline, to get him in shape. He could speak no Apache when he came. While there he was once or twice caught in drinking saloons in town and was otherwise disobedient and unruly. He was always a trouble and he never learned the carpenter's trade well. He afterwards left and worked his way out West, and "as a sample of Carlisle students he is not worth a cent," said Captain Pratt.

Dr. Henry M. Field, the editor of the Evangelist, was introduced as one who had just returned from Alaska, and could tell about the Indians there. He said, in substance:

MR. CHAIRMAN: I do not know so much as you may suppose. As to the Indians in our own country, I am here to learn, and not to teach; but it is true that I have had the opportunity this summer to see something of the Indians, not only in Alaska, but in Canada. In passing over the Canadian Pacific Railroad, one of the first questions I asked was, "How do you get along with the Indians?" a question that always took the people by surprise that it should be asked, and to which they replied: "Get along with the Indians? Why, we get along with them just as we do with anybody else; we treat them well, and they behave well. For one thing, we have no Indian reservations, and no Indian agents, whose business it is to furnish them with supplies, and whose 'supplies' too often consist of worthless blankets and rotten food. When the Indian finds that the white man does not lie to him, or take advantage of his ignorance to cheat him, he is put upon his own manliness and honor—and an Indian has a good deal of both—to be honest and truthful in return; and hence with us they are as quiet and peaceable as any class of our people."

This was a new view of the character of the red men—that they can be as "truthful" as white folks. And yet here to-day, on this platform, an officer in our own Army, who has spent years among different tribes, has told us that the Indian, "unspoiled by civilization," is one of the most truthful of human beings! Whatever his vices, he will not lie! This was a revelation which made me almost ashamed of my race. I had traveled in other parts of the world, and found that among the Orientals, who make a great show of refinement of manners, lying, so far from being a disgrace, is rather an accomplishment. Of course, it is a blunder if done in a clumsy way; but to deceive with a peculiar grace, without a blush or a quiver of the voice, with a delicate flattery that makes the one deceived happy in the delusion, is really one of the "fine arts" that distinguish a man of the world.

But there are some of us who are so old-fashioned as to cling to the virtues of our fathers, and had rather have the plain, sober truth, even if told in a harsh Indian grunt, than to listen to the soft and smooth deceit of one who can "smile and smile, and be a villain."

Well, now about Alaska. There are not a great many Indians there, for the country is thinly peopled. Alaska, as you know, is an archipelago of more than a thousand islands, scattered along a thousand miles of coast. These islands are for the most part uninhabited. You may sail on for hours and hours and not see a single skiff. If you do see one in the distance, the chances are that it has but a single Indian in it. These native inhabitants are miserably poor, and awaken our pity and compassion. Nor is it only from physical wants that they suffer, but from debasing superstitions.

At Fort Wrangel I went up to the little missionary church, and found two Indians who had just fled from their own tribe, to save themselves from being killed for

witchcraft. Their only escape was to get into their little boats, and steal down the river until they got under the protection of the American flag. It was very touching to see the poor, trembling creatures safe in the missionary church.

But the great trouble in Alaska does not come from the Indians. It comes from the white men who are "prospecting" for gold, and who bring not only their enterprise and energy, but that which inflames the blood of white and Indian alike. The great curse of the country is the introduction of ardent spirits. It ruins the Indians wherever they get hold of it, and it ruins a great many of the whites also. The laws against it are very stringent, more so in Alaska than in any of the States; but I heard on every hand that it was impossible to enforce them. They said, "You can seize smugglers on board the steamships that land their cargoes in the harbor of New York, but how are you going to chase the Indians in their canoes, that can hide behind any one of these thousand islands?"

Some said to me, with an air of pity, "It is a hard case that the poor miners, who climb the mountains, and work all day in rain and snow and cold, should not have the comfort, when they come back to their tents, of a glass of whisky." "Now, ain't that hard?" But I found always that those who argued in that way were quite ready to say, "It is impossible to enforce the law."

This talk about what is "impossible" is an easy way of shifting responsibility, but it is not quite orthodox. In my young days the revivalists were going about the country stirring up the churches. But now and then, just as they were setting a community on fire, the fire was put out by a "douche" of "natural inability." Many and great and learned were the discussions on that subject, till somebody satirized the whole war of words in these fitting and vigorous lines:

You can and you can't,
You shall and you shan't,
You will and you won't,
And you'll be damned if you don't.

To all this a man who is in dead earnest says, "You have no right to plead such a defense till you have at least tried to do your duty." A few such men there are in Alaska. The commissioners at Fort Wrangel made very light of all the difficulties in the way, and summed up the whole case in a sentence: "Let the Government show that it means business, and give us a revenue cutter and two or three swift launches that can overtake any Indian canoe—or white man's, either—and there will soon be an end of this greatest curse of Alaska."

But, after all, the great power in Alaska, as everywhere else, is not in the law alone, but in the law supported by the gospel. The bright points in the northern region where winter reigns, at least in its short days and long nights, over half the year, is in the mission schools, where the poor Indian children are gathered and taught and trained in useful industries. I saw them with delight at Fort Wrangel, at Sitka, and at Juneau. My one regret was that I did not see the great work of missions at Annette Island, where that heroic missionary, William Duncan, has been the means of converting a tribe of savages and cannibals into a community as peaceful and orderly and Christian as any New England village. Such missionary work is the only hope of Alaska, or at least of the Indian race.

But, brethren, do not take any traveler's tale, but go and see for yourselves. Go, if you would look upon scenery more wonderful than that on the coast of Norway or in the Greek or Malayan Archipelago. In Alaska you trace the hand of the Almighty in the convulsions which have shaken our globe, in the islands which seem as if they had been thrown down from the tops of the mountains, and to which the great ocean had come up and wrapped them in its loving arms. The west wind and the Black Current of Japan, which is the Gulf Stream of the Pacific, bring them warmth and moisture, till the rocky islands are covered with verdure, waiting for the millions that are coming to possess them, and to build here their summer retreats, as the men of Boston build theirs on the rocky shores of the Atlantic. Here are to be, in the future, the seats of wealth, of learning, and of Christianity. Anticipating all this, it seemed to me, as I sailed down that coast, as if the very mountains covered with snow were white-haired prophets, who looked out upon the future, as upon the great ocean at their feet, and foretold the time when the earth should be full of the knowledge of the Lord, as the waters cover the sea.

Adjourned at 10 p. m.

FIFTH SESSION.

FRIDAY MORNING, *October 12.*

The conference was called to order at 10 a. m. Prayer was offered by Rev. Theodore Cuyler, D. D.

A VANISHING POLICY.

President GATES. There are one or two things to be borne in mind in our discussion to-day. Our policy for the Indians should be a vanishing policy. We do not want to provide for the perpetuity of this system. Ten years ago we heard the cry, "There is no law for the Indian." He could not be made a citizen. Some of you will remember hearing Captain Pratt at a meeting in New York advise his Indian students that the only possible way for them to become citizens of the United States was to go out secretly in a rowboat and meet, below Castle Garden, one of the incoming immigrant steamers loaded to the water's edge with ignorant foreigners, and, managing to get on board, to "lose themselves" among the Europeans who seek citizenship, and coming into New York with them, to be naturalized in the way provided for any and all people on earth except the original Americans. In this way they could become citizens, but in no other way. Now we see that the swing of the pendulum is in the other direction, and there is danger of making them American citizens faster than they are ready for the duties of citizenship. But they will learn the duties of citizenship by being citizens.

Then we heard it said that unless we set up separate Indian courts of elaborate machinery we could never get rid of this problem. We are seeing now a line of hope along the way which Mr. Austin Abbott has indicated. We are becoming convinced that one law will do for white man and red man; and we want the attainment of this end to be our policy, so far as we can shape a policy to that end. And this conference has really shaped the Indian policy of the nation for the last few years.

Then, when we consider the land question, we want that to be a vanishing policy too. If it were your son or mine in question we should not want to have the principle of the survival of the fittest applied to him in his inexperienced youth. We should want some friends around him, some interest taken in protecting his first employment of his rights. That is what the protected title for Indians means. We take another step, and say that the Indian should work out his road tax, and that we should provide (from funds held in trust for him) for the payment of such part of other taxes as will take from his neighbors the feeling that they are being unfairly burdened by reason of his untaxed land, held untaxed under this temporary "protected title." But we will not do away with all restrictions, if they are not able to manage their own property. We know how the "land sharks" would take advantage of their ignorance. If it is for the best interests of an Indian here and there to lease his land, then either provide a special commission by which his request to be allowed to lease shall be examined, or, much better, treat him under a uniform law, as we treat the not fully competent white man who needs some guidance and protection, and let the courts pronounce on the desirability of his alienating or leasing his land.

Now, as to agents. We can not get along without agents for some years to come. We hope before many years to reach the point in this reform when the agent can be dispensed with, but not now. There is a vast difference between the lowest of the Crows and the most advanced of some of the other tribes. If the Government and the friends of the Indian do not look after the interests of those who need supervision, then worse men will look after them. Let us for the present demand well-qualified agents with suitable pay. If the President of the United States would say that no agent shall be appointed unless approved by the Commissioners of the Civil Service or by other reputable men who are without partisan bias and are competent to judge, these appointments would be put beyond partisan changes. President Cleveland has proved himself fearless in many matters. Let us urge him to do this, and let us assure him of the sympathy of the most intelligent people of the United States in such a step.

As the discussion goes on, we shall feel that there is room for progress in the educational system. We may feel that we are beginning to see the beginning of the end, when the educational system shall be entirely apart from the Indian Bureau. That can not come at once; but the direction of Indian schools may be given to the Bureau of Education instead of to the Indian Bureau. We happen now to have a United States Commissioner of Education whose philosophic attainments, professional knowledge, integrity of character, and ability command the entire confidence of the people. Could there be a better time to inaugurate such a change?

Through these transition years let us "look to the hills whence our help cometh." We must remember that India is crying out for a Christian education after having

tried a purely secular education. We must not leave Christian influence out of our plans. More Christian work must be done by the religious denominations. If the public school work is taken up by the Government, then the distinctively religious work must be done with redoubled energy by the churches.

Dr. W. N. Hailmann, superintendent of Indian schools, was then introduced, and spoke as follows:

EDUCATIONAL WORK FOR THE INDIANS.

[By Dr. W. N. Hailmann.]

Before I speak on the subject assigned to me, I want to say that I seem to have failed to make myself perfectly clear when I spoke on Wednesday. I have been quoted as having said that the Government should control all the Indian schools. I am very far from that position, and I regret exceedingly that I was so awkward as to give anyone this impression. What I meant to say was this: That as soon as possible all Indian education should be in the hands of the respective States in which the Indians are found; that the States of Minnesota, Michigan, Wisconsin, should take as strong, earnest, and intense an interest in their Indian citizens and the children of their Indian citizens as in the children of their white citizens. I am now on the eve of starting for those States and others, in order to enlist the attention of the educational authorities in those States, hoping to secure active efforts toward bringing Indians into the State institutions. I think this is along the line so clearly brought before us by Mr. Austin Abbott. It is bringing the Indians, with reference to education, under the same agencies in which the white citizen grows from childhood into independent manhood.

With reference to the position of Indian superintendent and the necessity of making that position independent of partisan control, I think I could entertain you for a long time relating experiences that have come to me within a few months.

When the Secretary of the Interior called me to this work at the instance of some friends of mine and of the work who had spoken to him on the subject, I was called there without reference to any partisan affiliation of my own. At least I was not aware that my partisan affiliation had anything whatever to do with this call. I was assured by the Secretary of the Interior that it was his earnest desire to divorce Indian schools from partisan influence. I hailed this sentiment with a deep sense of gratitude, for I had long felt in my work in public schools that the partisan control of educational interests was a constant curse in the development of these interests. I was also deeply grateful that, under Providence, the Secretary of the Interior should have selected me to seek this new light.

I was sent to the Indian Office to find out what my duties were. I discovered that they were exclusively of an advisory character. I had the privilege to see, to hear, and to say what I heard and saw; to make some suggestions here, and there some recommendations; and then that was the end. My recommendations might be received or might be rejected, according to the wishes or desires, perhaps, of the Commissioner, perhaps of the Assistant Commissioner, perhaps of some of the chiefs of divisions interested in the recommendation. I discovered also very soon that the influence of partisan control had not entirely fled as yet from the Indian Office, however desirous the Commissioner was to aid me in the matter, and that consequently action upon my recommendations was not necessarily safe from the influence of partisan considerations.

I waited again upon the Secretary of the Interior, and I have no doubt he saw the grim humor of the situation as clearly as I saw it. In consequence of this, he defined the position and powers of the superintendent of Indian schools as follows:

"It shall be the duty of the superintendent of Indian schools to administer the educational work of Indian schools; to organize the Government schools for Indian youth; to examine, select, and assign to duty superintendents, teachers, matrons, and other employees in the school service; to prepare courses of study and circulars of instruction concerning the educational management of the schools and methods of work; to examine and select text-books and other school appliances; to devise a system of reports from agents, superintendents, teachers, and matrons concerning the conduct and progress of the schools; to visit and inspect, in person or through accredited agents, all schools in which Indians are taught in whole or in part from appropriations from the United States Treasury; and to report to the Commissioner of Indian Affairs concerning their condition, defects, and requirements; and to perform such other duties as may be imposed upon him by the Commissioner of Indian Affairs, subject to the approval of the Secretary of the Interior."

This seemed to be quite satisfactory, and I felt fresh courage. But I discovered very soon that this new rule had brought consternation to some hearts to whom patronage is as dear as the welfare of the Indians. It came to me that there was in certain quarters a determination to make it so very warm for the superintendent of Indian schools—which was an unpleasant promise, considering the approaching hot season—that he would be out before the 1st of July. This announcement was made

to me early in March. I did not care to fight for the position for myself; but I consulted with the Secretary of the Interior, with the Commissioner of Indian Affairs, with other friends, and my own conscience and intuitions, and I came to the conclusion that a power higher than that of these men had called me to this office, and I concluded to be faithful to my trust. I am still in office, and the prospect that the influence of my office will diminish is vanishing encouragingly. Still, I found in the course of the conflict that the pressure of patronage brought to bear upon officials began to modify this declaration in the new rule, in spite of the policy of the Secretary of the Interior and the Commissioner of Indian Affairs. I found that, whereas I was said to examine, select, and assign to duty superintendents, teachers, matrons, and other employees in the school service, this was being virtually contracted to employees in the classified service. You will readily see that patronage would have no special interest in the employees in the classified service, because it could not possibly select them. It had a great deal of interest, however, in the unclassified service, as here it might select by the old methods. I protested, and in many cases with success.

I came more and more to the conclusion that there was an incongruity somewhere in the work; that I, as a representative of freedom from all extraneous influence in the control and conduct of Indian schools, was myself in a measure under the control of the very factor which I had been called to stand against.

Now, it is for the people to decide how this is to be done. It is for Congress to decide. It is for the Secretary of the Interior to propose, it is for you to suggest, the right measures in this direction. I was delighted to hear your President make the suggestion of placing the interests of the Indian school under the direction of the Bureau of Education. Nothing could be more appropriate, and that it is feasible has already been shown by the experiment made with Alaska. The Bureau of Education is necessarily a permanent bureau in the government of this great nation, and it will make no effort to perpetuate the Indian interest for the sake of perpetuating itself.

Under the direction of the Bureau of Education specific Indian schools would probably disappear more rapidly and surely than under any other agency of the Government. That is a thoughtful suggestion, and I commend it to your consideration.

General WHITTLESEY. Please explain to the conference what positions are included in the unclassified service.

Dr. HAILMAN. The classified service includes superintendents, assistant superintendents, teachers, matrons, and physicians. The unclassified service includes assistant matrons, industrial teachers, seamstresses, cooks, laundresses, boys' matrons, and girls' matrons. The farmer also is unclassified.

The position of matron is as much educational as any in the school. The welfare of the school depends on the persons occupying the unclassified position. The disciplinarian has a most important position. He is practically the assistant superintendent, and should be in the classified service.

General WHITTLESEY. Has the President of the United States, under the civil-service rules, a right to include these unclassified positions in the classified?

Dr. HAILMAN. He has.

President GATES. At the time of the last meeting of the Indian Commissioners in Washington a committee called on President Cleveland, and he gave us to understand that it would be a great personal relief to him if all Indian officials were under civil-service rules.

Mr. P. C. GARRETT. If the conference were to ask for a further expansion of the civil-service rules in the Indian service rules, which positions would you ask for?

Dr. HAILMAN. I would ask for the industrial teacher, seamstress, disciplinarian, and assistant matron.

Dr. PROUDFIT. What are the duties of the disciplinarian?

Dr. HAILMAN. Largely to assist the superintendent. He is practically an assistant superintendent. He makes the detail of work among the boys for the various industrial and economic departments of the school. He has the military drill, and sees that the general regulations are carried out. It is a very important position if properly attended to. He is the right hand of the superintendent with reference to the management of the school.

Gen. CHARLES H. HOWARD. Does Dr. Hailman know any reason why these employees should not be classed in the civil-service classification?

Dr. HAILMAN. No inherent reason.

Mr. SMILEY. One gentleman has suggested that the Indian education be turned over to the Bureau of Education, that it be connected with it as rapidly as possible. Would there not be danger of conflict, the agent being appointed from the Indian Office, and possibly from partisan reasons? Would he not hamper the appointees of another bureau? The teacher wants to get scholars in, and has to call on the agent

for that power. If they are appointed from different sources, will there not be trouble on that account?

Mr. HAILMAN. I think it is possible that there might be conflict. If the supervision of the Indian schools were placed in the hands of the Commissioner of Education the relationship that should exist between him and the officers of the Indian Bureau and the agents should be formulated and defined.

Mr. SMILEY. Do away with the agency, and you are all right.

President GATES. Do you think the danger of conflict would be greater than we find practically between the agent, who holds office through the influence of party, and the teacher, who goes out in another way?

Mr. HAILMAN. I do not think the conflict would be more sharp than it is now. There is the same conflict now. The agent is the representative of partisan influence. I respect politics, but I have no respect for partisanship.

General Eaton was asked to speak.

General EATON. I am reluctant to say anything on this subject. You have touched a point sensitive beyond description. We are here enjoying the presence of Dr. Hailman. His work is in the line of our theories. I believe the Secretary of the Interior has taken a great step forward in giving this definition to the office of superintendent of Indian schools. But it was only through the efforts of Professor Painter and others that the office was saved at all. And then it was saved with a reduced salary, which any one of us, as an American, ought to be ashamed of. We rejoice in the work of Captain Pratt, and yet not an appropriation bill goes through Congress without a fight over the retention of Captain Pratt.

President GATES. More's the shame.

General EATON. A thousand dollars has been taken off from his pay.

[Cries of "Shame! shame!"]

General EATON. Let us not forget these things.

Let these men have something behind them in the law. This organization and other organizations of like character may drive at the law. It has been the impression of some Congressmen that the members of the Mohonk Conference were a lot of cranks and sentimentalists; and last winter they said, "Now we are going to have practical legislation this Congress." What was the line of their plan? The abolition of superintendent of schools and of the Board of Indian Commissioners who, since the days of Grant, have been leading the sentiment of this country in the right direction, and relieving the country of the shame of the centuries. They reduced the salary of the superintendents, and abolished important offices. The efforts of Professor Painter and others saved much last winter. How much they will save next year depends on your efforts. Miss Foote and Mrs. Quinton led the woman's side magnificently.

Now, with reference to this sensitive point. Early, when I went into the Bureau of Education, it had been agreed, when I was asked to take the place, to let the office die by omitting the appropriation, as they would kill the office of superintendent of Indian schools now. General Grant said to the gentlemen giving him this information, "No, we have abolished slavery, and education must perform a large part in the solution of questions coming out of the abolition of slavery; and we ought to try this office farther. You ought not to cut off this appropriation." And, under his influence, it was not done. I was asked to take the place. I saw its difficulties. I knew the importance of the office; and, after a time, I said to him, "General Grant, you have put me through some terrible places; but I find, if a man behaves himself decently, you take care of him, and I will consent." Our friend Mr. Dawes said to me, "Give me your figures, and you shall have what you need in the way of appropriations." I mention these things to show you what an exceedingly sensitive position the office of Commissioner of Education was. For years such a man as S. S. Cox, whose ambition was in literature, every time the appropriation came up moved to strike the whole thing out. Out of that condition of things there has come a bureau that I may say—speaking from an experience of some sixteen years—is the most influential office in education in the world to-day. We shall go on, as long as we live, learning the peculiar characteristics of Grant's mind, and his tremendous foresight. He outlined to me the solution of the negro problem before the freeing of the slaves. General Grant had the idea that this very moment has been mentioned. The question of Indian education came up at one time and he said, "I would very much like to see the administration of Indian affairs so carried on that everything could disappear but education, and that could come into the Bureau of Education." You may judge that I was interested when I heard our president to-day expressing the same sentiment.

Yet I must say to you that I found it most essential that the Bureau of Education should have the one single object in view—the organization of information. We do not apprehend the force of that. We move by moral forces in this country, and they are directed by information. It has strength behind it. Yet, when I resigned, they said, "Now the Bureau may be abolished." It can not be. It is a part of

American thought and American organization. There is a tremendous demand for that which it can supply. You must outline very carefully what you want done before you can touch or injure this important office of education. There was perhaps never a Congress while I was in the Bureau but some member would come to me and try to talk with me about bringing Indian education into the office. I always said, "Not now." And so I say not now. It is really dangerous to talk about it now; but the time may come.

Mr. HERBERT WELSH. It is always a matter of great encouragement and inspiration when in a conference of this sort, where necessarily men and women differ upon so many questions of detail, we come face to face with some great principle which we hold with enthusiasm and regarding which we are a unit. I think that Dr. Hailman's concise and definite words have brought us face to face with such a principle, and that we all see, no matter how much we may differ as to the best method for applying the principle, that the spoils system is the great curse and hindrance of our Indian work, and that the idea of appointment for merit and retention in the service during the proper performance of duty—that is the principle which we desire to see adopted and maintained.

I can not help saying here—because it is germane—that many of us who have been forced to consider civil-service reform upon the lines of its application to the Indian service have been made to feel that a window was opened in this narrower work through which we glance out upon a broader field—upon the entire range of the Government service; and that we have been led to believe that the whole range of American life, public and political, must ultimately be brought under the control of this great fundamental idea—that the Government service is to be conducted not with a view to reward men for mere narrow partisan—and often very disreputable—service, but with a view only to promote the public welfare. That is the principle which we are facing now, and this question of education seems to touch it fundamentally. How can we, as a band of earnest men and women heartily desirous of the welfare of these poor people in the quickest and simplest way, both retain those victories which we have gained by so much effort and so many years of toil, and logically and carefully take the next step? This seems to me to be the situation; and, in order to make it as clear to your view as it is to mine, I will detail a few of the incidents occurring last winter, some of which have been referred to by Dr. Hailman.

The Secretary of the Interior did me the honor, previous to the appointment of Dr. Hailman, of asking me to come to Washington to talk over the question of the superintendency. He stated frankly and directly his views on the subject, and asked me if I would make investigations regarding the fitness of Dr. Hailman for the post. His appeal to me was as the representative of a large number of persons interested in Indian affairs, virtually as one of the representatives of this conference. I took steps toward making such an investigation by making inquiries of a number of gentlemen whose position in the educational field was such that their word would come with weight and authority—Mr. Capen, of Boston; Dr. McAlister, of the Philadelphia Drexel Institute, and others. The answer from all was such as to convince me that in the intended selection of the Secretary we had a man who represented the best educational thought of the country and its most judicious practice. I could but feel that here at last a hope was held out of a great development of our Indian educational work. The Secretary stated that it was his object to secure a man outside of the limits of partisan appointments, who would be regarded as an authority in his special field. When I went to Washington and had this prolonged interview with him—through his courtesy, some five hours—he stated his plans verbally with great fullness. It was perfectly evident, however he might succeed, that his object was to lift the school service out of partisan politics, and to bring it abreast of the public school system of the country.

I pause here to emphasize the importance of such a declaration. The fact that a member of the Cabinet, at the head of a great Department of Government work, should express such an intention was most significant. And it seemed to me that it was due to him and to the cause that that fact should be immediately made known to the friends of the Indian, and that everything should be done which could support the Secretary in carrying out his intentions.

The rest of the story is very well known; and it is not necessary to say more except that, in an interview with the Secretary, I advanced this thought that, so far as we had gone, even if his intention were carried out during the present Administration, we had no assurance that his beneficent plan for the Indian service would be continued, and permanence was absolutely required in order to reap the ripest fruits of success, and that it seemed to me most desirable that some act should be presented to Congress by which the duties of the superintendent would be so defined, the object of the position would be made so clear, and the protection of law would be thrown so effectively about that position that continuity of purpose might go on through succeeding Administrations. As things now stood, the good work done by

one Administration, representing one political idea, was subject to complete overthrow and reversal by the next. The Senator stated—and he further assured me of this in the presence of Mr. Proctor, one of the Civil-Service Commission—that it was his intention to present an act to Congress defining the powers of the superintendent of Indian schools, which might carry out this idea. Now, the object of my remarks this morning is to ask this conference whether it is not most desirable for us to recognize publicly with gratitude the expressed intention of the Secretary, and to assure him of our support, and of the support of the men and women of this country of whom we are representatives, in carrying out this plan. If we can secure this, we are *en train* to obtain that which we have never had before—the lifting up of the whole Indian educational service out of the miry bog of partisanship, which now means chaos, inefficiency, and failure to carry out any idea to its conclusion.

If such an act be passed, then we have the Indian educational system no longer repelling men of high position, character, and cultivation, who might be called into this service in the future, but attracting such to it. We should have the system elevated to the plane of the best of our public-school systems—brought into that condition which will most certainly effect the absorption of the Indian into the simple national life about him.

I do not think that anyone can doubt, no matter how we may differ as to the methods by which the end is to be attained, that in a comparatively few years the Indian who now stands on the island reservation will be absorbed into the great common sea of American civilization which beats upon its shores. And one part of that absorption, indeed that which will assure an honorable and noble absorption, is that the educational idea of America, the public-school idea, with all its light, its equality, its freedom and fresh air, shall be brought to bear upon the Indian. Within a few years he must be taken out of the island reservation. And, if we can so arrange it that he and his children shall be turned out not to pauperism and vagrancy, vice and crime, and to unfailing hatred of the race which has cursed him, but into the benefits and privilege and responsibility and power which we possess, then our work will be accomplished. The recommendation to the country of the plan contemplated by the Secretary would seem to me to be the most natural and powerful step in the direction of success. I would suggest that, in addition to any other utterance made by us, we should let the country, and especially our representatives in Congress, know that we desire that such a measure as I have indicated shall be done, so that Congress shall feel that the country demands suitable appropriations for Indian education, and a suitable and dignified elevation of the office of the Indian superintendent of schools for the accomplishment of the object in view.

General EATON. The national superintendents of schools at their meeting passed a resolution thanking the President of the United States and the Secretary of the Interior for retaining Dr. Harris and for selecting Dr. Hailmann. Mr. Smith is earnestly seconding the ideas of the President in the matters of education all round. He is an educational man. Years ago, when we were looking over the South for a man to respond to educational ideas, we found a professor in the University of North Carolina by the name of Smith. He was then acting superintendent of schools. He had one boy, who was present at our conversation. That boy was Hoke Smith, and he is now Secretary of the Interior. He is interested in education by choice and by inheritance. It is this Hoke Smith who is organizing Indian education under Dr. Hailmann. You do a most proper thing to thank him and to thank the President.

On motion it was voted that the president should appoint a committee to wait upon the President of the United States and the Secretary of the Interior for this purpose.

Dr. HAILMANN. The fact has been referred to that an effort was made to abolish the superintendent of Indian schools in the last Congress. The effort failed, and yet the superintendent of Indian schools has been seriously hampered by the action of Congress. They reduced the number of supervisors who were his helpers from five to three, so that there are now only three in the service. The forces in the Indian Office who are not favorable to the existence of such a position as superintendent of Indian schools have managed to tie up those three supervisors as temporary superintendents of schools, so that he is practically without help. In addition to this the Secretary of the Interior had given to the superintendent a confidential clerk, recognizing the fact that he had a large field to cover in his investigations. By an unfair construction, as I consider it, in the absence of the Commissioner of Indian Affairs and in the absence of the Secretary of the Interior, the discharge of his confidential clerk was secured. Whether I shall be able to secure the reappointment when the Secretary returns, I do not know. In order to carry on the work, I have had to employ this confidential clerk at my own expense.

President GATES. He does that out of the amount that Congress took out of his salary.

Mr. SMILEY. I want to say that Dr. Hailman had an offer of a position at Los Angeles with much higher salary, but that he is holding on to his present office for the good of the country.

President MESERVE. Although I am now at work among the freedmen, I still have a deep and abiding interest in the Indian race, and try to keep well informed as to the progress of the work. When, last May, Mr. Herbert Welsh asked me if I would make a trip in behalf of the Indian Rights Association, I consented. I left the East May 25 and returned the 2d of July, having been among the Navajoes of New Mexico, the Poncas, Pawnees, Otoes, as well as the Cheyennes and Arapahoes of Oklahoma. I also spent several days at Haskell Institute, the United States Indian industrial school at Lawrence, Kans. I was told to keep my eyes open, and see what progress civil-service reform was making in the field, what the spoils system was doing in the field, and also to note carefully the results of the allotting of land in severalty. In ten minutes I can tell you only a very small part of my observations. At Fort Defiance, Ariz., I found Lieutenant Plummer, acting Indian agent, in charge of the 20,000 Navajoes. His heart is in his work, and his influence is strong for good in all directions where the Indians' highest good is concerned; and he should receive the hearty sympathy of this conference.

First, with reference to civil service. I found at this agency that only one or two changes had been made since the advent of the present Administration. Those in the classified list had been protected, and the few changes that had been made were in the unclassified list. There was at Fort Defiance a school of 199 Navajoe children. A few months before my visit the school numbered scarcely 50, and never before in its history had the attendance exceeded 99. For reasons of which I am ignorant I understand that Lieutenant Plummer is about to leave. It is a hard place for an Indian agent. Far from civilization, with scarcely any conveniences for carrying on the work, and with inadequate help in the office, it requires a man of almost superhuman strength and courage to continue as agent of the Navajoes. I understand full well that the condition of affairs is not the fault of the Indian Office, but because of the failure of Congress to make the appropriations that are necessary and that were asked for by Lieutenant Plummer. The reservation is half as large again as the State of Massachusetts. Word came to the office, while I was there, of trouble at a certain place; and inside of a half hour word came again that he must go to a distant place in the opposite direction. It was as though he had been located in Boston and received word that he must go by horseback or over a rough carriage road to Provincetown to settle some dispute, and then as soon as possible thereafter start for North Adams, and make the journey in the same way. With the lack of suitable help to carry on the agency, I could understand why it was that every night while I was there I went to sleep at midnight to the music of the typewriter that he was operating himself, trying to get up the quarter's accounts.

I found the Navajoes in a pitiable condition. They are in great need of food, and I fear that many will suffer during the coming winter, if rations are not issued to them. It has been the general understanding that the Navajoes were wealthy, and, as they have never received rations from the Government, that there was no need of help from the Government. Such, however, is far from the actual fact.

From Fort Defiance I went to Darlington, Okla., the headquarters of the southern Cheyennes and Arapahoes. I found at this agency there had been very few changes in the employee force. I came to the conclusion that where there were military officers as agents the politicians did not exert the influence that they had been accustomed to where civilians were agents. I understand, however, that just now it seems to be the plan to remove the military agents and place civilians in their place, and that the civilians that are appointed shall be in sympathy with the present Administration. If this is the case, it would seem that the spoils system is again to be allowed to have full play.

During my stay on the Cheyenne and Arapahoe Reservation I went to Seger, Okla. If there is a civilian in the Indian service that deserves in the highest degree the hearty support and sympathy of this conference, I feel it is Supt. John H. Seger, who has been in the service more than two decades, and who is still holding the fort, notwithstanding the attempts that have been made to deprive him of his clerk and farmer, who are very efficient on account of their experience and familiarity with the duties required.

One day there came to the Seger school a man who announced that he was a United States Indian inspector. He arrived at 5 o'clock in the afternoon. Superintendent Seger was out in the field at work; but when he came in he found the inspector had gone to the town near by. He had an interview with a discharged Republican postmaster, and his mind was poisoned. He came back to the school, and said to Superintendent Seger, "You have some Republicans in the service here." Mr. Seger replied that he was not influenced by political considerations in nominating his employees, and added that his clerk and farmer took no part in politics. The inspector said, "It seems very funny that you can not find any competent Democrats to fill these places." Mr. Seger replied that he did not ask a man his politics. Mr. Seger has been so long with his Indians that he loves them almost as dearly as his children, and wishes to see his far-reaching plans for their welfare carried out. His

aim is to put the school on a self-sustaining basis. He has plans with reference to raising wheat, corn, oats, and other products, as well as cattle and swine, and I know that in a few years, if he could be allowed to continue as he is now going on, he will make the institution self-sustaining. He can not do this, however, unless he has with him employees who are competent and experienced. The inspector went away at 11 o'clock the day after his arrival. In a few days word came that the farmer must go and that a man from Georgia, who would not know a lister from a go-devil, would arrive to take his place.

The morning after the arrival of the new farmer he went out into the field to work, but soon came back, and said to the superintendent, "The Indian boys can do the work better than I can. This is no place for me. Let me have some paper and a pen and ink." He went into the office and wrote a letter to the Secretary of the Interior resigning his position, saying he was not qualified for the work of the farmer, and that the farmer whose place he had taken was so competent that he hoped he would be retained in the service. He took the stage the next day, and started for Georgia. An attempt was also made to remove his clerk. Fortunately, Mr. James and I were there about that time. We wrote long letters to the Secretary of the Interior; and a few months after, while calling on him, he said to me: "I got your letter. It seems as though you want to keep all the Republicans in office." I said, "No; we want people of ability and love for the work and experienced in the work to be retained, whether they are Democrats, Republicans, or Populists."

I spent several days among the Poncas, the Pawnees, and Otoes, and found that there was scarcely an old employee left over from the preceding Administration.

During the four days I visited Haskell Institute. I looked very carefully into all departments, and found that excellent work was being done. I was especially interested to note that scarcely any changes had been made from political considerations, and that almost no changes had been made for any reason whatever. This explained to me the excellent condition in which I found everything, for the large force of employees has been in the service on an average for four years or more, and there were some instances where they had been there or at other schools in the Indian service for periods of even ten or more years.

Mr. Meserve then presented the following resolution, which was unanimously referred to the business committee:

"This conference wishes to thank President Cleveland for adding to the classified list the position of assistant teacher. It also requests him to still further enlarge the classified list by adding thereto all the remaining unclassified positions except that of agent. It recognizes that the pressure the Chief Executive has to withstand is enormous, but nevertheless believes he can, in a remarkable degree, signalize his administration by applying the spirit of his own public utterances upon civil-service reform to the selection and retention of agents. In doing this he will receive the support of this conference, as well as the approval of the great mass of the people throughout the country, regardless of party, and be the means of placing the administration of Indian affairs upon a higher plane of efficiency than ever before."

The following letter from Mr. Seger was submitted for publication:

[Department of the Interior—Indian school service.]

OFFICE OF SUPERINTENDENT, INDIAN INDUSTRIAL SCHOOL,
Seger, Okla., September 26, 1894.

MY DEAR SIR: The invitation to attend the Twelfth Annual Mohonk Indian Conference, forwarded under your care, was duly received. It is with regret that I have to inform you that it will be impossible for me to attend the meeting this year. Perhaps, should my life be spared another year and the opportunity be offered, I can avail myself of the privilege.

I have always read with great interest the doings of the conference, and am always interested in the conclusions which are arrived at there. Such conclusions are always logical, and show great familiarity with the Indian question.

* * * * *

It has been a cause of regret during the time the Government and the churches have been endeavoring to civilize the Indian that more persons have not devoted their lives to the work, and lived out, in the very midst of the Indians, the examples we wished them to follow and to practice. It is wise to have a good, well-defined Indian policy, and to have appropriations sufficient to carry it out; but it is necessary to have persons on the ground who are competent to carry out the policy, and to see that the money and means furnished are wisely applied. Like other occupations it requires experience and personal acquaintance with the work, in order to fit any one for the service. When this is obtained, perhaps at the expense of the Government, and the person is fitted to do practical work, the Government should avail itself of that employee's services as long, at least, as the person is willing to continue

in the service and do good practical work. In the past, under my own observation, this has not always been done; and, correspondingly, the work has been retarded.

I am glad to see that from year to year the tendency is toward giving due appreciation to efficient employees in the Indian service; and, in so doing, the cause of civilization is being advanced. In my own experience I find that a few months or years is too short a time in which to teach a heathen people the arts and methods of civilization, and to have them adopt habits different from what they have been accustomed to for generations.

I assumed charge of this school after about eighteen years' residence among the Cheyenne and Arapahoe Indians, which time was mostly spent in endeavors to civilize and educate them. My experience taught me that the greatest good could be accomplished through schools, and that they would prove the most potent factors in the effort of the Government to "solve the Indian question," and at the same time keep the adults following along in its wake.

I believe an Indian boarding school should be largely, if not wholly, self-sustaining. This school was started with this aim in view, and thus far in its short career (having only been in operation since January 11, 1893) we have so succeeded that we are now able to furnish 75 per cent of the subsistence used by the school. We have now only one-half of our school reservation under fence and cultivation, and I believe that when the plant is fully developed and stocked up we will be able to make it fully self-supporting. This, I believe, should be the policy of all Indian boarding schools where there is sufficient land for cultivation and grazing.

There is one thing connected with Indian education that seems to retard the results desired, which is this: For instance, at this colony where our school is located, only about half the children that are of school age can be accommodated; the other half are left in camp to grow up under the tutorage of their parents, who, of course, train them in the customs and superstitions of their tribes. Those we now have in school must go out from here and affiliate with those brought up in camp; and as the natural tendency is downward, we will lose a large per cent of the progress made by the "pulling down" influence of the noneducated Indians. Notwithstanding this, the whole tribe will be as much better for the influence of the school as the educated would be worse for the association with camp influence. What I want is school facilities sufficient to accommodate every child in this colony. I would have every child with its face turned toward civilization, and making progress according to their several talents. In the meantime which way would the face of the parents be turned? Toward their children and their future, of course. A prominent Cheyenne, who had never before put his children in school, recently put all of them under my care, saying: "Tell me how to make a home and live a civilized life. I find that I must do this or lose my children, as they are being educated away from me, and I must follow them while I live."

Before the school had started, and while I was farmer for the Indians, I had labored in vain to get this Indian interested in making himself a home; but now his children have turned his thoughts in this direction simply by going to school. Thus "a little child shall lead them."

I have asked for an additional building, but have not yet succeeded in getting it. One year ago I asked for a larger building, and was told that there was room at other schools for all that could not be accommodated here. One year has passed, and not one of those children has gone to other schools, neither can they be sent away according to present regulations until they have been four years in the home school.

Thus you see that upward of 60 children of this colony are now growing up in ignorance, who would go to school if there were an opportunity to do so near their own homes. Could they be put in school, the parents of 50 more children could be drawn toward civilization by the love they bear for their children.

One of our school girls became defective in sight at the commencement of this term; and I told her father that he had best not put her in school this year, as she could not see well to study, and that her place was needed for some other child who could see. The father said that it was true that his daughter could not see well, but that her hearing was good, and she could hear the hymns sung and prayers offered, and it would keep her from growing up with a bad heart. The girl is yet in school, and under the influence her Indian father chose for her.

Our school is overcrowded. We now have enrolled 15 more pupils than our building should accommodate. I have not the heart to send them away to a place where they will not hear a hymn sung or a prayer offered.

While it would be a pleasure to be at the conference on account of what I could learn, yet I would prize the occasion more for the opportunity it would afford me of meeting ladies and gentlemen of influence, and, perhaps, some officials of the Indian Office to whom I might make a plea for a larger school building.

For \$2,800 I can erect a building sufficiently large to accommodate 40 more chil

Aren. I can furnish \$1,000 of this amount by the product of our sawmill and work and material furnished on the ground by the school force.

The expense of taking these children to Carlisle and return would be \$70 each. This would amount to \$2,800, the cost of the proposed building. Then, as we can make them from the start earn 75 per cent of their own living, with a prospect of their soon being able to earn it all, I do not know what more is required to show the wisdom of giving us increased facilities.

In this letter I have endeavored to point out the way to civilize the Indians of this colony, and all that is lacking in the accomplishment of the plan is the means to carry out the undertaking. To do this, every child should be provided with an opportunity to attend school near its home, where its influence will be of benefit to its parents. Everything I have learned in twenty-one years' work with these Indians points to this plan. As we are now situated, with four sections of land which can be cultivated for use of the school, we can so far reduce the expense of education that it should not stand in the way of providing the plant to properly care for and educate such pupils as seek and beg for entrance.

If you can in any way bring this matter before persons in attendance at the conference that could assist me in procuring what we need, you will have accomplished an act of lasting benefit to these Indians and the cause of Indian education.

With kindest regards and best wishes for successful meeting, I am,

Very truly,

JOHN H. SEGER,
Superintendent.

Hon. DARWIN R. JAMES,

Member Board of Indian Commissioners, 226 Gates avenue, Brooklyn, N. Y.

DARWIN R. JAMES. As a member of the Board of United States Indian Commissioners, I made an extended trip in May and June; but in the time allotted to me it will be impossible to go into details, but I am anxious to present a few salient points.

First, as to the Navajoes; they are in an extremely destitute condition. Heretofore they have been self-sustaining. It has been the general impression that they were possessed of ample wealth, with their large flocks of sheep and their droves of ponies, their blanket weaving, and other sources of revenue; but, whatever they may have been, they are very destitute at the present time, and, unless relief is furnished, it is feared that many will perish. The agent, Lieutenant Plummer, informed us that a bill was introduced before adjournment of Congress appropriating \$25,000 for their relief. It is a matter of great importance that it be passed early during next session. The Navajoes have never received aid from the Government, and would not ask it now, except that a succession of four unusually dry seasons prevented them from getting much in the way of crops, which, added to the extremely low price of wool (5 cents per pound), their inability to sell sheep or ponies because of the hard times, has forced them into their present condition.

They had great hope early in the spring that some relief would be afforded through the development of irrigation, there being in the United States Treasury \$62,000 available; but they were doomed to disappointment. Mr. Vincent, the engineer who had been sent out to have charge of the work, was practically doing nothing. President Meserve, whom I had the pleasure of meeting at Fort Defiance, and myself had a lengthy interview with him; but nothing came from it so far as we heard. I understand he has lately been removed. The agent, Lieutenant Plummer, was fulfilling the duties of the office with great acceptance. He had gained the respect and love of the Indians to a remarkable degree. The children of the school, particularly the smaller ones, hung around him continually when out of school, showing the utmost confidence in him. It was an interesting sight. Plummer is a grand man; and I sincerely hope he may be induced to reconsider his resignation, which was recently forwarded to the Indian Office. I have reason to believe that the honorable Commissioner regrets that he sent it in. And here let me say a word or two upon the subject of detailing army officers to act as Indian agents. It will be recollected that the Mohonk conferences were not altogether favorable to such a course, in fact, were rather opposed to its being done; but my observation upon this trip leads me to speak favorably of the action of Congress in providing for such a course. Three out of four whom I met were doing excellent work. I see no objection to mentioning their names—Lieutenant Plummer among the Navajoes, Captain Bullis in charge of the Pueblo Indians, and Captain Woodson, at Darlington, Okla., in charge of the Cheyennes and Arapahoes.

Second, as to the Cheyennes and Arapahoes. Captain Woodson is making a strong effort to get the Indians upon their allotments, and I think he is meeting with some success, at least he is succeeding in keeping them away from the agency. He allows no Indians to loaf around headquarters. In fact, I saw scarcely any Indian police or employees at Darlington. He subdivided the land, which was the reservation before allotments were made, into nine portions, over each of which he has a farmer, whose duty it is to advise and assist the Indians in all ways possible. The plan is working

so well that he desires to still further subdivide and appoint more farmers as sub-agents, if the honorable Commissioner will back him. We spent much of one afternoon in a conference with Chief Young Whirlwind, Rising Elk, and Medicine Crazy over the proposition to ask Congress to permit the Indians to use part of their reserve money in Washington for the purpose of erecting a house and barn upon their allotments, to fence the same, to break up some of the land for seed planting, etc. The proposition meets the approval of the Indian Office. We advised them to go to their people and discuss the plan fully and carefully, and then to meet in conference and act understandingly. If they decided to do it, to draw a petition to Congress to grant their request. As I have already said, Captain Woodson is exceedingly anxious to get them upon their allotments, and working the same. He thinks this method, if adopted, and he is left to carry it out, will accomplish the object. Here is their reply:

Chief YOUNG WHIRLWIND. I want to say a few words. From what you say I am led to believe that the idea of using part of our money originated in the Department at Washington. I have been to Washington twice. Before this house was built years ago, the Great Father told me it would be built, and that it would be the place where the big men would come to talk to us.

You are an old man and full grown, and I believe you are honest in all you say. This is not the first time I have talked with big men; for many councils have been held here, and I have always been one of the chief spokesmen. I have been a leader ever since I was a young man in things of this kind.

I have never taken my shares of money due from the sale of our surplus lands. I was ashamed, and that is the reason why I did not take it as the others have done. A few of the chiefs and head men sold the surplus lands of our reservation, and I opposed it. It was my intention to have all assemble in council and discuss the question of sale of the surplus land; but a few sold it, and it looks to me as though thieves had stolen it.

I see that what I say is being written. I like to see that, and hope my words go back with you to Washington. When I was in Washington I told the Great Father that I would be ready to talk about allotments in severalty and the disposal of the surplus land two or three years before our treaty expired. Three years of the treaty now remain. They should have waited until now to sell the land and make the allotments.

I am getting old and am almost unable to labor for my own subsistence. I have made up my mind to take the good advice of my agent, Captain Woodson, and ask Congress to allow the use of a portion of our money for the purpose of improving our allotments. I have asked Captain Woodson to send for all the money that is due me from the sale of our reservation. I want to see how much it is. I want to look at it, and then I will turn it over to Captain Woodson to keep for me. I hope it will come soon.

I know how to reason. I do not tell the white men what is not true. I have spoken for myself in regard to asking Congress to divert our permanent fund for improvements on our allotments. The Cheyennes will hold a great council. They will talk this matter over among themselves and make their decision.

I am glad that I am here to meet you. I am not at the agency very often. I live out on the Ouchita River. The reason why I asked for my money is, I want no bad white men to spend it for me. Each Indian now has to look out for himself and care for what he has. When the Indians drew their first big money they passed my tepee driving big teams and new wagons and buggies, and threw the dust in my eyes. But I could not say a word, because I did not draw my money and had no right to. At that time I determined not to draw my money until I saw how the other Indians came out with their fine horses and carriages. I don't know how they will all come out, but I do not see many big horses and new carriages now.

I want to tell you of one thing I do not like and do not want. When the agreement was made for the sale of our surplus lands the commissioners told us that twenty-five years would elapse before our allotments would be subject to taxation, and it is my understanding that all our personal property received from the Government is exempt. Now, the white men come and ask me how many ponies I have. They want to know all about my land and plows and such things, and they want to compel me to pay a tax on it. I do not think they ought to be allowed to do this, and I do not think that they can tax us until after twenty-five years.

RISING ELK. I was glad to hear Whirlwind say he was talking for himself. I did not take the shares due me from the sale of surplus lands, either. I have heard the Cheyennes at Cantonment say that they were not ready to vote on the question of diverting the permanent fund until after they have had their big council. As for myself, I do not want to do it. I want to see what kind of a house the Government builds for Whirlwind, and then I will make up my mind what to do.

In case I want a house, there is a large sum of money due me from the sale of our lands, and I can build one. I am not a child, and am not afraid to talk. Still, all I can say will not influence the Cantonment majority.

MEDICINE CRAZY. I came down from Cantonment, but not to talk. I did not expect to meet a man from Washington. The words of Young Whirlwind and Rising Elk have set me to thinking. I have heard at Cantonment of this matter of using a part of our money to improve our allotments. The dog soldiers have not said they would favor it or not. They are in the minority.

I want to have every one of the Indians speak for themselves on this subject, and become satisfied and know what will be done. These dog soldiers have just stopped on the road, and are undetermined whether to take the white man's way or not. We will hold a big council and decide whether to ask Congress to allow the use of a part of our money for the improvement of our allotments in the way mentioned.

Third, as to schools. I have visited a large number, and, as a whole, am able to report encouragingly.

Heretofore, in visiting them, I have found many absentees. This trip there were practically none. The schools were full, hardly any absentees, and scarce any sick. I have been in schools where many were absent, where there were runaways, where there were several who were seriously sick, but this trip all was brighter, and more contentment existed. The superintendents and teachers were hard at work, and intelligently so. Where I visited there had been few changes in the corps of workers. My experiences, as a whole, were encouraging. I am sorry not to be able to give a fuller report.

ADDRESS BY REV. DR. JAMES M. KING.

These reports of progress toward civilization among the different tribes of Indians in this country have delighted me. My heart has gone out toward them all. My personal experience among the Indians has been confined to a single tribe, and that tribe has not been referred to here. It is a tribe that can only be civilized by being exterminated. It is the most perfect illustration extant of the principles involved in the United States Government's theory of dealing with the Indians. This tribe has for a long time held undisputed sway over a rich "reservation" and has been supported and drawing rich rations without any returns of toil or payment of taxes. This is the Tammany tribe on Manhattan Island. Thank God, the time seems to be near at hand when the white settlers and sovereigns so long subject to the Tammany sachems, and whose ancestors have been robbed and scalped by these immigrant savages, are about to rebel, and, asserting their rights to "life, liberty, and the pursuit of happiness," destroy the "reservation" system, and, in accord with the recent practice of the General Government in appointing army officers as Indian agents, place a military man over the Tammany tribe in the person of Col. William L. Strong. The dangerous element of control in this tribe is the same as that which has disturbed the peace in other tribes, namely, a political ecclesiasticism.

God has so constituted affairs in this country and so bound the people together that he does not allow the United States to solve any problem unless its solution takes in the weal of all the people. There are but 250,000 Indians left in this country, but every principle involved in efforts for their civilization touches the fundamental governmental principles underlying the well-being of 65,000,000.

The past general policy of treatment of the Indian has been that of isolation or separation from the ordinary civilizing influences existing throughout other portions of the country. We have called him the "ward" of the nation, and in the very name has been conceded the secret of our failure in attempting to civilize and assimilate him. One proof that our people are learning some of the primary lessons of republicanism and Christianity is the disuse of the word "ward" in discussing the Indian problem. It is to be hoped in this matter that, in the language of the politicians on the night of election day, "the last ward has been heard from."

We have been slow to learn, but we are learning the lesson that like causes produce like effects in this problem as in all others. If we are to fit the Indian for citizenship we must use the same appliances that we use in fitting other races for citizenship. The common school is the great leveler and molder of youth in preparing them for the duties of sovereigns in the Republic. Years ago this conference expressed its conviction in favor of the extension among the Indians of the common-school system, and in favor of the gradual withdrawal of governmental aid to sectarian schools, and since that time great progress has been made in carrying out this common-sense American policy, and now opposition to it has either substantially ceased or become so exceptional as to make it conspicuous by its isolation.

Since the principle of treating the Indians as though we expected to make citizens of them has taken root in the minds of the lawmaker, the humanitarian, the patriot, and the Christian, the question of appropriations of national funds for sectarian education among them has assumed vital importance, because it injected another experiment into the problem and put a premium on rivalry which amounted to contention between different systems of ecclesiasticism, which is never a winning or conquering spectacle in the presence of Paganism.

While the members of the National League for the Protection of American Institutions, which I am permitted to represent, have been interested in all the factors

entering into the solution of the Indian problem, they have been especially active in attempting to put an end to the dangerous experiment in essential union of church and state at the treasury point involved in sectarian appropriations of national funds for Indian education, and they have approached all of the religious denominations involved impartially and in the same spirit.

When the league was organized in 1889 the great bodies of religious people represented by the Methodists, Episcopalians, Congregationalists, Presbyterians, Lutherans, Mennonites, Friends, Roman Catholics, and others were receiving yearly from the United States Government large sums of money for sectarian work among the Indians. In many States and municipalities grants of large sums of money were yearly made to private charitable institutions.

The evils resulting from such grants were manifold, and were widely felt. During the past five years a right public sentiment has been formed on this important matter. The principles involved have become a living issue with the public, and they demand a settlement. They have been the theme of thousands of sermons, addresses, discussions, newspaper and magazine articles, many of which have entered into permanent literature. The tone of discussion which has resulted shows that there is a gradual approach to public agreement as to the harmfulness of the practice of appropriating public money to sectarian institutions, or, indeed, to private institutions of any kind. There is a growing conviction of the necessity of prohibiting such grants by constitutional enactment.

After five years of educational and aggressive work on the matter of sectarian appropriations by the National Government for Indian education, the National League has secured the indorsement of its proposed form of XVI amendment to the United States Constitution by the highest representative bodies of the Protestant Episcopal, Methodist Episcopal, Methodist Episcopal South, Baptist, Presbyterian, United Presbyterian, and Congregational Churches. It has secured the withdrawal from consent to receive appropriations by Congress for sectarian Indian education of the Protestant Episcopal, Presbyterian, Methodist Episcopal, Congregational, and Unitarian Churches.

It has secured the following action on the part of the United States Senate, which promises a speedy settlement of this important question:

"Provided, That the Secretary of the Interior is hereby directed to inquire into and investigate the propriety of discontinuing contract schools, and whether, in his judgment, the same can be done without detriment to the education of the Indian children; and that he submit to Congress at the next session the result of such investigation, including an estimate of the additional cost, if any, of substituting Government schools for contract schools, together with such recommendations as he may deem proper."

Since this action was taken the Interior Department has announced its settled policy to be the discontinuance as speedily as possible of all aid to sectarian contract schools.

Twenty-five States now contain constitutional prohibitions against a division of the common-school fund, and most of them against sectarian appropriations. Seventeen of these States have either adopted or reaffirmed such amendments to their organic law since the movement for an amendment to the United States Constitution was initiated. In the State of New York, after a spirited campaign, a great and decisive victory has been won in the constitutional convention by the adoption of the following amendment on the school question:

*"Neither the State nor any subdivision thereof shall use its property or credit or any public money, or authorize or permit either to be used, directly or indirectly, in aid or maintenance, other than for examination or inspection, of any school or institution of learning wholly or in part under the control or direction of any religious denomination, or in which any denominational tenet or doctrine is taught."*¹

It is a notable historic fact that, while President Grant, with best intent, called upon the different religious denominations to aid the Government in civilizing the Indians by Christianizing them, and thus initiated the practice of sectarian appropriations by the National Government, he also proposed by message an amendment to the United States Constitution similar to the XVI amendment advocated by the National League. This amendment was introduced by the Hon. James G. Blaine in the House of Representatives on December 14, 1875, was approved by the extraordinary vote of 180 ayes to 7 noes, but was lost in the Senate by 28 ayes to 16 noes—lacking the requisite majority of two-thirds. Thus, while President Grant was the author of a policy which, however helpful for a period, contained hidden elements of peril he also initiated a movement which was destined permanently to avert the peril when it appeared.

One of the most magnificent spectacles in modern history is the action taken against sectarian appropriations, and for essential separation of church and state,

¹ This amendment was ratified by the people on November 6, 1894.

by the highest representative bodies of the great Protestant denominations, representing a membership of nearly eight millions and a constituency of fully thirty millions of our people. Most of these churches were drawing funds from the United States Treasury. The Baptist Church, it is but justice to say, has never received grants from the National Treasury to aid it in its work among the Indians.

The National League has made the same appeals to the authorities of the Roman Catholic Church, including the bureau of Catholic Indian Missions, the meeting of the archbishops, and the papal legate Satolli, as it has made to the other churches, asking the withdrawal of this church from the receipt of national funds for its sectarian work among the Indians; but up to the present time no favorable response has been received and no favorable action has been taken. This church now stands almost alone in its relation of pensioner on the National Treasury. It can not be doubted that Congress will not long venture to make appropriations from the taxes of the people to a single church, as that would constitute the direct union of a church with the state; and on this subject the American people have convictions that law-makers will not trifle with.

I believe that the simple fact of the churches being called upon to supplement and make up the deficiencies caused by the withdrawal from the use of the funds of the Government is one of the best things that has happened to the churches of this country. It is a separation based on self-respect. I want to say that, as a general principle, and as the result of my study of many years, the inevitable tendency of an appropriation from national, state, county, or municipal treasuries is to stunt the benevolence of the people.

Let the National Government make ample provision for the industrial and civil education of the Indians, and keep sacred its treaties, and let the churches carry the gospel of Christ to them the same as they do to other races of men, and let each honestly pay their own bills, and the result must be that the original Americans will become civilized and Christianized Americans, and the Indian problem will be solved.

Is not the time ripe for the Mohonk Conference, which has so often determined the policy of governmental authorities on the Indian question, to put on record its belief that hereafter the churches should do their own work among the Indians at their own expense, and that the National Government should no longer pay money out of the National Treasury for the support of sectarian contract schools?

The following resolution was offered by Rev. Dr. Lippincott, of Philadelphia, and, according to the rules, was referred to the business committee:

"In view of the fact that steps have already been taken to inquire into the relation of the Government to the so-called contract schools among the Indians; and in view of the further fact that many of the leading churches of the country have, in their highest governing bodies, taken a position hostile to the receiving of public money for their own schools,

Resolved, That, in our judgment, no public money ought under any circumstances to be voted for the support of schools of any grade which are not owned and controlled by the Government itself."

Dr. LEMUEL MORSE. Reference has been made to the peace policy of General Grant. I think it pertinent to the matter before us, as well as to the general subject, to say that in quite a conversation with him after he became President of the United States he made a remark that has been recalled a good many times during these debates. He said: "I do not expect to accomplish very much in carrying out this peace policy, but I do expect to secure this—that the public mind shall be so acquainted with new possibilities in regard to the care of the Indians that they will never be willing to go entirely back to the old chaotic arrangement." I am sure this conference is an abundant witness to the foresight of his remark as well as the wisdom of his suggestion. I have the honor to belong to that denomination to which Dr. King has so kindly referred as never having had its hands in the public Treasury in the matter of Indian education. We are doing something among the Indians, and we are paying our own bills, and I hope we shall do still more when we are relieved from the burden of taxation to carry on the work of other denominations.

Bishop Walker, of Dakota, was next introduced.

Bishop WALKER. I have had a sad heart since I came here, because I have thought there was little sympathy with the Indians. We have talked so much about making them conform to the white man's ways. I believe in progress. I believe in doing everything we can to advance this people, in using every means that is kindly in pushing them forward. But there is such a thing as being hard to a people who are young—people who do not know what this progress that you are proposing for them is. When I heard this proposition—that they should be submitted to white man's laws and white man's courts—I felt sad, because, if you submit them to the white man's laws as they stand to-day, and as the law stands in many parts of the West, you will find that the Indian will be ground to powder. You will say that I am a retrogressive man, and belong to the old régime. I am not. I want to see

things go forward, but I want to see that sympathy, that pity, that love, which the Saviour of the world brought down, shown toward this people. I feel that we are to bear with them, and not use hard measures to compel them to conform to our ways. I am afraid there is not as much sympathy with these views as I think there should be. I would give them the protection of the law; but I would not put them where they will be burdened with three times as much taxes as the white man, who is their neighbor. In some parts of the West a nonresident is taxed two or three times as much as the man who is on the soil. If an Indian becomes a nonresident, I do not know what he can do for his protection. White men would impose on him burdens; and, if that is going to be the result, the Indian will be a very unhappy man.

Only three weeks ago I was on an Indian reservation, and, going up and down, I saw things that made me sick. It was a reservation where it was claimed that great advance had been made. Twelve hundred men, women, and children had taken up their allotments, almost to a man. The cost of carrying on that reservation—the agent's salary, the service, the farmer, and the like—is something like \$4,500 a year. I found eighty families who to-day have nothing at all in their lodges to eat. These were men who had been working during this season and last. They had planted their wheat, done their best, but there was no crop; and, as a result, they are starving. I went from lodge to lodge, and they have no food. They are children yet, and they need to be helped along. They can not be thrown into the water and compelled to swim. If they attempt it, many will sink. I came upon one wigwam where sixteen women were gathered. Fifteen of them had been invited by the sixteenth because she had something to eat. I saw the great pot in the center of the group. It had in it a brown, ugly mixture, and I found it was flour, mixed with water and choke cherries pounded up, with the pits left in to "fill up." You remember the story of the woman in Scripture who had a little meal and a little cruse of oil; and she baked a cake for herself and child, that they might eat it and die. That seemed to me to be the condition of this people. They told me they did not know where the next meal would come from; and some of these women had babies in their arms. I feel that Christian people ought to put their hands into their pockets and help them. Wherever we know there is suffering, we ought to help it if we can. I am a missionary bishop, and the missionary bishop is generally in the begging attitude. Some years ago I was at Trinity College, of Oxford, and in the campus I saw the statue of a bishop in his robes, and his right hand was uplifted, as if in benediction. I asked whom it represented; and, in answering, I was told the story of a layman who saw the statue and asked, as I had done, whom it represented, and they told him Bishop Brownell. "Oh," said he, "evidently not a missionary bishop." "Why do you say so?" they questioned. "Because," said he, "a missionary bishop would not have his hands so. He would have them both open and stretched out." Again I stretch out both of mine in behalf of these people.

No collection was taken up, but Mr. Smiley placed his hat upon the table, and left it there for free offerings at the close of the session; and several hundred dollars were given in this way for the starving Indians of whom Bishop Walker had spoken.

Professor PAINTER. This condition of want may be found all over the country. In one region I passed through a field of 50 acres, where there would not be 2 bushels to the acre. It is absolute want for both white people and Indians. The whites will be taken care of in some way, but there must be pressure upon Congress for immediate relief for these Indians.

Gen. C. H. HOWARD. There are no funds available without an appropriation from Congress. That will not meet before December, and the people can not wait till then.

The following letter was submitted by Gen. C. H. Howard:

Gen. C. H. HOWARD:

MY DEAR SIR: Your remark to me the other day calls to my mind the very enjoyable meeting I had with the Indian workers at Lake Mohonk two years ago; and it occurs to me that possibly, as the friends of the Indians meet again, it may not be uninteresting to them to know of our Indian.

You will remember that we offered, when there, to educate one Indian free; that is, give him board and tuition the same as would be furnished other cadets at \$450. The proposition was turned over to a committee; but, as they never acted in the matter, we took upon ourselves the responsibility of doing it last year. After some little investigation and correspondence we accepted an Indian from the Puyallup Agency school near Tacoma, by the name of Archie Isaac. His mother is a full-blooded Skohomish; his father, a half-blooded Squaxon. He is about 17 years of age, and entered our sophomore class one year ago. At the end of the year he bore off the scholarship prize, costing \$25. We do not mean by that that he was highest in the school in attainments, but the prize was for best grade of work done. His studies were geometry, natural philosophy, rhetoric, and Latin, including reading

and spelling as daily exercises. His average for the year was 95½; and, as fourteen other cadets stood above 90, we think it nothing derogatory to their credit that Isaac came in ahead. He is to remain here two years longer, when he will be ready for the Latin scientific course in Dartmouth College. We have secured to him a four years' scholarship free there, which also includes his board. It is a condition (which, of course, we can not enforce) that, when through with his studies, he is to return to his own people either as a lawyer, doctor, or teacher, including the ministry. He has decided on the law.

We regard him as a very promising young man, quiet, straightforward in every respect.

Wishing you a very pleasant trip and visit to this year's conference, I remain,

Respectfully, yours,

H. P. DAVIDSON, *President.*

NORTHWESTERN MILITARY ACADEMY, ILL.

Dr. T. A. Nelson was invited to speak in behalf of the Presbyterian Church.

Dr. T. A. Nelson, as representing the work of the Presbyterian Church, after indulging in some pleasantries, went on to say: It may be a matter of surprise to the members of this conference, yet it is also matter of fact, that the work of the Presbyterian Church among the Indian tribes equals that of nearly all the other Protestant denominations combined. It has been quietly, but most earnestly, prosecuted for years, and extends over a large area. Beginning at Point Barrow, the most northerly missionary station in the world, it extends southward among our American Indians, and reaches its southern limit among the Indians of New Mexico and Arizona; while eastward it embraces work done among the tribes in the Cattaraugus Reservation in the State of New York.

The patience, self-denial, courage, and heroism which this work represents can only be appreciated by those who have familiarized themselves with the history of Christian missions among the Indians. It requires the zeal of an apostle to bury one's self, as our Mr. Stevenson has done, amid snow and ice, on the northern frontier of Alaska, where communication from the civilized world can only reach him once a year, and where, unaided save of God, he has set himself to the task of lifting the dull and sodden weight of heathen ignorance and superstition into the light and hope of Christian intelligence. Further south Mr. Gambell, of the St. Lawrence Island Mission, is displaying a like heroism. Some years since this island was swept by famine, till all missionary endeavor had to be abandoned. Recently the old mission station was offered to our board, provided we could find a man with sufficient courage to face the hardship of the field. We found not only a man, but a woman as well, his noble wife, ready to go into this veritable exile, that they might carry thither the story of the love of God.

They sailed for their destination, carrying their supply of provisions with them. But the whaling ship in which they had taken passage refused to land them at the island, and carried them and their supplies on to Port Clarence. They can not have their food supplies carried back and delivered till many months have passed. Meanwhile they have determined to find their way to the island, and subsist on fish and blubber, and such other diet as the natives feed upon. This is the kind of heroism in Indian work which has been and is being duplicated over and over again.

One can not go into detail in describing the work being done by our board among the various tribes in the Indian Territory, in Minnesota, in South Dakota, in Iowa, Montana, Idaho, Arizona, and New Mexico, in all of which, as a church, we are doing what we can to lift the Indians into the dignity and intelligence of a Christian manhood. Through our industrial schools we are educating our Indian boys and girls in such a variety of handicraft as will stimulate the ambition for self-support. We are putting within their reach the elements of helpful knowledge; but, above and beyond all things else, we are seeking their renewal of heart, and striving to bring them into loyal relation, not to the Presbyterian Church, but to the Christ whose we are and whom we serve.

The prostration of our industries throughout the land during the past year or more has resulted in diminishing the gifts to our boards, and we have felt the pressure not a little. Add to this fact our relinquishment of all Government aid in support of our Indian schools, a factor of some \$30,000 or more, and you will perceive that the noble women of our church almost wholly responsible for the support of our Indian work, have had occasion for serious thought and a new consecration of energy. But nothing seems to daunt them, and they have faced these heavier responsibilities with an unwearied zeal and with a boundless faith. A few, a very few, of our weakest schools have been temporarily closed, the attendance at Tucson, Sisseton, and Sitka, slightly curtailed; but even these changes have been compensated for by the new emphasis put upon higher education in such schools as those at the Sisseton Agency and Muskogee, where we are seeking to educate native teachers for work among their tribes. The school at Muskogee, so pleasantly associated with the name and work of Miss Alice Robertson, has been erected into an institution to

be known hereafter as "Henry Kendall College," a tribute to the memory of the Rev. Dr. Henry Kendall, long the senior secretary of our Board of Home Missions, and the grateful remembrance of whose splendid service the Presbyterian Church can never outlive.

This conference may count upon the hearty sympathy and cooperation of the Presbyterian Church in every aggressive movement that has for its aim the establishment of the Indian in all the rights of American citizenship, and in all the dignity and freedom of a redeemed manhood.

Mrs. QUINTON. The Baptists have 1,100 teachers and missionaries at work, 35 of them in Indian service. Most of these are in the Indian Territory. They have built several new churches and chapels, and are making progress on all lines. They are greatly interested in Oklahoma, and have several new missions.

I am also to speak of our Woman's Indian Association's missionary work. Several of our missions have been transferred. The one among the Piegans of Montana, with its 160 acres of land, its new missionary cottage and chapel, and all the furnishings, has been transferred to the Methodist Episcopal Board of New York. It cost over \$4,000. It is one of the functions of our association thus to do pioneer work and establish missions in otherwise unprovided Indian tribes, and we think the plan a generous one. Our only motive in this department of labor is to establish a good mission in every destitute tribe, and then transfer it to one of the great denominational societies. The new mission of our Massachusetts auxiliary has been reported by Miss Dewey, secretary of that society. There are other officers from our different State associations here. The Spokanes of Washington have long pleaded for a school and mission, and our Rhode Island association has just opened one among them. We have, in this conference, heard the cry of the literally starving, and it is agonizing to see starvation in the midst of shiploads of bread. But Indians are also starving spiritually, and in the midst of 60,000,000 Christians. Every tribe of Indians should have a good mission before the year 1900 strikes, and we are trying to help find supplies for this work. Our Seminole mission in Florida was given, as planned, to the Episcopal Church of southern Florida last Christmas. Our State missions are all prospering, and our day school at Greenville, Cal., has become a boarding school, with 80 pupils.

As to work, we have always believed that the Indian should finally be left to "sink or swim," and we recognize that the day is near when he must try this; but the rocks of needless difficulties should not be dropped upon him as he struggles with the waves. We believe he should be protected to a certain extent, but we do not believe in too much paternalism. We do believe in the suggestions of Mr. Austin Abbott regarding courts and laws, and that the Department of Justice could finish the needed work not otherwise provided for. One speaker said it was necessary to police Alaska. We think that Congress should be policed, morally. It is necessary to do that, and Christian voters can do it. The Mohonk Conference can do it. Voters must look after good agents, for good agents are the vital interest. Voters can demand the nomination of such agents as the Christian public requires. Mohonk can do a vast deal for this, for it touches the leading Christian editors and others who could accomplish this. One name illustrates the vast moral power which such a body as this could use; it is Parkhurst! Eight or ten years should finish this Indian work. Why drag it over thirty? It is true that the Indian needs work, orders for work, and markets for his work; and he needs education. But it is "the man inside the Indian," as Dr. Rider said, who needs the most and best, and that is moral and spiritual help. With this he can bear all the new dangers of his new liberty and citizenship; and with this he will succeed, for "to know God is eternal life," and eternal life begins now and here.

Mrs. Clinton B. Fisk was asked to speak about the work of the Methodists.

Mrs. FISK. You will remember that last fall the Methodist Church seemed to be under a ban of censure because of the suspension of the Woman's Home Missionary work in Unalaska, and I was desired to ascertain the real condition of things. In less than a month after that time the Methodist women honored me with the presidency of their society, and my first duty was to go to Minneapolis to confer with the board of bishops, asking their permission to go on with the Unalaska School. I there learned that the cause of suspension was because of the opinion that we had never had permission to enter upon the work. We carry on our work in harmony with our general missionary committee. Dr. Sheldon Jackson had, however, found a letter, written ten years ago, authorizing the women of the Home Missionary Society to enter on this work, and my own good husband, whose voice has so often been heard here, was chairman of the committee. The letter was read, and a resolution was offered by the bishop, who had objected to reopening the school. A rising vote was taken, and general consent was given for the women to again take up the school. We now have the school under our care. Government supplies the schoolhouse and we support the children. The women of the Methodist Church are doing a magnificent work, and so are the women of other denominations. As I

was sitting here a few moments since I counted women from seven different denominations, and I wondered to which one I belonged, because I am in full sympathy with each.

I have in my hand a letter from a missionary from which I wish to read an extract. It commends the work of Mr. and Mrs. Tuck, who are in charge of the Unalaska School. From that school have gone out two of our girls who have married, and who now have, I am told by missionaries, the only respectable homes within that community, outside of the school:

UNALASKA, *June 20, 1894.*

DEAR MADAM: I have been in Unalaska for several days, and have spent my time at your school. I thought it might be interesting to you to hear the impression of a stranger concerning it.

I am just on the way up the Yukon to begin just such a school under the Rev. John W. Chapman of the Episcopal Church, of whom you may have heard; and so I have been especially interested in it myself, and have taken pains to learn all the details of the work. And it gives me new courage to see what wonderful results may be accomplished by patient, faithful work in Christian faith. Mr. and Mrs. Tuck, under the great disadvantages of crowded quarters, and, I should judge, limited means, very great opposition, the influence of the Greek Church, and the terrible immorality of the natives, and so many incoming sailors—how they have stood their ground and accomplished the results they have is wonderful.

I was there twelve hours yesterday, and a good part of the day before, as well as of Sunday, and saw the girls at work, at play, at meals, in school, and at worship. A happier, more contented, more harmonious set I never saw. There was no quarreling anywhere, and each did her own share of work, like a hive of busy bees. They laugh and play and sing and bustle about, bright and happy and natural, and yet as orderly as one would find anywhere.

The discipline is excellent without depressing them, and if the babel of voices gets too high, a tap of the bell or a word is sufficient to bring quiet. They stand well in reading with girls in any public schools anywhere, and write well; and yet these girls were wild untaught Indians, or half-breeds, speaking only their own language, and dirty beyond conception, and unused to any civilized habits. I wish you could see the neat rooms, clean floors, wash hanging on the line, ironed aprons and dresses, nicely made beds, dresses they themselves had made—all the work of these girls, even the tiny ones taking part as far as they are able; and the lunch and dinners, with excellent bread, was entirely their own doing, etc.

I am glad to tell you of Mrs. Tuck's work, and I wish she could have many interested in it as well. It is saving these girls from a most horrible degradation, such as one shudders even to know of; and every Christian woman who values her sacred womanhood ought to feel it a privilege to do any, even a small part, in helping to keep them out of it, and to save them not only to do their work in the world and make it so much the better, but for eternal life.

I remain, yours, sincerely,

BERTHA W. SABINE.

Mrs. H. M. TELLER.

Mrs. Myra Frye, of Maine, was asked to speak of the work of the Friends.

Mrs. MYRA FRYE. Our work is largely in the Indian Territory, in the northeast corner, among the eight remnants of tribes. We have also two missions in the Cherokee country and a large boarding school among the Osages. Among the wilder tribes in Oklahoma we have three missions. The most of the missions are doing very well. In 1887 I visited the Modocs. One of the fighters in that war, Steamboat Frank, had been converted, and was very desirous to learn to read the Bible. He afterwards came to Maine, and I had a little care of him during his last years of failing health, for he was in consumption when he reached us. He spent his last three weeks in my home, and I was never in the presence of a more gentlemanly person. He was a thorough Christian, and I have said in my heart again and again how much Christ can do for anyone who believes in him. If we want to give civilization to the Indians, we must give them the power that makes us to be civilized, and helps us to stand. If we build on the right foundation, we shall save our Indians. It is a grand work.

Mrs. S. H. Bullard, of Boston, was asked to report for the work that Unitarians are doing among the Indians. She was introduced not only as the president of the Massachusetts Indian Association, but as the sister of President Eliot, of Harvard University.

Mrs. BULLARD. Your introduction, Mr. President, is in all ways the kindest that you could possibly give me. I speak here of a contract school which will be obliged to remain a contract school during the present business depression. Our smaller churches have reduced their gifts this year, and our larger churches have not increased their contributions. Should we reject Government aid, our instruction must suffer. Our contract obliged us to furnish teaching in carpentry, farming, blacksmithing,

washing, cooking, and other housework, besides the school instruction; and, when we are able to obtain a kindergartner, we have her assistance with the younger children. All of these departments require a large force of teachers. Our school is administered in the usual way. It has but one peculiarity worth mentioning. We have, from the beginning, required that all our teachers and all the persons employed in our various departments shall sit at table with our Indian children, and that each one shall be responsible for the behavior and table manners of a certain number of children. Many visitors have commended this arrangement, and have thought that it brought our children forward in the social life which we desire for them faster than any other system. Others have thought that it was too great a demand upon our teachers. Our children are like so many other Indian pupils, affectionate, intelligent, and docile. They win the love of all their teachers. General Marshall, who, I am sure, is not forgotten in this conference, had much to do with the founding and carrying on of this school. He visited it, and was much charmed with these little Crow children.

There is much objection to the contract schools on the ground that they are sectarian. In this school we are not trying to make the children Unitarians. We are trying to rescue them from the surrounding degradation which I could not exaggerate to you. We teach them their little morning and evening hymns. We teach them to pray, and we give them their Sunday lessons such as you give to your children in your own homes. What we are trying to do is to make them Christians.

Adjourned at 1.15 p. m.

MISS CORNELIUS AS A NURSE.

The following extract from a letter to the president of the Connecticut Indian Association is the one referred to on page —:

"I wish that anyone who still believes that the 'only good Indian is a dead Indian' could have been here the last nine weeks and seen your dear Miss C. by the bedside of my suffering sister. She has lain at the point of death with heart disease; and such loving, faithful, intelligent care as this Indian girl has given I have never seen equaled. She has endeared herself to all our hearts, and I often tell her that I wish every Indian girl in the West could become a trained nurse. And with such 'object lessons' in our homes the Indian problem would be solved. Words fail me when I attempt to tell what Miss C. has been to us all. Clear-headed, equal to every emergency, keen-eyed, a true Christian, scorning all deceit, knowing no fatigue till all duty is done—this is what she is—no! I can not tell all she is. I wanted to write this to you who bear this race so upon your heart, and hereafter I trust I may, in some small way, help on a cause which will ever be first in my heart and prayers."

SIXTH SESSION.

FRIDAY NIGHT, *October 12.*

The conference was called to order by the president at 8 o'clock.

President GATES. We have never held a conference where there has been so few teachers with us from the Indian schools. The teachers' institutes in the West have brought the teachers together at points nearer the field, and that is one of the reasons why so few have found their way to this conference. Many of us, however, will always remember with delight the appearance here of such workers as Dr. Riggs and his wife, and Miss Robertson, and others. A letter has come from Miss Robertson to Miss Dawes, in which she sends greeting. All those who would like to have Miss Dawes convey to Miss Robertson our greetings in return will say "aye."

A chorus of "ayes" was the response.

President GATES. Let us not forget these teachers. Here is a side light on the kind of work they are doing. The Indian women of South Dakota, in the diocese of Bishop Hare, last year contributed \$2,000 to missions. That does not look as though we were contributing too much.

We can not always pause to take note of those who have worked with us and passed on to the larger freedom and richer life beyond the river. If we were to speak especially of each of our friends who pass away, we should perhaps give too much attention to the past, and at these meetings our hearts would be too grievously saddened by thoughts of our loss. Yet, when one connected with so many reforms as was Elbert B. Monroe, president of the trustees of the great school at Hampton, interested in the work of the American Missionary Association and chairman of the executive committee, and a member of the Board of Indian Commissioners—one who made it evident that he held his powers and wealth in trust for service, one all whose interests were shared by the wife whose life blended with his in a perfect dual life,

unified by entire devotion to unselfish service of others—when such a one passes away we must pause to recall his example with love and with a keen sense of our loss. Mr. Monroe has passed away from us since our last meeting, and we can not forbear a word of loving tribute. There are other names that come to us in memory, names of friends often with us at these conferences, tried friends of the Indians—Mr. Barstow, of Providence, a member of the Board of Indian Commissioners, once its chairman, long and honorably identified with the best efforts to Christianize the Indians, and others to whom I may not now refer. Time presses, and we have still work to do, such work as they would bid us turn to rather than dwell too regretfully upon their memory.

And first let me introduce to you President Magill, formerly of Swarthmore College.

PRESIDENT MAGILL. I have looked back, as I have been sitting here, over the ten years that have elapsed since I appeared in these conferences. I remember how with bated breath we dared even to mention such a thing as the violation of an Indian treaty. I remember how some of us were frightened at the thought of breaking up these little nations inside of this great nation. A little later we listened to Senator Dawes's eloquent statement, that has now passed into a law; and, now that I come back here after an absence of three or four years, what do I find? I hear propositions to sweep away the entire reservation system. I hear all kinds of schemes for uplifting the Indians, discussions maintained in the best of spirit and for the best of reasons. We have here represented nearly all of the religious denominations of this country; and, while they differ in detail, in minutia, they are so alike in spirit that the wife of our lamented president of this conference says that, though she can count seven denominations here represented, she is so in sympathy with all that she hardly knows to which she belongs. That is the right spirit. We all agree on the fundamentals of religion. We all agree on those points which bear on daily life and conduct, which are the fundamental essentials, after all. So this body, differing in details, agrees in the main principles. The object of us all is to lift up the Indian to the high level of Christian manhood and womanhood. We differ only as to methods. I represent one branch of Friends, sometimes called the Hicksite branch. I wish we could point to a better record of what we have done. Feeling that we are not doing all that we ought to do, I was asked this summer to present to our general biennial conference the present duty of Friends toward the Indian race. I tried there to emphasize two points; one was that, disregarding all religious affiliations, we should do what we could toward securing the right kind of legislation for the Indian, and urged that there was no way to do this so effectually as by joining the National Indian Rights Association, of which Herbert Welsh, the honored secretary, and the president, Mr. Garrett, are here present with us, actively engaged in this conference.

But what can we do in our own body? I said that we ought by all means to establish a boarding school for Indian children, to teach them not only letters but industries, and to give them moral and religious training; that we should present to the Indian our beautiful and simple system of religion. It is easily understood, and it bears on all the points of his daily life and conduct and on the formation of his character. But I am here not to give instruction but to get inspiration, and I have received a great deal in the sessions of this conference and in private conversation with the different members. I have since coming here changed my mind as to what our Indian school should be and where it should be established. I at first supposed that the place of all others was among the Navajoes, where there are 3,000 children, with 190 in school. I believed that it was our duty to start there; I have heard that course suggested. Since I have come here I have gradually changed my mind, and I now believe that the sweeping away of the entire reservation system is in the near future, and that we should exercise all our influence to educate and direct the Indian away from the reservation and to lift him up and prepare him for citizenship, and not send him back as a missionary unless he is moved to go. By all means, then, let him go, if he is led to that work; but let him go wherever he will, just as other citizens do. I have decided, therefore, to recommend the establishment of our school somewhere in the East, and not in the West; or, if in the West, then not on a reservation, but somewhere in the neighborhood of the Mississippi. While I believe that great good has been and is being done in other fields, I believe that now we should turn our attention especially to a school or schools established off the reservations.

DR. STRIEBY. A year ago I laid before you the facts in regard to the murder of our missionary at Cape Prince of Wales. I think you will be glad to know how the thing stands to-day, and, because some persons are here this year who were not here last year, I will briefly recount what went before. Cape Prince of Wales is a thousand miles beyond Sitka. It is the most western point of the United States. At that point was this little village of about 500 Eskimos. We had a mission there two years ago, consisting of two men and their wives. Very soon the Government asked us if we could not allow one of these men to go to the place where the reindeer herd was to be established, at Port Clarence; and we consented. The school had grown

wonderfully. Mr. Thornton and his wife were left there alone after the departure of the other missionary and his wife. He had been threatened with danger, but was not willing to leave. On the midnight of the 17th of August a rap was heard at his door; and supposing that someone had come to him for medicine, he rose and went to the door. There came a shot, and he fell, and never spoke again. His poor wife had to spend from midnight to daylight in the horror of that situation, with darkness all around, not knowing what moment a crash might come. In the morning she lifted her window and called for help. The people came; and the men said that they would do all that they could. They caught two of the three men engaged in the murder, brought them to the foot of the United States flag, and shot them on the spot. The third man, who was the instigator of the plot, escaped. Captain Healey, of the *Bear*, came along pretty soon after, and found no signal out. No one came to the shore to meet him. He sent to see what was the matter, and found Mr. Thornton lying dead, and a note from Mrs. Thornton saying that she was gone to Mr. Lopp's. He went there, and brought her back to look after her things, and then took her to San Francisco. She is now a woman sad at heart, broken in health and spirits.

Now, what has been the result? We asked Mr. Lopp if he would not return again to Cape Prince of Wales, and reestablish the school. He consented to do so. He returned; and what did he find? He found the building and the supplies and all as safe as they were the day Mrs. Thornton locked up and went away. He found that the leader of the murderers had come back, and had been taken by the people; and his own uncle said to him: "Which way will you die? Shall it be by shooting or hanging?" He chose to be shot. He led him to the grave, and told him to bow his head; and the uncle shot him. Mr. Lopp and his wife are there, opening the school under circumstances that seem to be as safe as here; and the school will go on. The deplorable thing is that we have not money to send teachers.

I know that this matter of the reindeer is a matter of life and death to the Eskimo. The whales and the seals and the walrus have been killed off. There was one time when there were seven hundred vessels that used to go into those waters. Now there are only about fifty, and there are very few animals left to kill. If they can have the reindeer, it will afford meat and milk and skins for clothing and beds and boats. The boats will be sewed with the sinews of the reindeer. They will furnish also the best means of transportation that that region affords. The herd at Port Clarence has passed the winter, which was one of unusual suffering; and there are now one hundred and fifty fawns. Mr. Lopp has taken his, and planted them there, so that, with the school established in safety, and with the reindeer, we expect a prosperous time.

PRESIDENT GATES. General Whittlesey has received a proof of the forthcoming report of the United States Commissioner of Indian Affairs. General Whittlesey suggests that he call attention to a few of the essential points in that report.

GENERAL WHITTLESEY. The following are the facts I wish to call attention to:

Current expenses for 1894	\$7, 396, 243. 82
Current expenses for 1895	6, 733, 003. 18
Difference in favor of 1895	663, 240. 64

SCHOOL ENROLLMENT.

"The aggregate enrollment for the year has been 21,451 pupils, and the average attendance 17,096, being a little over 79 per cent of the enrollment."

SCHOOL APPROPRIATIONS.

"As stated in my last annual report, my estimate for school appropriations for the current fiscal year were less by \$83,897 than the appropriation for the preceding year. Those estimates had been prepared with utmost care, and included only absolutely necessary items; and I said, 'In my opinion, any reduction in the amounts asked for will to just that extent reduce the efficiency of the service and retard its progress.' Congress, however, saw fit to reduce the appropriation below the estimate. I shall do what I can to carry on and improve the school service just so far as the appropriation will allow.

"Moreover, the ultimate end of 'absorbing' our small Indian population into our school system, as well as our civil polity, must be kept constantly in view, and every effort made, by pressure and persuasion, to increase the attendance of Indian pupils at public schools.

"Many cordial replies have been received, indicating a readiness on the part of the State school officials to cooperate with this office in putting Indian youth into public schools; and the matter will be pushed vigorously during the coming school year.

“Amounts set apart for education of Indians in schools under private control for the fiscal year 1895:

Roman Catholic	\$359, 215
Presbyterian	
Congregational	
Martinsburg, Pa.	
Alaska Training School	
Episcopal	7, 020
Friends	10, 020
Mennonite	3, 750
Middletown, Cal.	
Unitarian	5, 400
Lutheran, Wittenberg, Wis	15, 120
Methodist	
Mrs. L. H. Daggett	
Miss Howard	3, 000
Appropriation for Lincoln Institution	20, 040
Appropriation for Hampton Institute	33, 400
Woman's National Indian Association	4, 320
Point Iroquois, Mich	600
Total	461, 885

Last year, \$537,600; 20 per cent reduction from last year.

“Annual appropriations made by Government for the support of Indian schools:”

Year.	Amount.	Per cent increase.
1894.....	\$2, 243, 497	13.5
1895.....	2, 060, 695	18.87

¹Decrease.

The next subject in order was “How to secure good agents.” The first speaker was Mr. Herbert Welsh, of Philadelphia.

MR. WELSH. I think we all admit the great need of a good Indian agent. One of the most important topics, in my opinion, and one that has forced itself upon me by observation, is this that we are about to consider, “How to secure good agents.” For a time, at least, the Indian agent must continue to be a great factor in the solution of the Indian problem. At the agency at Pine Ridge and at Rosebud, respectively, you find 5,000 to 6,000 Indians under the care of an agent. It is manifest that in a community comparatively little advanced in civilization much will depend upon the character, upon the efficiency, and upon the manly qualifications of the agent. For example, at Rosebud, under a poor agent such as was appointed some twelve years ago, when I first visited that reservation, nothing was accomplished. The Indians lived herded together, camped in the central part of the reservation, spending their time in idleness, feasting, and dancing. Under the agent who succeeded the incumbent referred to—an earnest, reliable, Christian man—an immense advance was made in getting Indians to move out upon farming land. Everything moved forward. Under the operation of the spoils system, Major Wright, in the middle of his excellent work, was removed; and under the first Democratic Administration a very inferior man was put in his place. He spent most of his time in his office, took no interest whatever in the progress of the people, was surrounded by inefficient agency employees, and the work on Indian civilization went backward. Under his successor, young Mr. Wright, a gentleman of high character, great force, and vigor, a revolution has been wrought in the condition of this field. Enough by way of illustration. No, I will take one more illustration.

At the Standing Rock Reservation, where one man, Major McLaughlin, has been at work for fifteen years, there has been a great advance among the Indians. At Pine Ridge, where, on the contrary, there have been two inefficient agents—one appointed under a Democratic, the other under a Republican, Administration—the latter fled at the time of the troubles in 1890, and called upon the military for assistance. Indeed, the outbreak was produced through just such inefficiency and cowardice, whereas at Standing Rock, where the killing of Sitting Bull took place, the outbreak was controlled by the Indians themselves. If we have a good man in one of these positions, he has great power for good in this transition period. If we have a poor man, it is a great loss. Under the partisan system, even if we replace a good man by a good man, there is loss; for it takes some time to acquire

experience. The present situation is critical, and calls for prompt and discreet action on the part of all friends of the Indian.

President Cleveland expressed his intention of making United States Army officers Indian agents, although this policy had long been practiced in a modified form. I know that the friends of the Indians are divided on the expediency of this measure. But what are the actual facts of the case? If we could have civil-service reform carried out at once in the appointment of agents, it would not be necessary to discuss this question; but we all know what the facts are. If we can have men of high character, of proved ability and experience, we are sure of successful results. We have had some such men selected from the Army as Indian agents. Mr. James told us that out of four military men as agents, whom we met personally, three were doing fine work.

I could mention others—such men as Captain Bullis, Capt. Jesse M. Lee, Captain Beck, Lieutenant Plummer, and Captain Schwan, and many others—par excellence, Captain Pratt. My belief is simply this, that, until we can get the civil-service reform idea carried out practically in Indian affairs, it is better to step as far outside of the partisan plan as possible by securing from the Army educated gentlemen whose record gives every assurance that they will make good agents. As soon as the large number of Republican agents who were put in had been turned out to make way for this new policy, a change took place in the policy of the Administration—a change hard to account for. The Indian Rights Association protested against the removal of good civilian agents, even in order to make room for a good military agent, on the ground that all good agents should be retained. Our views must be made clear on that point. We do not desire to see any worthy civilian put out to make room for an army officer. But I have been informed that there is to be a change, and that army officers are to be removed and civilians put in their places. What does that mean? It would seem to indicate a return to spoils appointments. I would therefore make this plea, that this conference should express to the Administration the earnest hope that this policy of employing army officers as Indian agents shall not be abandoned at present, that no military officer who has proved his efficiency shall be removed, and that no other policy shall be adopted until the policy of civil-service reform shall be brought into the field. Then it matters not whether we have army officers or civilians. Is it not wise to make such a request as that?

Prof. A. D. Morse, of Amherst, Mass., was introduced.

Professor MORSE. I have learned, as a teacher, that the thing which does most to educate is an ideal. The moment we reach Mohonk and come into the presence of our host, and look out upon this beautiful region where he has realized himself, we come under the power of an ideal of character that does us good, that makes us wish to be better, and puts us into a friendly feeling toward all that is good. It gives one a desire to help all that is good. In that way I account for the beginning of the emotions which one feels here. As we go on with the conference, I am conscious of another result, which is of the greatest value. My work is to teach history—American history; and, in my efforts to do that, the thing I chiefly care for is not that the young men who come under my charge shall know when battles occurred and why certain movements took place, but that, when the work is done, they shall go forth into the world better citizens for having studied these things. When I come here, I come under influences that tend to make me a better citizen and help me to give to others the same inspiration. Here we have a large public question dealt with in a large wise way. As we listen to the different speakers and hear the views of one and another, each speaking from a different standpoint, each supplementing and correcting the other, it seems to me that in the end the true view must appear; and I feel that this is the method that prepares for citizenship better than almost any instruction that is given elsewhere. It seems to me that, whatever else is attained, the most valuable result is that we all go away better American citizens as well as better and wiser friends of the Indian.

Rev. Alexander Proudfit, of Baltimore, was introduced.

Dr. PROUDFIT. I would not accept an invitation to speak even for five minutes were it not that I have felt that one or two things ought to be called attention to before we separate. I stand here as a hereditary friend of the Indian. One of the earliest recollections I have is of an Indian woman who, about this time of the year, always came round on her way to the South for the winter. She used to find shelter in my father's house, and therefore my interest in the Indian dates a great way back.

I want now to make two points. I will illustrate the first by a story. Many years ago, when the policy of pushing the Indian westward began, a commissioner went to a certain tribe and said the Government had sent him to confer with them about moving westward. "Let us sit down on this log," said the chief, "and talk it over." Presently the chief moved up against the commissioner, and said, "Move on." They talked a little more about it, and then said the chief, "Move on," again. And so he kept moving him on, until the commissioner sat on the extreme edge of the log. "Move on," said the chief. "I can not," said the commissioner, "I am at

the end of the log." "Well," said the chief, "you come to us Indians, and you say 'move on,' and 'move on,' and 'move on,' until we have come to the ocean on the other side." I fear, from the tone of some remarks which I have heard within the last two days, that some of us have come into the attitude of forgetting that they have rights, too. Let us remember that they were the first inhabitants here, even though they may have seemed to be only cumberers of the soil. In the providence of God we must deal with them righteously. William Penn set an example that should be followed; he never had any trouble with the Indians. Let us not ignore their inherent rights.

Another point, and I am thankful to Mrs. Bullard for raising it, for we need to consider it. General Whittlesey gave us some statistics. They are not always dry bones to me. I like to hear figures. Some one spoke about the denominations having their hands in the United States Treasury. I deny it; that is a false imputation. Many of these denominational schools have received some Government aid in the past. Where would these denominational schools have been if they had not received some Government aid? But we have never had our hands in the Government Treasury. We have been helping the Government; we have been saving Indians; we have been preparing the way for what we are able to do now; we have been receiving aid and giving assistance. There is a glorious future for the Indian. I see the time coming when Christian Indians will be multiplied an hundredfold.

Dr. Henry Hartshorne, of Philadelphia, was asked to speak.

THE AINU OF JAPAN.

[By Dr. Henry Hartshorne.]

Distant as are North America and Japan from each other in space, naturalists tell us that some trees and lesser plants, as well as a number of animals, are the same or very much alike in both. Thus a remote common ancestry is suggested; and the oldest human inhabitants of both show some evidence of kinship, with not unlike remaining conditions which have interest for us at the present time.

When the primeval division of the human family took place from its original center, one wave of migration moved around the north, at a time when probably Bering Strait was not a strait at all, but was continuous land. Of that swarm of men, those who went southward on this continent became, in their descendants, our American Indians. Others, remaining in the colder regions, were progenitors of the North Siberians, Eskimo, and Alaskans. Some found their way southward along the eastern edge of Asia, on the Pacific. Stopped there in their course by the ocean, they peopled the land which geological changes afterwards separated from the continent, making the islands of Japan.¹ These became the Ainu, now left as one of the oldest peoples on the earth.

Later, but still beyond all certain historical record, another race came across to Japan from southern Asia—a race of more active intelligence, aggressive, dominant. These forefathers of the Japanese of to-day drove the Ainu people northward, exterminating many of them on the way. Now only a remnant of them survives in the northern island of Yezo, now called the Hokkaido. About 17,000 of them are there, besides a smaller number on the fag-end of Siberia, called Saghalien, and on the Kurile Islands, which extend from Japan northeast toward Kamchatka.

These Ainu are now a subdued, depressed, perishing race. Once they were warlike, having, like our Indians, tribal wars among themselves. Now they are too helpless under the feet of their conquerors ever to think of war. Always hunters, they are still hunters and fishermen, the bear—our great grizzly and other bears—being to them what the buffalo (bison) has been to our Indians; and brave bear hunters they are.

They do not look like a very inferior race. They are broad shouldered, with large foreheads and fine dark eyes; a hairy race, the men having full beards—in this and in other respects differing from the Japanese. Often handsomer than the latter, they have features more resembling the European type. The missionary, Mr. Batchelor, who has lived among them for eight years, and has translated the New Testament into their language, told me that they are not stupid. They can learn a great deal if they are taught. They are gentle, truthful, reverent. Like our Indians, they believe in one great Creator Spirit, with many subordinate, unseen "gods," or powers of nature. They have no idols, temples, or shrines of idolatry, though they make many simple offerings to their gods. The bear is, in some manner, sacred to them, although they kill it and eat its flesh for food. One most unhappy superstition with them is that they must drink saké—rice beer—in worship of their gods.

¹ Primeval connection of Japan with Asia is made almost certain by facts concerning the *silva* and *flora* of Japan and Manchuria. (See Rein, *Travels and Researches in Japan*.)

In this way drunkenness is common among the men, with ruinous effects. This is their greatest existing curse.

Lately, after ages of oppression and abuse by the Japanese, Christian influence has begun for them and with them an upward movement. There is now an Ainu Improvement Society in Sapporo, the capital of the Hokkaido. Not long before leaving Japan, I was told that twenty Ainu families have recently asked, and had granted to them by the authorities, land in severalty. They have, in consequence, little farms of 12½ acres each, on which they can live. Let us hope that their rescue from extinction may yet be one of the triumphs of Christianity.

Mr. PHILIP C. GARRETT. The business committee has directed me to report several resolutions, apart from the platform, which will be offered for adoption by the conference. These are resolutions which have been referred to the business committee.

“Resolved, That it be referred to a committee to be appointed by the chair to inquire whether any adequate official compilation of the laws and decisions affecting Indians exists suitable to aid the duties of judges, attorneys, commissioners, and Indian agents, and to report whether anything further would be useful to that purpose.”

“Resolved, That the same committee be requested to arrange for the preparation of a short code of laws for Alaska, or to report on the expediency and the method of procuring such a code.”

On motion this resolution was adopted.

“Resolved, That a committee of five be appointed by the chair to consider and report what legislation is necessary to effectuate the foregoing resolution.”

“Resolved, That said committee shall ascertain what rules and regulations, if any, have been adopted by the Secretary of the Interior under and pursuant to the authority conferred on him under the recent act of Congress in reference to selling and leasing Indian lands, with power to recommend to him such revision, alteration, or additions as said committee may deem advisable.”

“Resolved, That the alienation by sale or otherwise of lands held in severalty by Indians should be regulated and governed, as far as practicable, by the same rules and principles that are applicable to the alienation of lands held by whites under age, and not otherwise.”

On motion this resolution was adopted.

“Resolved, We urge upon Congress the necessity of such legislation as shall secure to Mr. Duncan and his colonists on Annette Island in Alaska the benefits of a town-site law so framed as to secure to them each a title to the land upon such town site as shall be adapted to their present circumstances, and without impairing their rights of possession in the island under existing laws.”

Adopted.

The platform was then read, and after an hour's discussion, during which some verbal changes were made, it was, on motion, adopted seriatim and as a whole. It is as follows:

THE MOHONK PLATFORM.

The Mohonk Conference has now completed twelve years of work in the Indian reform. In this period a large advance has been made. The interest of the nation in the condition of the Indian has been greatly increased. Legislation has been secured of great value, culminating in the severalty law, the happy result of which will be to break up the reservation system and make the Indian a citizen. Great principles have been established. This conference regards it as settled that the Indian is to be treated as a man, and ought to be put on the footing of other men. The unfortunate relation which he has held as a ward of the nation is a relation which is incompatible with his manhood, and should be brought to an end as soon as possible.

We believe the Indian has all the natural qualifications necessary for his education, civilization, and Christianization; and we are satisfied that, while we must be careful not to deprive him of his rights, we must be equally careful not to pauperize nor enervate him by undue paternalism.

New needs are constantly arising; and there is undoubtedly work still for all friends of the Indian in carrying out the principles already established to their logical results.

We find that, in the actual condition of the Indian, much yet remains to be done to secure him his rights, and to give him a proper place in the land as a man, a citizen, and a brother.

The widespread corruption existing in the Indian Territory, as the result of its present autonomous reservation system, should excite alarm and indignation in the minds of all good citizens. We earnestly hope that the measures now being taken by the Government to induce the Five Civilized Tribes to take land in severalty and exchange their tribal governments for a Territorial government may prove successful.

Recent laws permitting Indians to lease their lands are widely resulting in dispossessing ignorant Indians of their property rights, without an adequate return, to

their great disadvantage and the enriching of designing white men. We recommend, therefore, that the law be so modified as to render it possible for Indians to sell or lease their lands only by permission of a judge of the United States district court, upon the same principles which protect the lands of minor heirs among the whites from alienation.

We regard it as of the utmost importance that the Indian be encouraged to support himself and his family by work. On this account we depreciate present conditions tending to make the Indian a pauper, such as issuing rations and annuities, and the lack of work and of markets for Indian productions. We commend the efforts of organizations and of individuals to provide work and markets, and we believe that rations and annuities should be discontinued as rapidly as proper equivalents can be provided.

We reiterate the affirmation of our platform of 1893, that, from funds now held by the United States or hereafter created for the benefit of the Indians, provision should be made by law for their fair share of the expense of local improvement and taxes, that these burdens may not rest unjustly on the communities and States which include in their territory the lands of Indians who hold under a protected title and are exempt from taxation.

We are glad to learn that the Secretary of the Interior has expressed his purpose to suggest to Congress at the coming session the passage of an act to define the duties, powers, and duration of office of the superintendent of Indian schools, thereby removing the office from the crippling influence of the spoils system, and securing men of the highest educational ability. Such a law would tend to place the Indian schools in a condition of efficiency equal to that of the best public schools in the land. The salary of this office should be commensurate with its importance. We regret that it has been recently reduced to a point wholly inadequate.

The severalty law, and other reforms inaugurated for the benefit of the Indians, are effective chiefly as they are executed by fit men. It is of the utmost importance at this juncture that Indian and allotting agents be men of stanch integrity and high character. Their tenure of office should not be subject to political changes. We therefore urge, in order that the best men possible be secured, that larger salaries be paid, and that the administration select these agents, in accordance with the spirit of the civil-service law, for their fitness only.

We further respectfully urge the President of the United States to extend by Executive order the operation of the civil-service law to the positions of disciplinarian, assistant matron, farmer, and industrial teacher, in the Indian service; also, that agents' clerks and those of bonded superintendents of schools should be selected by the agents and superintendents themselves.

Our attention has been called to the needs of Alaska. This part of our country is peculiarly endangered from the introduction of intoxicating liquors among the Indians. We earnestly hope that the Government will appropriate a larger sum for the enforcement of law. A further appropriation is also essential to provide the natives with reindeer. We also urge larger appropriations for schools, and we recommend that the advantage of appropriations for agricultural stations be extended to Alaska as to the other Territories.

Indian matters are now in a period of transition. The operation of the severalty law is steadily breaking up the reservation system and scattering Indians on individual holdings. The Indians are rapidly becoming citizens, with local rights and duties. In view of these facts some of the Indian agencies should now be discontinued, the district-school system should be introduced as rapidly as possible, and the time is coming when the Indian Bureau, as a distinct department of Government, may well be abolished, and the education of the Indian be placed where it naturally belongs in connection with the Bureau of Education, until it shall ultimately be relegated to the individual States. This conference unhesitatingly disapproves the continuance of all appropriation of public moneys for sectarian schools for the Indians, and it rejoices that several denominations have withdrawn their requests for such appropriations; and it earnestly expresses the hope that all other religious bodies now receiving aid will follow this example, and so affirm the distinctively American principle of separation between church and state. We strongly urge the religious denominations of this country thus released from the demands of the secular education of Indian youth to redouble their efforts in distinctively religious and moral work on behalf of the Indians.

To recapitulate, we ask:

- (1) That the Five Civilized Tribes of the Indian Territory be persuaded to accept a Territorial government.
- (2) That the laws be modified so as to render it possible for Indians to sell or lease their lands only by permission of a judge of the United States district court.
- (3) That, as far as possible, work and markets be provided for Indians by organizations and individuals, and that rations and annuities be stopped as rapidly as a proper equivalent is provided.

(4) That provision be made by law for meeting, from Indian funds, the expenses of local improvements and taxes which would naturally fall on Indians now made untaxable by law.

(5) That the duties, powers, and duration of office of the superintendent of Indian schools be defined by law, and his salary be made adequate.

(6) That the spirit of the civil-service reform should be applied in the appointment of Indian agents as well as other officials.

(7) That larger appropriations be made to enforce law in Alaska, and also to provide reindeer for the natives.

(8) That the work of transition be expedited by discontinuing some of the Indian agencies and introducing the district-school system among the Indians; while we look forward to the eventual abolition of the Indian Bureau and the relegation of Indian schools to the care of the individual States.

(9) That all religious bodies now receiving Government aid for contract schools follow the example of other denominations in withdrawing their request for such aid.

(10) That the religious bodies redouble their efforts in distinctively religious and moral work on behalf of the Indians.

After the adoption of the platform, on motion of Judge Arnoux, it was voted that the chair should appoint a committee to wait on the President of the United States, and present to him a copy of the platform, and call his attention to its several features.

The committee was afterwards appointed as follows: Gen. John Eaton, Dr. Lyman Abbott, Mr. Herbert Welsh, Dr. Lucien Warner, and Prof. C. C. Painter.

The committee on changes in Indian laws was appointed as follows: Austin Abbott, Justice William Strong, Hon. Philip C. Garrett, Hon. Darwin R. James, and Judge Arnoux.

On motion it was voted that Mrs. Isabel C. Barrows and Mr. Frank Wood, of Boston, should constitute a publication committee.

The business committee announced that Miss Kate Foote, of Washington, would speak.

MISS KATE FOOTE. We are about three hundred guests in the hotel this week, the majority of whom are invited here by Mr. Smiley. We all feel a deep sense of the favors extended to us, and I have been requested by the business committee to draw up a resolution which should be hard and soft, long and short, which should have no flattery in it, and yet should express the feelings of three hundred people for the time we are here. I have endeavored to do that. You will remark that the resolution is a solid little chunk in the middle, and I have to make remarks before it and after it, and then our president will read the resolution for your action.

"The Twelfth Annual Conference comes to its close—golden, glowing, glorious in the matter of weather, of open fires, and the hospitality of our hosts, Mr. and Mrs. Smiley. We can not include the clerk of the weather in our vote of thanks, because his office is beyond our reach; but we can think of him with gratitude as we remember how the clouds rolled away on Wednesday afternoon, and we were able to see how Mr. Smiley holds an elevated position in the world, and likes to draw others up to the same plane with himself. Therefore

"*Resolved*, That we desire, as we think of the hospitality that has been given us, to thank our host and hostess—to say how comfortable we have been made, and that we appreciate the manner in which we have been ministered to, both mentally and physically, so that we go away full fed both in our inner and outer man."

Is that a sufficiently bald, unfulsome statement of the fact that we have been entertained like princes, and that the only thing we have listened to with sorrow is that Mr. Smiley was obliged by vote, in the early days of the conference, to limit the meeting to three days, instead of giving it the week he desired?

The resolution was seconded in a witty speech by Mr. W. H. McElroy, of New York, who expressed the warmest feelings of gratitude on behalf of the conference to Mr. and Mrs. Smiley.

DR. CUYLER. Mohonk is an irresistible magnetic mountain. It is a very favorite resort with me, and I do love that man (Mr. Smiley) as if I were his very twin brother. And it is sweet and delightful to have two or three days of fellowship with the choice spirits that gather round this council board. "Many are called, few are choice;" that is the right reading of that passage. I do not believe that in our land there are any more thoroughly unselfish hearts than throb together here right around this table. Bear in mind that you gather here simply as the executors of the Lord Jesus Christ, to act in reference to that legacy which he has committed to you, of those far-away, vanishing children of his out yonder on the plains and prairies. The Indian gives you no retainer. No Indian voice has ever yet been heard in the halls¹ of Congress, and the political bearing of the Indian vote weighs

¹ In this short address I say that "no Indian voice has been heard in Congress." Mr. Curtis, of Kansas, had an Indian mother; but his father was a white man. So he is not really an Indian, in the proper sense of the word.—T. L. C.

less than nothing. Yet here you come, beloved ones, year after year, just to put up a lightning-rod towards heaven, to avert the righteous vengeance of Almighty God for the wrongs and humiliations and outrages exercised on his children. That is what calls you here. And the reward comes from Him who saith, "Inasmuch as you do it to these my poor, tawny-faced children, you do it unto me." And so, beloved friends, in God's name I bless you with such benediction as I can give you.

Seventy-eight years ago, in the valley of the Mohawk, my father helped to bear a part in the funeral of Skenandoa, a famous Oneida chief, who was known as the "white man's friend." The boot was on the other leg then. It was the white man that needed the Indian as his friend; and it was old Skenandoa who uttered that exquisite bit of eloquence by the council fire when he said, "I am an aged hemlock. The winds of nearly a hundred winters have whistled through my branches, and I am dead at the top." My native county of Cayuga contains the only monument ever reared on American soil to an Indian.¹ In that cemetery of Auburn, a few yards from the grave of William H. Seward, is a tablet on a monument, "Who mourns for Logan?" Not one. My native county has erected a solid obelisk in memory of the man who was also "the white man's friend."

As I look at these blessed white heads and at that grand old Senator to whom the red men of the land would build a monument if they had the opportunity to do it, I say to you, "Come back again, come back again every year, brethren, friends of the Indian and of Jesus Christ." Don't go home, Whittlesey, for I feel about you as old Father Taylor did when he was brought near heaven, and was worrying a little on his dying bed, and some one said to him, "Don't you be worried; you will soon be among the angels." "What do I care for that?" said the old man, "I would a great deal rather be here among folks." And so, good friends, let us not be in a hurry to go there. It is good to stay down here among folks, such folks as our beloved brother Smiley welcomes with his great heart to his hospitable hearthstone year after year. So let our hearts throb together as we say good night.

Miss Foote's resolution was then unanimously passed.

Mr. A. K. SMILEY. I thank you most cordially for your kind words, but especially do I thank you for coming here. I hope that you may come year after year until this whole Indian question is settled, until all the Indians have their full rights, as we have. I propose to keep up these conferences so long as I live, and, if I am taken away, they will be continued after me until the Indians are put on a firm, solid basis.

Sometimes I take command of this house, and I propose to do it now. I think that the gentleman who has so successfully presided over you is entitled to our warmest thanks, and also that business committee who have kept at work so many hours to make this conference a success is also entitled to thanks, to our gratitude. I would move, therefore, that the thanks of the conference be given to the president, to the business committee, and to the secretaries.

The motion was put by the Rev. Dr. McArthur and was unanimously carried.

The president acknowledged the courtesy in a few words, and the evening's exercises were closed by the recitation by Miss Edna Dean Proctor of a poem called *The Captive's Hymn*, written by herself upon an incident that occurred at the close of the French war, about 1764.

The conference adjourned sine die, after the singing of "God be with us till we meet again," and the benediction.

¹ With reference to monuments to Indians the editor has collected the following facts:

On the council-house grounds at Glen Iris there is a monument to Mary Jemison, a white woman, who was captured by the Indians when she was a little girl, and adopted by them. She was twice married, each time to an Indian chief. Her home was on the Gardeau Reservation, a tract of 17,927 acres, which was deeded to her by the Indians in 1797.

There is a monument to Logan (Tah-goh-jute) in the cemetery at Auburn, Cayuga County, N. Y., a plain, pyramidal shaft of rough stone.

In 1891 a monument was erected to Red Jacket (So-go-ya-wat-ha) at Canoga, Seneca County, N. Y., which is claimed to be his birthplace. A monument was also recently erected to Red Jacket in Forest Lawn Cemetery, Buffalo, about which lie his remains and those of five other Indian chiefs.

LIST OF MEMBERS.

- Abbott, Mr. and Mrs. Austin, 16 East Sixty-fourth street, New York City.
 Abbott, Rev. Dr. Lyman, editor Outlook, New York City, and Mrs. Lyman, 110 Columbia Heights, Brooklyn, N. Y.
 Arbuckle, John, 315 Clinton avenue, Brooklyn, N. Y.
 Armstrong, Miss, Hampton, Va.
 Arnoux, Hon. and Mrs. William H., 110 Madison avenue, New York City.
 Atterbury, Rev. W. W., 27 West Thirty-eighth street, New York City.
 Austin, Mrs. L., 891 Prospect street, Cincinnati, Ohio.
 Avery, Miss Myra H., 137 Academy street, Poughkeepsie, N. Y.
 Avery, Mr. and Mrs. Samuel P., 4 East Thirty-eighth street, New York City.
 Avery, Miss, 4 East Thirty-eighth street, New York City.
 Bailey, Mrs. Hannah J., superintendent World's and National W. C. T. U., Department Peace and Arbitration, Winthrop Center, Me.
 Barrows, Mrs. Isabel C., Christian Register, Boston, Mass.
 Beard, Rev. Dr. A. F., corresponding secretary American Missionary Association, Bible House, New York City.
